a- and *b*-values of Gutenberg–Richter law, 205, 240, 243
adiabatic elastic constants, 10
aftershocks of earthquake, 206, 235, 236
aging law, 21
Amontons' law, 17
angular frequency, 11
anisotropy
  anisotropic elastic media, 8, 10, 11, 43, 65
  anisotropic poroelastic media, 140
  anisotropy parameters, elastic, 43
anisotropy of hydraulic diffusivity, hydraulic anisotropy, 124, 134, 153, 154, 162
apparent Gutenberg–Richter distribution, 245
apparent hydraulic diffusivity, 172
aspect ratio, 104
attenuation coefficient, 71, 139
average confining normal stress, 58

b-value, 215, 222, 240, 243
back front of induced seismicity, 148, 152, 162, 168, 172, 175
back front of seismicity, x, 147, 177
Barnett Shale case study, 177, 178, 208
Basel case study, 208, 221, 225
biharmonic equation, 14
Biot modulus, 58
Biot–Willis coefficient, 58, 110, 184
borehole fluid injections, x
bottom hole pressure, 157, 165
Boussinesq equation, 187, 188
brittle failure, 14, 20, 124
brittle–ductile transition zone, 119
Brown–Korringa equation, 61
bulk compressibility
  of grain material, 57
  of drained rocks, skeleton, 57, 104, 109
  of fluid, 56, 177
  of rock, 9, 60, 103
bulk modulus
  of grain material, 58
  of skeleton, 58, 61
  of undrained material, 59, 61
  of rock, 9, 61, 105, 106, 108

characteristic frequency of global flow, 68, 69
characteristic frequency of Poiseuille flow, 64, 69
characteristic magnitude, 239
Christoffel equation, 11
coefficient of internal friction, 17, 20
cohesion, 18
compatibility equations, 2
completeness magnitude, 208, 209
compliance tensor, 5, 6, 51–53, 57, 103
compliance tensor of undrained rock, 60
compliant porosity, 103–105, 111, 115
complimentary error function, 85
compressional tectonic regime, 100
compressive stress, 4, 100
confining pressure, 51, 61
confining stress, 49–60, 102, 113
connected porosity, 49, 114–116
conservation of the fluid mass, 63, 183, 203
continuity equation, 63, 76, 143, 183
contracted notation, 6, 60
Cooper Basin case study, 208, 211
corner frequency, 35
Cotton Valley case study, 169
crack-surface displacement, 25
critical crack length, 24
critical pore pressure; criticality, 129, 150–152, 159
critical pore-pressure perturbation, 123
critical stress, 24
criticality of rocks, 150, 154, 155
crustal faults, 124
crystalline rocks, 118, 154

Darcy's law, 63, 76, 184, 200

decay rate of seismicity, 206
deformation, 1–4, 9, 10, 54, 56, 60, 63, 90
deformation of undrained rock, 90
differential isochrone, 42
differential pressure, 103, 104, 108, 114
differential stress, 17, 119
diffusion
  equation, 74–81, 84–88, 126, 144, 151, 153, 159
  equation, non-linear, 196
  front, 199
  wave, 70, 74, 128, 138
diffusivity matrix, 136
diffusivity, hydraulic
  exponential, 190–192
  of fracture, 177
  of rocks, 70, 75, 126, 128, 130, 134, 143, 144, 149, 151, 152, 161, 166, 172, 177, 185, 189, 212
  power law, 182–185
  principal components, tensor, 136
  tensor, 134, 135, 141, 154, 155, 157, 161, 162, 196
dilatation, 8, 14, 58, 63, 65, 113
dilatational waves, 65–74
dimensional analysis, 186, 190
dip, fault plane, 29
Dirac function, 12
directivity effect, rupture propagation, 35
Dirichlet boundary condition, 190
dispersion equation, 11, 68
displacement, 1, 10, 13, 14, 49–51, 53, 62–64, 66, 67, 71, 74, 77, 80, 82–86, 90, 92, 93
double couple, 32
double-dot product, 5, 8, 58, 61
dynamic features of induced seismicity, 159
dynamic friction coefficient, 21
dynamic viscosity, 63

earthquake amplitude spectrum, 35
earthquakes, 14
effective diffusivity, 143, 145, 190, 195
effective medium, 105, 107, 143, 154
effective normal stress, 124
effective permeability, 144, 177
effective stress, 18, 50, 52, 54, 58, 103, 133
effective-stress coefficient, 57, 103, 113–115
effective-stress coefficient for porosity, 103
effective-medium theory, 105
eikonal equation, 138–143, 146
elastic anisotropy, 10, 126
elastic body, 2
elastic compliances, 5, 7, 48
elastic deformations, 2
elastic forces, 2–4, 10, 64, 73
elastic moduli, 6, 8, 108–110
elastic piezo-sensitivity, 109
elastic stiffnesses, 5, 7, 8
elastic strain energy, 5, 6
elastic waves, 10–13, 30–35, 65, 73, 125
ergodicity assumption, 147, 150
error function, 85
Eulerian formulation, 2
event probability, 159, 203, 231, 258
event rate, 159, 203, 206, 220, 258
event-location error, 160
exponential diffusion, 190–194
extensional tectonic regime, 100
external surface of a porous sample, 49, 51–53

factorized anisotropy and non-linearity, 197
failure criterion stress, FCS, 20, 99, 124, 131
far field, 13, 33, 92
far-field approximation of Green's function, 33
fault plane, 16, 17, 20, 29
fault system, 120, 122
fault-displacement vector, 28
fault-guided induced seismicity, 122
Fenton Hill case study, 157
Fermat's principle, 140
filtration velocity, 62–64, 144, 166, 184, 200
filtration, non-steady-state, 146
fluid flow, 73
fluid incompressible, 165
fluid viscosity, 63, 64, 126, 136, 177
fluid-loss coefficient, 166, 172, 173, 176
fluid-mass conservation, 63, 186, 203
fluid-mass diffusion, 74
fluid-mass dipole, 82
focal mechanisms, 36
foot wall, fault, 27, 28
fractal, 238, 239
fracture closure pressure, 165
fracture toughness, 26
Frenkel–Biot equations, 124, 125
Frenkel–Biot slow wave, ix
friction angle, 19, 20, 131
friction coefficient, 17–20, 234
  coefficient of internal friction, 17

gas shale, 166, 177–179, 244
Gassmann equation, 61, 103
geometric non-linearity, 101
geometrical spreading, 131, 133
geometrical-optics approximation, 138, 142, 143
geothermal site, 154, 209, 219, 253
geothermal system, 89, 154, 180, 219, 242, 244
German Continental Deep Borehole, KTB, *see* KTB
global flow, 62, 68, 73, 76
grain material, 49, 50, 53, 56–61, 102, 110, 111
Green's function, 12, 13, 31, 81, 83, 84, 148
Griffith's failure criterion, 22, 23, 26
group velocity, 12
Gutenberg–Richter law, 216, 222, 224, 227, 238, 240, 242, 244
Gutenberg–Richter statistics, 205, 230

hanging wall, fault, 28
harmonic function, 14
