The Changing Body

Humans have become much taller and heavier, and experience healthier and longer lives than ever before in human history. However, it is only recently that historians, economists, human biologists, and demographers have linked the changing size, shape, and capability of the human body to economic and demographic change. This fascinating and groundbreaking book presents an accessible introduction to the field of anthropometric history, surveying the causes and consequences of changes in health and mortality, diet, and the disease environment in Europe and the United States since 1700. It examines how we define and measure health and nutrition as well as key issues such as whether increased longevity contributes to greater productivity or, instead, imposes burdens on society through the higher costs of health care and pensions. The result is a major contribution to economic and social history with important implications for today’s developing world and the health trends of the future.

Sir Roderick Floud is Provost of Gresham College, London. He is editor of *The Cambridge Economic History of Modern Britain* (Cambridge 2004) and has published many books on British economic history including *Height, Health and History: Nutritional Status in the United Kingdom, 1750–1980* (with Kenneth Wachter and Annabel Gregory, Cambridge 1990). He is a research associate at the National Bureau of Economic Research, and has received a knighthood for services to higher education.

Robert William Fogel is a professor of economics and the Charles R. Walgreen Distinguished Service Professor of American Institutions at the University of Chicago Booth School of Business, where he is Director of the Center for Population Economics. His many published titles include *The Escape from Hunger and Premature Death, 1700–2100: Europe, America, and the Third World* (Cambridge 2004). He is a research associate at the National Bureau of Economic Research, and received the Nobel Prize in Economics in 1993.

SOK CHUL HONG is Assistant Professor of Economics at Sogang University, South Korea. His current research focuses on the innovation of medical and environmental technologies and their impact on human development from a long-term perspective.
NEW APPROACHES TO ECONOMIC AND SOCIAL HISTORY

SERIES EDITORS
Nigel Goose, University of Hertfordshire
Larry Neal, University of Illinois, Urbana-Champaign

New Approaches to Economic and Social History is an important new textbook series published in association with the Economic History Society. It provides concise but authoritative surveys of major themes and issues in world economic and social history from the post-Roman recovery to the present day. Books in the series are by recognized authorities operating at the cutting edge of their field with an ability to write clearly and succinctly. The series consists principally of single-author works – academically rigorous and groundbreaking – which offer comprehensive, analytical guides at a length and level accessible to advanced school students and undergraduate historians and economists.

William W. Lewis, Committee for Economic Development
Relation of the Directors to the Work and Publications of the NBER

1. The object of the NBER is to ascertain and present to the economics profession, and to the public more generally, important economic facts and their interpretation in a scientific manner without policy recommendations. The Board of Directors is charged with the responsibility of ensuring that the work of the NBER is carried on in strict conformity with this object.

2. The President shall establish an internal review process to ensure that book manuscripts proposed for publication DO NOT contain policy recommendations. This shall apply both to the proceedings of conferences and to manuscripts by a single author or by one or more co-authors but shall not apply to authors of comments at NBER conferences who are not NBER affiliates.

3. No book manuscript reporting research shall be published by the NBER until the President has sent to each member of the Board a notice that a manuscript is recommended for publication and that in the President’s opinion it is suitable for publication in accordance with the above principles of the NBER. Such notification will include a table of contents and an abstract or summary of the manuscript’s content, a list of contributors if applicable, and a response form for use by Directors who desire a copy of the manuscript for review. Each manuscript shall contain a summary drawing attention to the nature and treatment of the problem studied and the main conclusions reached.

4. No volume shall be published until forty-five days have elapsed from the above notification of intention to publish it. During this period a copy shall be sent to any Director requesting it, and if any Director objects to publication on the grounds that the manuscript contains policy recommendations, the objection will be presented to the author(s) or editor(s). In case of dispute, all members of the Board shall be notified, and the President shall appoint an ad hoc committee of the Board to decide the matter; thirty days additional shall be granted for this purpose.

5. The President shall present annually to the Board a report describing the internal manuscript review process, any objections made by Directors before publication or by anyone after publication, any disputes about such matters, and how they were handled.

6. Publications of the NBER issued for informational purposes concerning the work of the Bureau, or issued to inform the public of the activities at the Bureau, including but not limited to the NBER Digest and Reporter, shall be consistent with the object stated in paragraph 1. They shall contain a specific disclaimer noting that they have not passed through the review procedures required in this resolution. The Executive Committee of the Board is charged with the review of all such publications from time to time.

7. NBER working papers and manuscripts distributed on the Bureau’s web site are not deemed to be publications for the purpose of this resolution, but they...
shall be consistent with the object stated in paragraph 1. Working papers shall contain a specific disclaimer noting that they have not passed through the review procedures required in this resolution. The NBER’s website shall contain a similar disclaimer. The President shall establish an internal review process to ensure that the working papers and the website do not contain policy recommendations, and shall report annually to the Board on this process and any concerns raised in connection with it.

8. Unless otherwise determined by the Board or exempted by the terms of paragraphs 6 and 7, a copy of this resolution shall be printed in each NBER publication as described in paragraph 2 above.
The Changing Body

Health, Nutrition, and Human Development in the Western World since 1700

5.4 Heights of boys in Greece, Hungary, Norway, and Spain, 1914–1997
5.5 Heights of boys in Italy and Slovenia, 1939–1997
5.6 Heights of boys in Croatia, the Czech Republic, France, and Poland, 1950–1997
5.7 Heights of girls in Germany, Sweden, and the Netherlands, 1865–1997
5.8 Heights of girls in Greece, Hungary, and Norway, 1914–1997
5.9 Heights of girls in Italy and Slovenia, 1939–1997
5.10 Heights of girls in Croatia, the Czech Republic, France, and Poland, 1950–1997
5.11 Increases in the average heights of European adults (cm per decade)
5.12 Life expectancy in western Europe, 1741–1900
5.13 Life expectancy in western Europe, 1901–2000
5.14 Life expectancy in central and eastern Europe, 1951–2000
5.15 Cohort-specific mortality in Denmark, 1870–1949
5.16 Cohort-specific mortality in Finland, 1890–1949
5.17 Cohort-specific mortality in Germany (West), 1875–1954
5.18 Cohort-specific mortality in Iceland, 1870–1949
5.19 Cohort-specific mortality in the Netherlands, 1860–1949
5.20 Cohort-specific mortality in Norway, 1880–1949
5.21 Cohort-specific mortality in Switzerland, 1880–1949
5.22 Cohort-specific mortality among Danish males, 1870–1949
5.23 Cohort-specific mortality among Danish females, 1870–1949
5.24 Real wages in selected European countries, 1900–1993
5.25 Percentage of the population of selected European countries residing in towns and cities containing more than 10,000 inhabitants
5.26 Number of person-years in each age group, by birth cohort: Sweden, 1751–1912
5.27 Life expectancy at age 65 in selected European countries, 1950–2000
List of figures

6.1 Trends in adult height, life expectancy, and real GDP per capita since 1700 299
6.2 Estimated annual probability of contracting intermittent and remittent fevers by county in the 1850s 323
6.3 Preliminary findings on trends in disparities in infant death rates of the wards of six large US cities, 1900–1950 328
6.4 The relevance of adult height of native-born males to daily caloric intake per capita and infant mortality rate around birth year, 1800–1980 333
6.5 The relevance of average BMI of white males at ages 40 to 59 to daily caloric intake per capita, infant mortality rate, and working hours in the examination year, 1870–2000 337
6.6 Perinatal mortality by birth weight 339
6.7 Trends in average birth weight and proportion of low-birthweight (< 2,500 g) babies, white population and black population 340
6.8 Comparison of relative and absolute mortality risk by height and BMI at ages 40–59, modern American non-Hispanic white males and Union Army veterans 341
6.9 Shift of BMI distribution and optimal BMI level, modern American non-Hispanic white males and Union Army veterans 343
6.10 Relative morbidity risk by BMI among Union Army veterans at ages 40–59 and relative risk of activity limitation by BMI among modern American non-Hispanic white males at ages 40–59 346
6.11 Comparison of relative risk of low economic productivity (non labor force participation and poverty) by BMI and relative wealth and earnings by height, modern non-Hispanic white American males and Union Army veterans 348
6.12 US trend of economic inequality 349
6.13 US trend in labor force participation rate by age group, 1890–2005 351
6.15 US trends in national health expenditure and distribution of elderly population 357

2.8 A scenario for the highest decile ⏤ 74

2.9 Alternative scenarios for Voth’s work year ⏤ 76

3.1 Average calories available for daily consumption in England and Wales and annual growth rates of daily caloric consumption and population, 1700–1850 ⏤ 99

3.2 Income elasticities of the demand for calories in eight nations (computed from time-series data) ⏤ 105

3.3 Three alternative distributions of the daily French consumption of calories per consuming unit circa 1705 ⏤ 109
3.4 The distribution of PAL among French adult males circa 1705 110
3.5 Caloric Productivity Ratio in France c. 1785 and 1705 114
3.6 Caloric Productivity Ratio in England and Wales in 1700 and 1800 120
4.1 Changes in the body mass index of British schoolchildren, 1905–2007 142
4.2 Changes in the height, weight, and body mass index of regular army recruits, 1860/4–1970/4 144
4.3 Infant mortality rates, both sexes, by father’s social class, in England and Wales, 1930/2–2001 150
4.4 Social class variations in expectation of life at different ages, 1972–1991 151
4.5 Agricultural output, in millions of bushels, in England and Wales, 1700–1850 155
4.6 Average number of calories per head per day derived from domestically produced cereals and pulses in England and Wales, 1700–1850 156
4.7 Average number of calories available for consumption per capita per day from domestically produced food sources in England and Wales, 1700–1909/13 156
4.8 Average number of calories available for consumption per capita per day from imported food sources in England and Wales, 1700–1909/13 159
4.9 Average number of calories available for consumption per capita per day in England and Wales, 1700–1909/13 160
4.10 Sources of calories, by food group, in England and Wales, 1700–1909/13 161
4.11 Changes in the composition of working-class diets, 1899–2000 164
4.12 Conversion factors for estimating calories per consuming unit in England and Wales, 1700–1909/13 166
4.13 Calories per consuming unit in England and Wales, 1700–1909/13 167
4.14 Calories required for different types of work, 1800–1914 169
4.15 England and Wales: relative mortalities 178
4.16 Percentage of patients who consulted their general practitioners, 1995/6–1991/2 186
### List of tables

| D.1 | Changes in the average height, weight, and body mass index of British schoolchildren, 1905–2007 | 195 |
| D.2 | Energy derived from domestically produced cereals and pulses, 1700–1850 (based on crop yields estimated by Chartres, Holderness, and Allen) | 205 |
| D.3 | Energy derived from domestically produced cereals and pulses, 1700–1850 (based on crop yields estimated by Turner, Beckett, and Afton) | 208 |
| D.4 | Energy derived from domestically farmed animals | 210 |
| D.5 | Energy derived from domestically produced dairy products | 211 |
| D.6 | Energy derived from imported cereals and pulses | 212 |
| D.7 | Energy derived from imported meat | 217 |
| D.8 | Energy derived from imported dairy products | 217 |
| D.9 | Energy derived from retained sugar imports | 217 |
| D.10 | Wine and spirits | 218 |
| D.11 | Energy derived from fish | 218 |
| D.12 | Energy derived from garden vegetables | 219 |
| D.13 | Energy derived from imported fruit and nuts, 1850 | 219 |
| D.14 | Energy derived from fruit and nuts, 1909–1913 | 220 |
| D.15 | Energy derived from potatoes | 221 |
| D.16 | Energy derived from domestically produced and imported foods, 1909–1913 | 222 |
| 5.1 | Average life expectancy at birth, for both sexes, in selected European countries, 1741–2000 | 244 |
| 5.2 | Differences between life expectancy rates for males and females in selected European countries, 1751–2000 | 250 |
| 5.3 | Construction workers’ welfare ratios, 1701–1913 | 260 |
| 5.4 | Gross domestic product per capita (1990 international Geary–Khamis dollars) | 264 |
| 5.5 | Daily calorie consumption per head in western Europe, 1800–1960 | 267 |
| 5.6 | The starchy staples as a percentage of all calories per capita per day | 268 |
| 5.7 | Housing conditions in Europe, 1900–1975 | 270 |
| 5.8 | Number of years lived between the age of 15 and 44 in three Swedish birth cohorts | 280 |
| 5.9 | Number of years lived at each age for both sexes, Sweden, 1751–1912 | 281 |
5.10 The impact of changes in health on changes in GDP per capita 283
5.11 Prevalence of disability in three birth cohorts aged 75–79 over twenty years 288
E.1 Height, weight, and BMI of children in selected European countries, 1865–1997 290
6.1 Average annual allowances of grains and meat for widows in Middlesex County, Massachusetts, 1654–1799 303
6.2 American trends of population, migration, and urbanization, 1710–1980 305
6.3 Annual production and price of major crops in the United States, 1800–1920 307
6.4 Annual production and price of meat products in the United States, 1800–1920 310
6.5 Annual production and price of eggs, dairy products, vegetables, and fruits in the United States, 1800–1920 312
6.6 Estimated daily caloric intake per capita, 1800–2004 314
6.7 Work level and productivity in the United States, 1800–2000 319
6.8 Summary of vital statistics, 1850–2000 322
6.9 Disparity in infant mortality rate among wards of selected US large cities, 1890–1930 329
6.10 Height by sex and race, 1760–1980 331
6.12 US trends in consumption and daily time use 352
6.14 Health disparities by sex, race, and income among Americans at ages 20–64 in 1997–2006 359
F.1 Computing the factor to convert caloric consumption per capita to caloric consumption per equivalent adult male in the United States, 1830 362
F.2 The distribution of PAL among American adult males circa 1800 363
Acknowledgements

This book has been long in gestation and we have therefore benefited from the support of a number of institutions and from the comments of many scholars at seminars and conferences in a number of countries. Much of the research which is reported stems from findings from the program project “Early Indicators of Later Work Levels, Disease, and Death,” which is funded by grants from the National Institute on Aging, the National Science Foundation, the National Institutes of Health (grant no. P01 AG010120), the Walgreen Foundation, the National Bureau of Economic Research, and the University of Chicago. Other research has been supported by the Economic and Social Research Council (grant no. G00428325035), by the National Institute of Ageing (grant no. P30 AG-12857-08), London Metropolitan University, the School of Advanced Study of the University of London, the European Science Foundation, Gresham College, the University of Southampton, and Sogang University.

Trussell, Athina Vlachantoni, Kenneth Wachter, Lawrence Weaver, Sven E. Wilson, Larry T. Wimmer, Len Winokur, and Tony Wrigley. Marilyn Coopersmith, Katherine A. Chavigny, and Susan E. Jones prepared and edited early drafts of some chapters. Lewis Meineke assisted with research and with verifying calculations in Chapters 2 and 3. Nathaniel Grotte has given invaluable help in preparation of the final text.

Our co-authors have, perhaps, been our sternest critics and we acknowledge, finally, the pleasure and intellectual profit which we have gained from our collaboration.
