Contents

Preface ..... ix

Part I A grammar of turbulence ..... 1

1 Introduction ..... 3
  1.1 Turbulence, its community, and our approach ..... 3
  1.2 The origins and nature of turbulence ..... 4
  1.3 Turbulence and surface fluxes ..... 5
  1.4 How do we study turbulence? ..... 10
  1.5 The equations of turbulence ..... 11
  1.6 Key properties of turbulence ..... 14
  1.7 Numerical modeling of turbulent flows ..... 18
  1.8 Physical modeling of turbulent flows ..... 20
  1.9 The impact of Kolmogorov ..... 20

2 Getting to know turbulence ..... 27
  2.1 Average and instantaneous properties contrasted ..... 27
  2.2 Averaging ..... 28
  2.3 Ergodicity ..... 34
  2.4 The convergence of averages ..... 35
  2.5 The turbulence spectrum and the eddy velocity scale ..... 38
  2.6 Turbulent vorticity ..... 43
  2.7 Turbulent pressure ..... 44
  2.8 Eddy diffusivity ..... 45
  2.9 Reynolds-number similarity ..... 49
  2.10 Coherent structures ..... 49
# Contents

3 Equations for averaged variables 55  
3.1 Introduction 55  
3.2 Ensemble-averaged equations 56  
3.3 Interpreting the ensemble-averaged equations 59  
3.4 Space-averaged equations 65  
3.5 Summary 70  

4 Turbulent fluxes 75  
4.1 Introduction 75  
4.2 Temperature flux in a boundary layer 76  
4.3 Mass flux in scalar diffusion 78  
4.4 Momentum flux in channel flow 83  
4.5 The “mixture length” 84  
4.6 Summary 85  

5 Conservation equations for covariances 89  
5.1 Introduction and background 89  
5.2 The fluctuation equations 90  
5.3 Example: The scalar variance equation 91  
5.4 The scalar flux and Reynolds stress budgets 99  
5.5 Applications 101  
5.6 From the covariance equations to turbulence models 106  

6 Large-eddy dynamics, the energy cascade, and large-eddy simulation 115  
6.1 Introduction 115  
6.2 More on space averaging 116  
6.3 A “thought problem”: equilibrium homogeneous turbulence 120  
6.4 Application to flows homogeneous in two dimensions 127  
6.5 The physical mechanisms of interscale transfer 129  
6.6 Large-eddy simulation 130  

7 Kolmogorov scaling, its extensions, and two-dimensional turbulence 145  
7.1 The inertial subrange 145  
7.2 Applications of inertial-range scaling 151  
7.3 The dissipative range 153  
7.4 Revised Kolmogorov scaling 159  
7.5 Two-dimensional turbulence 163
## Table of Contents

**Part II Turbulence in the atmospheric boundary layer**  173

8 The equations of atmospheric turbulence  175
   8.1 Introduction  175
   8.2 The governing equations for a dry atmosphere  175
   8.3 Accounting for water vapor, liquid water, and phase change  182
   8.4 The averaged equations for moist air  185

9 The atmospheric boundary layer  193
   9.1 Overview  193
   9.2 The surface energy balance  197
   9.3 Buoyancy effects  198
   9.4 Average vs. instantaneous structure  204
   9.5 Quasi-steadiness and local homogeneity  204
   9.6 The mean-momentum equations  205

10 The atmospheric surface layer  215
   10.1 The “constant-flux” layer  215
   10.2 Monin–Obukhov similarity  217
   10.3 Asymptotic behavior of M-O similarity  225
   10.4 Deviations from M-O similarity  228

11 The convective boundary layer  241
   11.1 Introduction  241
   11.2 The mixed layer: velocity fields  241
   11.3 The mixed layer: conserved-scalar fields  252
   11.4 The interfacial layer  259

12 The stable boundary layer  267
   12.1 Introduction  267
   12.2 The late-afternoon ABL transition over land  273
   12.3 The quasi-steady SBL  281
   12.4 The evolving SBL  286
   12.5 Modeling the equilibrium height of neutral and stable ABLs  288

**Part III Statistical representation of turbulence**  295

13 Probability densities and distributions  297
   13.1 Introduction  297
   13.2 Probability statistics of scalar functions of a single variable  298
## Contents

13.3 Examples of probability densities  
13.4 The evolution equation for the probability density  

14 **Isotropic tensors**  
14.1 Introduction  
14.2 Cartesian tensors  
14.3 Determining the form of isotropic tensors  
14.4 Implications of isotropy  
14.5 Local isotropy  

15 **Covariances, autocorrelations, and spectra**  
15.1 Introduction  
15.2 Scalar functions of a single variable  
15.3 Scalar functions of space and time  
15.4 Vector functions of space and time  
15.5 Joint vector and scalar functions of space and time  
15.6 Spectra in the plane  

16 **Statistics in turbulence analysis**  
16.1 Evolution equations for spectra  
16.2 The analysis and interpretation of turbulence signals  
16.3 Probe-induced flow distortion
