Observational Research in U.S. Classrooms

New Approaches for Understanding Cultural and Linguistic Diversity

The present national reform agendas stress that rigorous content and high expectations be accessible to all students, including students from groups whose achievement has traditionally lagged behind that of majority culture students. Improving achievement in U.S. schools, important for both social and economic stability, will require that instruction be responsive to our nation’s increasingly diverse student population. This book includes theoretical frameworks as well as substantive research findings and provides examples of recently developed classroom observation instruments based on research on effective teaching practices for culturally and linguistically diverse students. Each chapter presents a new aspect of classroom observation research that will assist educators in their endeavors to improve U.S. schools.

Hersh C. Waxman is Professor of Educational Leadership and Cultural Studies in the College of Education at the University of Houston; a Principal Researcher in the U.S. Department of Education, National Center for Research on Education, Diversity, and Excellence; and a Principal Investigator in the U.S. Department of Education, National Laboratory for Student Success, the Mid-Atlantic Regional Educational Laboratory. His research focuses on classroom learning environments, school and teacher effectiveness, urban education, and students at risk of failure.

Roland G. Tharp is Director of the Center for Research on Education, Diversity, and Excellence (CREDE); Professor of Education and Psychology at the University of California, Santa Cruz; and recipient of the prestigious 1993 Grawemeyer Award in education for the book Rousing Minds to Life: Teaching, Learning, and Schooling in Social Context. His most recent book is Teaching Transformed: Achieving Excellence, Fairness, Inclusion, and Harmony.

R. Soleste Hilberg is an Education Research Specialist at the Center for Research on Education, Diversity, and Excellence (CREDE) at the University of California, Santa Cruz.

Observational Research in U.S. Classrooms was published in collaboration with CREDE, a federally funded research and development program focused on improving the education of students whose ability to reach their potential is challenged by language or cultural barriers, race, geographic location, or poverty.
This book is dedicated to the memory of Dr. Margaret Wang,
a wonderful educator, researcher, and mentor
who introduced me to the field of observing classroom behavior
in culturally diverse schools. (HCW)
Observational Research in U.S. Classrooms

New Approaches for Understanding Cultural and Linguistic Diversity
