| | List of Illustrations | xvii |
| | Preface | xxi |
| | Acknowledgments | xxv |
| Chapter 1 | Basic Properties of Radiation, Atmospheres, and Oceans | 1 |
| 1.1 | Introduction | 1 |
| 1.2 | Parts of the Spectrum | 1 |
| 1.2.1 | <i>Extraterrestrial Solar Flux</i> | 3 |
| 1.2.2 | <i>Terrestrial Infrared Flux</i> | 4 |
| 1.3 | Radiative Interaction with Planetary Media | 6 |
| 1.3.1 | <i>Feedback Processes</i> | 6 |
| 1.3.2 | <i>Types of Matter that Affect Radiation</i> | 6 |
| 1.4 | Vertical Structure of Planetary Atmospheres | 7 |
| 1.4.1 | <i>Hydrostatic and Ideal Gas Laws</i> | 8 |
| 1.4.2 | <i>Minor Species in the Atmosphere</i> | 12 |
| 1.4.3 | <i>Optical Line-of-Sight Paths</i> | 13 |
| 1.4.4 | <i>Radiative Equilibrium and the Thermal Structure of Atmospheres</i> | 17 |
| 1.4.5 | <i>Climate Change: Radiative Forcing and Feedbacks</i> | 20 |
| 1.5 | Density Structure of the Ocean | 24 |
| 1.6 | Vertical Structure of the Ocean | 25 |
| 1.6.1 | <i>The Mixed Layer and the Deep Ocean</i> | 25 |
| 1.6.2 | <i>Seasonal Variations of Ocean Properties</i> | 26 |

| | | |
|-----------|--|----|
| 1.6.3 | <i>Sea-Surface Temperature</i> | 27 |
| 1.6.4 | <i>Ocean Spectral Reflectance and Opacity</i> | 28 |
| 1.7 | Remarks on Nomenclature, Notation, and Units | 29 |
| 1.8 | Summary | 31 |
| | | |
| Chapter 2 | Basic State Variables and the Radiative Transfer Equation | 34 |
| 2.1 | Introduction | 34 |
| 2.2 | Geometrical Optics | 35 |
| 2.3 | Radiative Flux or Irradiance | 36 |
| 2.4 | Spectral Intensity and Its Angular Moments | 38 |
| 2.4.1 | <i>Relationship between Flux and Intensity</i> | 39 |
| 2.4.2 | <i>Average Intensity and Energy Density</i> | 40 |
| 2.5 | Some Theorems on Intensity | 42 |
| 2.5.1 | <i>Intensity and Flux from an Extended Source</i> | 44 |
| 2.6 | Perception of Brightness: Analogy with Radiance | 45 |
| 2.7 | The Extinction Law | 46 |
| 2.7.1 | <i>Extinction = Scattering + Absorption</i> | 49 |
| 2.8 | The Differential Equation of Radiative Transfer | 51 |
| 2.9 | Summary | 53 |
| | | |
| Chapter 3 | Basic Scattering Processes | 56 |
| 3.1 | Introduction | 56 |
| 3.2 | Lorentz Theory for Radiation–Matter Interactions | 58 |
| 3.2.1 | <i>Scattering and Collective Effects in a Uniform Medium</i> | 59 |
| 3.2.2 | <i>Scattering from Density Irregularities</i> | 61 |
| 3.2.3 | <i>Scattering in Random Media</i> | 62 |
| 3.2.4 | <i>First-Order and Multiple Scattering</i> | 63 |
| 3.3 | Scattering from a Damped Simple Harmonic Oscillator | 64 |
| 3.3.1 | <i>Case (1): Resonance Scattering and the Lorentz Profile</i> | 65 |
| 3.3.2 | <i>Conservative and Nonconservative Scattering</i> | 67 |
| 3.3.3 | <i>Natural Broadening</i> | 68 |
| 3.3.4 | <i>Pressure Broadening</i> | 69 |
| 3.3.5 | <i>Doppler Broadening</i> | 70 |
| 3.3.6 | <i>Realistic Line-Broadening Processes</i> | 72 |
| 3.3.7 | <i>Case (2): Rayleigh Scattering</i> | 72 |

| | | |
|-----------|--|-----|
| 3.4 | The Scattering Phase Function | 74 |
| 3.4.1 | <i>Rayleigh-Scattering Phase Function</i> | 75 |
| 3.5 | Mie–Debye Scattering | 78 |
| 3.6 | Summary | 79 |
| | | |
| Chapter 4 | Absorption by Solid, Aqueous, and Gaseous Media | 84 |
| 4.1 | Introduction | 84 |
| 4.2 | Absorption on Surfaces, on Aerosols, and within Aqueous Media | 86 |
| 4.2.1 | <i>Solids</i> | 86 |
| 4.2.2 | <i>Aerosols</i> | 88 |
| 4.2.3 | <i>Liquids</i> | 88 |
| 4.3 | Molecular Absorption in Gases | 89 |
| 4.3.1 | <i>Thermal Emission and Radiation Laws</i> | 93 |
| 4.3.2 | <i>Planck's Spectral Distribution Law</i> | 93 |
| 4.3.3 | <i>Radiative Excitation Processes in Molecules</i> | 97 |
| 4.3.4 | <i>Inelastic Collisional Processes</i> | 98 |
| 4.3.5 | <i>Maintenance of Thermal Equilibrium Distributions</i> | 101 |
| 4.4 | The Two-Level Atom | 102 |
| 4.4.1 | <i>Microscopic Radiative Transfer Equation</i> | 102 |
| 4.4.2 | <i>Effects of Collisions on State Populations</i> | 107 |
| 4.5 | Absorption in Molecular Lines and Bands | 110 |
| 4.5.1 | <i>Molecular Rotation: The Rigid Rotator</i> | 114 |
| 4.5.2 | <i>Molecular Vibration and Rotation: The Vibrating Rotator</i> | 115 |
| 4.5.3 | <i>Line Strengths</i> | 118 |
| 4.6 | Absorption Processes in the UV/Visible | 122 |
| 4.7 | Summary | 125 |
| | | |
| Chapter 5 | Principles of Radiative Transfer | 130 |
| 5.1 | Introduction | 130 |
| 5.2 | Boundary Properties of Planetary Media | 131 |
| 5.2.1 | <i>Thermal Emission from a Surface</i> | 131 |
| 5.2.2 | <i>Absorption by a Surface</i> | 132 |
| 5.2.3 | <i>Kirchhoff's Law for Surfaces</i> | 133 |

| | | |
|-----------|--|-----|
| 5.2.4 | <i>Surface Reflection: The BRDF</i> | 134 |
| 5.2.5 | <i>Albedo for Collimated Incidence</i> | 138 |
| 5.2.6 | <i>The Flux Reflectance, or Albedo: Diffuse Incidence</i> | 138 |
| 5.2.7 | <i>Analytic Reflectance Expressions</i> | 140 |
| 5.2.8 | <i>The Opposition Effect</i> | 142 |
| 5.2.9 | <i>Specular Reflection from the Sea Surface</i> | 143 |
| 5.2.10 | <i>Transmission through a Slab Medium</i> | 145 |
| 5.2.11 | <i>Spherical, or Bond Albedo</i> | 146 |
| 5.3 | Absorption and Scattering in Planetary Media | 148 |
| 5.3.1 | <i>Kirchhoff's Law for Volume Absorption and Emission</i> | 148 |
| 5.3.2 | <i>Differential Equation of Radiative Transfer</i> | 150 |
| 5.4 | Solution of the Radiative Transfer Equation for Zero Scattering | 151 |
| 5.4.1 | <i>Solution with Zero Scattering in Slab Geometry</i> | 154 |
| 5.4.2 | <i>Half-Range Quantities in a Slab Geometry</i> | 155 |
| 5.4.3 | <i>Formal Solution in a Slab Geometry</i> | 156 |
| 5.5 | Gray Slab Medium in Local Thermodynamic Equilibrium | 158 |
| 5.6 | Formal Solution Including Scattering and Emission | 159 |
| 5.7 | Radiative Heating Rate | 161 |
| 5.7.1 | <i>Generalized Gershun's Law</i> | 162 |
| 5.7.2 | <i>Warming Rate, or the Temperature Tendency</i> | 163 |
| 5.7.3 | <i>Actinic Radiation, Photolysis Rate, and Dose Rate</i> | 164 |
| 5.8 | Summary | 165 |
| | | |
| Chapter 6 | Formulation of Radiative Transfer Problems | 170 |
| 6.1 | Introduction | 170 |
| 6.2 | Separation into Diffuse and Direct (Solar) Components | 170 |
| 6.2.1 | <i>Lower Boundary Conditions</i> | 173 |
| 6.2.2 | <i>Multiple Scattering</i> | 174 |
| 6.2.3 | <i>Azimuth Independence of Flux and Mean Intensity</i> | 175 |
| 6.3 | Azimuthal Dependence of the Radiation Field | 177 |
| 6.4 | Spherical Shell Geometry | 181 |
| 6.5 | Nonstratified Media | 183 |
| 6.6 | Radiative Transfer in the Atmosphere–Ocean System | 184 |
| 6.6.1 | <i>Two Stratified Media with Different Indices of Refraction</i> | 185 |

| | | |
|-----------|---|-----|
| 6.7 | Examples of Phase Functions | 187 |
| 6.7.1 | <i>Rayleigh Phase Function</i> | 187 |
| 6.7.2 | <i>The Mie–Debye Phase Function</i> | 188 |
| 6.8 | Scaling Transformations Useful for Anisotropic Scattering | 190 |
| 6.8.1 | <i>The δ-Isotropic Approximation</i> | 192 |
| 6.8.2 | <i>The δ-Two-Term Approximation</i> | 193 |
| 6.8.3 | <i>Remarks on Low-Order Scaling Approximations</i> | 194 |
| 6.8.4 | <i>The δ-N Approximation: Arbitrary N</i> | 194 |
| 6.8.5 | <i>Mathematical and Physical Meaning of the Scaling</i> | 196 |
| 6.9 | Prototype Problems in Radiative Transfer Theory | 197 |
| 6.9.1 | <i>Prototype Problem 1: Uniform Illumination</i> | 197 |
| 6.9.2 | <i>Prototype Problem 2: Constant Imbedded Source</i> | 198 |
| 6.9.3 | <i>Prototype Problem 3: Diffuse Reflection Problem</i> | 199 |
| 6.9.4 | <i>Boundary Conditions: Reflecting and Emitting Surface</i> | 199 |
| 6.10 | Reciprocity, Duality, and Inhomogeneous Media | 202 |
| 6.11 | Effects of Surface Reflection on the Radiation Field | 203 |
| 6.12 | Integral Equation Formulation of Radiative Transfer | 205 |
| 6.13 | Probabilistic Aspects of Radiative Transfer | 207 |
| 6.13.1 | <i>The Escape Probability</i> | 210 |
| 6.14 | Summary | 211 |
| | | |
| Chapter 7 | Approximate Solutions of Prototype Problems | 217 |
| 7.1 | Introduction | 217 |
| 7.2 | Separation of the Radiation Field into Orders of Scattering | 218 |
| 7.2.1 | <i>Lambda Iteration: The Multiple-Scattering Series</i> | 220 |
| 7.2.2 | <i>Single-Scattered Contribution from Ground Reflection: The Planetary Problem</i> | 224 |
| 7.3 | The Two-Stream Approximation: Isotropic Scattering | 225 |
| 7.3.1 | <i>Approximate Differential Equations</i> | 225 |
| 7.3.2 | <i>The Mean Inclination: Possible Choices for $\bar{\mu}$</i> | 227 |
| 7.3.3 | <i>Prototype Problem 1: Differential-Equation Approach</i> | 227 |
| 7.3.4 | <i>Prototype Problem 2: Imbedded Source</i> | 237 |
| 7.3.5 | <i>Prototype Problem 3: Beam Incidence</i> | 242 |

| | | |
|-----------|---|------------|
| 7.4 | Conservative Scattering in a Finite Slab | 247 |
| 7.5 | Anisotropic Scattering | 248 |
| 7.5.1 | <i>Two-Stream Versus Eddington Approximations</i> | 248 |
| 7.5.2 | <i>The Backscattering Coefficients</i> | 253 |
| 7.5.3 | <i>Two-Stream Solutions for Anisotropic Scattering</i> | 258 |
| 7.5.4 | <i>Scaling Approximations for Anisotropic Scattering</i> | 260 |
| 7.5.5 | <i>Generalized Two-Stream Equations</i> | 261 |
| 7.6 | Accuracy of the Two-Stream Method | 263 |
| 7.7 | Final Comments on the Two-Stream Method | 267 |
| 7.8 | Summary | 269 |
| | | |
| Chapter 8 | Accurate Numerical Solutions of Prototype Problems | 281 |
| 8.1 | Introduction | 281 |
| 8.2 | Discrete-Ordinate Method – Isotropic Scattering | 281 |
| 8.2.1 | <i>Quadrature Formulas</i> | 281 |
| 8.2.2 | <i>The Double-Gauss Method</i> | 284 |
| 8.3 | Anisotropic Scattering | 287 |
| 8.3.1 | <i>General Considerations</i> | 287 |
| 8.3.2 | <i>Quadrature Rule</i> | 289 |
| 8.4 | Matrix Formulation of the Discrete-Ordinate Method | 289 |
| 8.4.1 | <i>Two- and Four-Stream Approximations</i> | 289 |
| 8.4.2 | <i>Multistream Approximation (N Arbitrary)</i> | 292 |
| 8.5 | Matrix Eigensolutions | 293 |
| 8.5.1 | <i>Two-Stream Solutions ($N = 1$)</i> | 293 |
| 8.5.2 | <i>Multistream Solutions (N Arbitrary)</i> | 294 |
| 8.5.3 | <i>Inhomogeneous Solution</i> | 295 |
| 8.5.4 | <i>General Solution</i> | 296 |
| 8.6 | Source Function and Angular Distributions | 297 |
| 8.7 | Boundary Conditions – Removal of Ill-Conditioning | 299 |
| 8.7.1 | <i>Boundary Conditions</i> | 299 |
| 8.7.2 | <i>Removal of Numerical Ill-Conditioning</i> | 302 |
| 8.8 | Inhomogeneous Multilayered Media | 304 |
| 8.8.1 | <i>General Solution – Boundary and Layer Interface Conditions</i> | 304 |
| 8.8.2 | <i>Source Functions and Angular Distributions</i> | 306 |

| | | |
|-----------|---|-----|
| 8.8.3 | <i>Numerical Implementation of the Discrete-Ordinate Method</i> | 307 |
| 8.9 | Correction of the Truncated Intensity Field | 309 |
| 8.9.1 | <i>The Nakajima–Tanaka Correction Procedure</i> | 309 |
| 8.9.2 | <i>Computed Intensity Distributions for the Standard Problem</i> | 312 |
| 8.10 | The Coupled Atmosphere–Ocean Problem | 315 |
| 8.10.1 | <i>Discretized Equations for the Atmosphere–Ocean System</i> | 315 |
| 8.10.2 | <i>Quadrature and General Solution</i> | 316 |
| 8.10.3 | <i>Boundary, Continuity, and Atmosphere–Ocean Interface Conditions</i> | 318 |
| 8.11 | The Doubling-Adding and the Matrix Operator Methods | 320 |
| 8.11.1 | <i>Matrix-Exponential Solution – Formal Derivation of Doubling Rules</i> | 323 |
| 8.11.2 | <i>Connection between Doubling and Discrete-Ordinate Methods</i> | 324 |
| 8.11.3 | <i>Intuitive Derivation of the Doubling Rules – Adding of Dissimilar Layers</i> | 324 |
| 8.12 | Other Accurate Methods | 326 |
| 8.12.1 | <i>The Spherical-Harmonics Method</i> | 326 |
| 8.12.2 | <i>Invariant Imbedding</i> | 327 |
| 8.12.3 | <i>Iteration Methods</i> | 327 |
| 8.12.4 | <i>The Feautrier Method</i> | 328 |
| 8.12.5 | <i>Integral Equation Approach</i> | 328 |
| 8.12.6 | <i>Monte Carlo Methods</i> | 328 |
| 8.13 | Summary | 328 |
| Chapter 9 | Shortwave Radiative Transfer | 335 |
| 9.1 | Introduction | 335 |
| 9.2 | Solar Radiation | 336 |
| 9.3 | Optical Properties of the Earth–Atmosphere System | 337 |
| 9.3.1 | <i>Gaseous Absorption and Penetration Depth</i> | 337 |
| 9.3.2 | <i>Optical Properties of Atmospheric Aerosols</i> | 340 |
| 9.3.3 | <i>Optical Properties of Warm (Liquid Water) Clouds</i> | 342 |

| | | |
|--|---|-----|
| 9.3.4 | <i>Optical Properties of Ice Clouds</i> | 343 |
| 9.3.5 | <i>Optical Properties of the Ocean</i> | 347 |
| 9.3.6 | <i>Optical Properties of Snow and Ice</i> | 348 |
| 9.4 | Modeling of Shortwave Radiative Effects in the Atmosphere | 351 |
| 9.4.1 | <i>Spectral Averaging Procedure: The Chandrasekhar Mean</i> | 353 |
| 9.4.2 | <i>Solar Warming Rates Due to Ozone, Aerosols, and Clouds</i> | 353 |
| 9.4.3 | <i>Computation of Photolysis Rates</i> | 355 |
| 9.4.4 | <i>UV Transmission: Relation to Ozone Abundance</i> | 356 |
| 9.4.5 | <i>UV Transmission and Dose Rates at the Earth's Surface</i> | 357 |
| 9.4.6 | <i>Comparison of Measured and Computed UV Irradiance at the Surface</i> | 361 |
| 9.5 | Modeling of Shortwave Radiation in the Ocean | 362 |
| 9.5.1 | <i>Diffuse Radiation: Attenuation in the Ocean</i> | 362 |
| 9.5.2 | <i>Two-Stream Model Appropriate for Deep Water</i> | 363 |
| 9.5.3 | <i>Backscattering by Ocean Particles: The Role of Shape Factors</i> | 364 |
| 9.5.4 | <i>Approximate Expressions for the Remotely Sensed Reflectance</i> | 367 |
| 9.5.5 | <i>Modeling the UV Transmission into the Ocean</i> | 368 |
| 9.5.6 | <i>Measured and Computed UV Irradiance in the Ocean</i> | 369 |
| 9.6 | Interaction of Solar Radiation with Snow and Ice | 370 |
| 9.7 | Summary | 372 |
| | | |
| Chapter 10 Transmission in Spectrally Complex Media | | 384 |
| 10.1 | Introduction | 384 |
| 10.2 | Transmission in an Isolated Line | 385 |
| 10.2.1 | <i>Isolated Lorentz Line</i> | 387 |
| 10.3 | Band Models | 388 |
| 10.3.1 | <i>The Elsasser Band Model</i> | 388 |
| 10.3.2 | <i>Distributed Line Intensities</i> | 389 |
| 10.3.3 | <i>Random Band Model</i> | 391 |
| 10.3.4 | <i>MODTRAN: A Moderate-Resolution Band Model</i> | 392 |
| 10.4 | Spectral Mapping Transformations for Homogeneous Media | 394 |

| | | |
|------------|--|-----|
| 10.4.1 | <i>Method of the k-Distribution</i> | 395 |
| 10.4.2 | <i>k-Distribution for the Malkmus Band Model</i> | 399 |
| 10.5 | Transmission in Nongray Inhomogeneous Media | 399 |
| 10.5.1 | <i>The H–C–G Scaling Approximation</i> | 400 |
| 10.5.2 | <i>LBL Transmission Computation: Inhomogeneous Paths</i> | 401 |
| 10.5.3 | <i>Inclusion of Multiple Scattering in LBL Computations</i> | 402 |
| 10.5.4 | <i>The Correlated-k Method</i> | 404 |
| 10.5.5 | <i>Inclusion of Multiple Scattering in the Correlated-k Method</i> | 408 |
| 10.6 | Summary | 409 |
| | | |
| Chapter 11 | Radiative Transfer in Nongray Media | 413 |
| 11.1 | Introduction | 413 |
| 11.2 | Radiative Flux and Heating Rate: Clear-Sky Conditions | 414 |
| 11.2.1 | <i>Monochromatic Flux Equations</i> | 415 |
| 11.2.2 | <i>Wide-Band Emittance Models</i> | 417 |
| 11.2.3 | <i>Narrow-Band Absorption Model</i> | 421 |
| 11.2.4 | <i>Band Overlap</i> | 422 |
| 11.2.5 | <i>The Diffusivity Approximation</i> | 422 |
| 11.2.6 | <i>Equations for the Heating Rate</i> | 423 |
| 11.2.7 | <i>Clear-Sky Radiative Cooling: Nonisothermal Medium</i> | 425 |
| 11.2.8 | <i>Computations of Terrestrial Cooling Rates</i> | 427 |
| 11.3 | The IR Radiative Impact of Clouds and Aerosols | 428 |
| 11.3.1 | <i>Heating Rate in an Idealized Cloud</i> | 428 |
| 11.3.2 | <i>Detailed Longwave Radiative Effects of Clouds</i> | 430 |
| 11.3.3 | <i>Accurate Treatment Including Scattering</i> | 432 |
| 11.4 | Summary | 434 |
| | | |
| Chapter 12 | The Role of Radiation in Climate | 438 |
| 12.1 | Introduction | 438 |
| 12.2 | Radiative Equilibrium with Zero Visible Opacity | 440 |
| 12.3 | Radiative Equilibrium with Finite Visible Opacity | 447 |
| 12.4 | Radiative–Convective Equilibrium | 450 |
| 12.5 | The Concept of the Emission Height | 453 |

| | | |
|---------|--|-----|
| 12.6 | Effects of a Spectral Window | 454 |
| 12.7 | Radiative Forcing | 456 |
| 12.8 | Climate Impact of Clouds | 458 |
| 12.8.1 | <i>Longwave Effects of Water Clouds</i> | 459 |
| 12.8.2 | <i>Shortwave Effects of Water Clouds</i> | 461 |
| 12.8.3 | <i>Combined Shortwave and Longwave Effects of Clouds</i> | 464 |
| 12.9 | Climate Impact of Cloud Height | 465 |
| 12.10 | Cloud and Aerosol Forcing | 467 |
| 12.10.1 | <i>Aerosol Forcing</i> | 470 |
| 12.11 | Water-Vapor Feedback | 471 |
| 12.12 | Effects of Carbon Dioxide Changes | 472 |
| 12.13 | Greenhouse Effect from Individual Gas Species | 473 |
| 12.14 | Summary | 474 |

Appendices

| | | |
|---|--|-----|
| A | Nomenclature: Glossary of Symbols | 481 |
| B | Physical Constants | 489 |
| C | Model Atmospheres | 490 |
| D | Ocean Optics Nomenclature | 503 |
| E | Reflectance and Transmittance at an Interface | 506 |

Index

The following Appendices are available via the web at
<http://odin.mat.stevens-tech.edu/rttext/>

| | |
|---|---|
| F | Elementary Concepts |
| G | Primer on Absorption and Scattering |
| H | Electromagnetic Radiation: The Plane Wave |
| I | Representation of Polarized Light |
| J | Scaling Transformation for Anisotropic Scattering |
| K | The Discrete Ordinate: Numerical Aspects |
| L | Spherical Shell Geometry |
| M | Reciprocity for the BDRF |
| N | Isolation of the Azimuthal Dependence |
| O | The Streaming Term in Spherical Geometry |
| P | Reciprocity, Duality and the Effects of Surface Reflection |
| Q | Removal of Overflow Problems in the Intensity Formula |
| R | Integration of the Planck Function a Spectral Interval |
| S | Computation of the Normalized Associated Polynomials |
