Do marijuana users cut back on consumption when the price rises? To what degree is marijuana consumption related to drinking and tobacco usage? What would happen if marijuana were legalised and taxed in the same way as alcohol and tobacco? Is marijuana priced in a similar way to other goods?

_Economics and Marijuana_ deals with these and other questions by drawing on a rich set of data concerning the consumption and pricing of marijuana in Australia, a country where the drug has been decriminalised in some, but not all, states. The book applies the economic approach to drugs to analyse consumption, pricing and the economics of legalising the use of marijuana. The result is a fascinating analysis of this widely used, but little understood, illicit drug that provides much needed information and policy advice for a wide range of readers, including economists, policy makers and health professionals.

Kenneth W. Clements is Winthrop Professor of Economics at the University of Western Australia Business School, Perth.

Xueyan Zhao is Associate Professor of Econometrics in the Department of Econometrics and Business Statistics at Monash University, Melbourne.

About the authors

and contributor

Kenneth W. Clements has been at the University of Western Australia since 1981 as Winthrop Professor of Economics. He is a generalist economist with interests in international finance, monetary economics, index numbers and the economics of drugs. His research has been supported by a series of grants from the Australian Research Council and he has published recently in journals such as the Journal of Business, Journal of International Money and Finance, Economics Letters and International Statistical Review. He is a fellow of the Academy of Social Sciences in Australia and in 2008 received a UWA Award for Excellence in Teaching (Postgraduate Supervision).

Xueyan Zhao is Associate Professor of Econometrics with the Department of Econometrics and Business Statistics at Monash University in Melbourne, Australia. Her current research interests are in the area of discrete and limited dependent variable models and the analysis of micro-unit data, with research projects in health, recreational drugs, labour and agricultural economics funded by the Australian Research Council. She has published in journals such as the Journal of Econometrics, Journal of Business and Economic Statistics, American Journal of Agricultural Economics and Journal of Health Economics.

Yihui Lan is Assistant Professor of Finance at the University of Western Australia. She has published in journals such as Applied Economics, Resources Policy and Journal of Agricultural and Applied Economics. Her current research interests are exchange rate economics, capital markets research, value-at-risk modelling, futures hedge ratios and the application of wavelet analysis to economics and finance. She has also researched in the areas of stochastic index numbers, resource economics and applied demand analysis.
Acknowledgements

In carrying out our research on economics and marijuana over the course of several years, we have been fortunate in receiving helpful comments, advice and data from a large number of individuals. We would like to acknowledge the help we have received from Kym Anderson, Jon Caulkins, Mert Daryal, James Fogarty, Effie Giaros, Robert Greig, Mark Harris, Mark Hazell, Carol Howard, Yihui Lan, Jean-Baptiste Lesourd, Bill Malcolm, Bob Marks, Keith McLaren, Paul Miller, Gordon Mills, Rosalie Pacula, Don Poskitt, Alan Powell, Ye Qiang, Preety Ramful, Tom Rohling, David Sapsford, Steven Schilizzi, Michael Schneider, Antony Selvanathan, Saroja Selvanathan, Raymond da Silva Rosa, Larry Sjaastad, Jan Smith, Greg Swensen, MoonJoong Tcha, Gerard Tellis, Lester Telser, Darrell Turkington, George Verikios, Don Weatherburn, Glyn Wittwer, David Wesney, Jenny Williams and Paul Williams. Almost needless to say, these individuals do not necessarily agree with our analysis and they should not be held responsible for any errors.

We have also enjoyed working on this project with a number of excellent research assistants: Andrew Ainsworth, Renae Bothe, Germaine Chin, Joan Coffey, Mei Han, Zhao Hao, Ze Min Hu, Callum Jones, Emily Liang, Maxwell Maesep, Vitaly Pershin, Jiawei Si, Lisa Soh, Kate Stephanou, Katherine Taylor, Clare Yu, Patricia Wang, Lukas Weber and Robin Wong. Earlier versions of this research were presented at the Australian Conference of Economists, La Trobe University, 1999; the Annual Conference of the Australian Agricultural and Resource Economics Society, Fremantle, 2003; the Australian Conference of Economists, University of Sydney, 2004; the Workshop on the Economics of Alcohol, Tobacco and Illicit Drugs, organised by Turning Point Alcohol and Drug Centre, Melbourne, and the Melbourne University Centre for Microeconometrics, 2005; the ANU/UWA PhD Conference in Economics and Business, The University of Western Australia, 2005; The Econometric Society European
Meeting, Budapest, 2007; the CESifo Venice Summer Institute 2008 on “Illicit Trade and Globalisation”, Venice International University, 2008; and seminars and lectures at Curtin University of Technology, La Trobe University, The University of Western Australia and Sung Kyun Kwan University. While we have been unable to agree with everyone at these presentations, we thank participants for their valuable encouragement, feedback and comments.

We have also benefited from the helpful guidance and suggestions from Chris Harrison, Publishing Director (Social Sciences), Cambridge University Press and anonymous readers who commented on earlier versions of this material. We also acknowledge the editorial services of International Science Editing, as well as the support of the Cambridge University Press team, Sarah Coakley, Aya Kelly, Helen Reidy and Eleni Stephanou of the Business School, The University of Western Australia.

This research was financed in part by the Business School, The University of Western Australia, and the Australian Research
Council. Kenneth Clements would additionally like to acknowledge the productive research environment provided by the Business School that greatly facilitated this research. Xueyan Zhao would also wish to thank her colleagues at the Department of Econometrics and Business Statistics, Monash University for stimulating conversations and friendly support.
