Index

Annual Temperature Cycle 111–120
  global expressions air and sea surface 118–120
  heat-exchange components:
    solar radiation 111, 112, 114, 117,
    latent heat flux 112
    infra-red back-radiation 112
    sensible heat flux 112
Analytical emulator 9, 10, 177–178, 184–187
Asymmetry ebb-flood 40–44
Bathymetric: stability 10,
  Zone 16
Bathymetry
  exponential 35–38, 47
  power law 32–35, 47
  synchronous 27–31
  under-damped 36, 38
  over-damped 36, 38
  critical-damping 36, 38
  Bed roughness 124–125
Bessel Function 33
Circulation 2
Climate Change 3, 12, 13, 16
Coastal Observatory 16
Convective overturning 84, 96–105,
  Coriolis 24
Current components
  density-driven 52
  depth-mean 56
  maximum 57
  residual 69–70
  surface-bed changes 64–67
  tidal 53
  amplitude 16
  related constituents 51
  structure 17
  wind-driven 52, 67–69, 73
Current ellipse 7, 59–62, 73–74
  a-c and c-w 61–62
  maximum amplitude 74
  minimum amplitude 74
  direction 74
  phase 74
  eccentricity 74
Currents, sensitivity to
  eddy viscosity 62
  friction 62
  inter-tidal zone 67
  latitude 63–64
  tidal constituent 64
Decay time 2
Declination 19
Deposition/settlement rate 125, 144
  boundary conditions: 130–131
  reflective bed 130, 143, 148
  absorptive bed 130, 148
  delayed 143, 148
  exponential 132–134
  Differential advection 83
Dissipation
  bottom friction 99
  vertical shear 99
Eddy diffusivity 97
Eddy viscosity: 97
  model 75–76
  formulation 57–59
Ekman Spiral 68, 73,
Elliptic orbit 19
Episodic events 2
Equations of motion 24–25
  1D momentum equation 153
  1D continuity equation 153
  linearised friction term 153
  electrical-analogy 40,
  momentum 51, 53, 84
  steady state 90
  terms:
    convective 42–43, 51–52
    Coriolis’ 72, 73
    density gradient 52
    inertial 42
    friction 43
Index

Salinity intrusion 2, 16
axial location 93–96, 160–161
flushing times 159
length 83, 90–96, 108, 158
derivations – experimental 90–91
velocity components 91
salt-wedge 92
observations 93
residual current 86–88
stratification 158
Schmidt Number 98
Sea level gradient:
river flow 85
mixed-density gradient 86–87
stratified density gradient 88
wind-driven 89
Sediment characteristics 175–176
correction 16, 132
delayed settlement 10, 176
fall velocity 16
flood-ebb dominance 177
gravitational circulation 176
half-life 11, 183
suspended concentration 16, 132
analytical solution 131, 145–142
sea-bed solution 131
tidal spectra 135–137, 144–149
vertical profile 134–135
trapping and sorting 10, 195–196
sensitivity to:
coarse-fine 201–202
half-life t½ 194–195
mouth-head 201–202
neap-spring 201–202
phase lag 0 194–195
turbidity maximum 176, 195–196
vertical profile 183–184
Sediment fluxes: 186–190
equilibrium conditions 190–191
erosion components 184–185
link to energetics 196
suspension 185–186
sensitivity to: fall velocity 191–193
bed friction 192–193
sediment transport:
modelling 124–125, 140–145
observations 137–140
Seasonal cycles 2, 111–120
Shear 2
Spin-up time 24
Stratification 16, 105–107, 110
Number 106–107
Simpson-Hunter 105–106
Prandle 106

Stokes' drift 70
Strouhal Number 58–59, 62, 72, 101
Surface-to-bed differences:
velocity 99, 102–103, 107
salinity 103–104
Sustainable exploitation 4
Synchronous estuary: 9 14
bathymetric determinants 163–164
definition 152
Morphological Zone 161–163, 168
observation vs theory 164–168
shape 157–158
solutions 27–31, 47, 154
current amplitude 29, 155
depth profile 155
estuarine length 155–156
friction to inertia ratio 156
saline intrusion 181–182
sediment dynamics 182–184
sensitivity to bed friction 29–30,
156–157
tidal propagation 178, 180–181
Temperature 2, 111–120
Test-bed data sets 15
Theoretical Frameworks 17, 172–173
Tides:
amphidrome 20
constituents 19, 20,
currents 14
energy 2
generation 17
meso 1
micro 1
M₂ constituent 2
propagation 14
straining 8, 83, 84, 96–105, 109
Tidal Response
diurnal 34
higher-harmonics 40–44
quarter-diurnal 34, 36
semi-diurnal 33–34, 38, 46
Turbidity 2
Turbidity Maximum 10, 195–196
Turbulence 2, 14

Vertical Structure:
Salinity 89
Currents 83, 101, 102–103
river flow 85–86
mixed density gradient 86–87
stratified density gradient 87–88
wind-driven 89
