Human Identity and Identification

Few things are as interesting to us as our own bodies and, by extension, our own identities. Recent years have brought a growing interest in the relationship between the body, environment and society.

Reflecting upon these developments, this book examines the role of the body in human identification, in the forging of identities and the ways in which it embodies our social worlds. The approach is integrative, taking a uniquely biological perspective and reflecting on current discourse in the social sciences. With particular reference to bioarchaeology and forensic science, the authors focus on the construction and categorisation of the body within scientific and popular discourse, examining its many tissues, from the outermost to the innermost, from the skin to DNA. Synthesising two traditionally disparate strands of research, this is a valuable contribution to research on human identification and the embodiment of identity.

REBECCA GOWLAND is a lecturer in Human Bioarchaeology in the Department of Archaeology at Durham University. Her current research interests lie in health and demography of the past, skeletal ageing and age as an aspect of social identity, social perceptions, care and treatment of the physically impaired in the past and the interrelationship between the physical body and social identity.

TIM THOMPSON is a reader in Biological and Forensic Anthropology at Teesside University, where he also acts as a consultant forensic anthropologist. Most of his research examines the effects of burning on the skeleton and how this can help to interpret the context of death. He is also interested in the relationship between identity and identification, modification of the body in the modern context and the role of forensic anthropology in the world at large.
Human Identity and Identification

1 **Introduction**  1  
1.1 Introduction and some historical context  1  
1.2 Human identification: historical context and modern applications  4  
1.2.1 *Human identification disciplines*  7  
1.2.2 *Biometric identification*  9  
1.3 Boundaries of identity and identification  10  
1.4 Structure of the book  12  

2 **Categories of identity and identification**  15  
2.1 Sex, gender, the body and science  16  
2.2 Ageing, the perception of age and the body  22  
2.3 Race, ethnicity and the body  26  
2.4 Socio-economic status  32  
2.5 Conclusion  36  

3 **The skin**  37  
3.1 The structure of the skin  38  
3.2 Skin and identification  40  
3.2.1 *Fingerprints*  41  
3.2.2 *Palmprints*  48  
3.2.3 *Footprints*  49  
3.2.4 *Earprints*  53  
3.3 Skin and identity  55  
3.3.1 *Age*  55  
3.3.2 *Gender*  60  
3.3.3 *Class*  62  
3.3.4 *Ancestry*  63
### Contents

3.3.5 Defective skin 66
3.3.6 Border disputes: one body = one individual 67
3.4 Conclusion 69

4 Blood and guts 71
4.1 The vascular system 71
4.2 Blood 74
4.2.1 Blood and identification 78
4.2.2 Blood and identity 80
4.2.3 Blood and religion 81
4.3 The eye 83
4.3.1 The eye and identification 87
4.4 Body fat 90
4.4.1 Body fat and identity 91
4.4.2 Body fat and identification 97
4.5 Organ transplantation 97
4.6 Conclusion 100

5 The skeleton 102
5.1 The structure of the skeleton 103
5.2 Skeletal aspects of identity and identification 106
5.2.1 Biological sex 107
5.2.2 Sex, identity and the skeleton 112
5.2.3 Age-at-death 115
5.2.4 Skeletal age and identity 119
5.2.5 Ancestry 121
5.2.6 Ethnicity and the skeleton 122
5.2.7 Health, stature and the skeleton 124
5.2.8 Traumas and pathologies 127
5.3 Identifying individuals 129
5.4 Conclusion 130

6 Biomolecular identification and identity 132
6.1 DNA 133
6.1.1 DNA-related aspects of identification 135
6.1.2 DNA and past populations 138
6.1.3 DNA-related aspects of identity 142
6.1.4 Genetic cloning and identity 146
6.1.5 DNA, ethnicity and geographical origins 148
6.1.6 Body boundaries and DNA 150
6.2 Bacterial communities 151
6.3 Stable isotopes 153
6.4 Conclusion 157

Acknowledgements

From its relatively simple conception, this book rapidly became a huge undertaking, one which ended up heading in a different direction to originally thought. We couldn’t have completed this work without the help and support of our colleagues and friends. We would also like to thank past and present students for their thought-provoking and challenging discussions.

In particular, we would like to thank those who read through draft versions of chapters of this book and gave their time and valuable comments. Principally we’d like to thank Prof Tracy Shildrick and Dr Paul Crawshaw (School of Social Sciences and Law, Teesside University), Melanie Brown (School of Science and Engineering, Teesside University), Dr Susan Peake (Teesside University Business School), Dr Zoe Crossland (Columbia University) and Dr Sarah Semple (Department of Archaeology, Durham University) for their input on various chapters and Jessica Cooney (University of Cambridge) for information on prehistoric finger fluting. We would also like to thank Gaynor Western (Ossafreelance) for her copy-editing and wide-ranging and insightful comments across the book. Thanks also for the copy-editing of Alejandra Gutierrez. Naturally, the content and tone of this book is solely attributable to the authors. Tim is also grateful to the Technology Futures Institute at Teesside University which gave him time to work on this book over the past few years.

We have been able to use some great images in this book, so thanks to Dr Cathy Gaither (Metropolitan State College of Denver), Dr Anwen Caffell (Durham University) and Ian Parker (Teesside University) for giving us access to their collections.

Thanks to Carole Gowland for supplying emergency childcare, without which this book would have taken even longer to write. At Cambridge University Press we’d like to thank Katrina Halliday and Megan Waddington for their patience and support throughout the process of devising and writing this book.
