

## SKIN INFECTIONS

### *Diagnosis and Treatment*

This is the first textbook linking the two disciplines of dermatology and infectious diseases. As the number of elderly, AIDS, transplant, and cancer surviving patients continues to rapidly increase worldwide, all medical personnel need to be able to rapidly recognize and treat infections. The skin is the most easily accessed and monitored of all organs and is often the first sign of infection. Knowledge of the integument's link to infection is a must for the modern medical nurse, nurse practitioner, medical student, resident, and practitioner. To accomplish these goals, the text features authors from around the world who are considered experts in their various fields. The book is organized into types of

infections, locations in the integument, specific subpopulations of patients at risk, and regional variations of infections.

John C. Hall, M.D., is an associate staff in dermatology at the University of Missouri–Kansas City School of Medicine. He is also on primary staff in the Department of Medicine (subspecialty dermatology) at St. Luke's Hospital in Kansas City, Missouri, and on staff in dermatology at the Kansas City Free Health Clinic.

Brian J. Hall, M.D., is a pathology resident at St. Louis University School of Medicine.

## Acknowledgments

My wife, Charlotte, gave me all the encouragement anyone could ask.

The late Richard Q. Crotty, MD, gave me the chance to be a dermatologist. The late Clarence S. Livingood, MD, taught me to be true to my science and my patients. The late David Gibson, MD, and Ken Watson, DO, led my way in dermatopathology. My office manager, Christa Czysz, has kept me afloat. My nurses,

Brandi DelDebbio and Kelly Hudgens, and my office staff, Kelly Howell and Jennifer Phillips, have helped in enumerable ways.

A special thanks is due to my son, Brian J. Hall, MD, for endless hours helping edit and organize this text. The incredible group of authors in this book will speak for themselves through these pages. It would be an honor to be half the physician these dermatologists have proven to be.
