

INDEX

- Adam Smith, x–xi, 2, 332–3  
affine transform of a power function, 235  
annual growth rates, and long-term growth rates, 157  
arbitrage  
    about arbitrage, 293–4  
    definition, 293  
    effects on financial markets, 294  
    equilibrium with overvalued assets, 297–8  
        arbitraders actions, 297–8  
        investors behaviour, 298  
    equilibrium with undervalued assets, 295–7  
        arbitrageurs actions, 295–6  
        investors behaviour, 296–7  
        risk and uncertainty, 298–300  
Arrow, Kenneth, 332  
  
Beltrami equation, 191  
Bernouilli, Johan  
    Bernouilli’s problem, 178–9  
    differential equation, 39–40  
biosphere depreciation, economic growth, and the welfare of society, 15–16  
Bottero, I  
brachistochrone problem, 189–94  
  
calculus of variations, 184–7  
    applied to optimal growth, 211–16  
    Dorfmanian derivations, 206–9  
    with Euler equation, for optimal growth, 212–13  
    Lagrange’s argument, 179–83  
    and Pontryagin maximum principle, 201–2  
    with Ramsey equation, for optimal growth, 213–16  
        alternative derivations in future value, 216  
        finite horizon approach, 215–16  
        infinite horizon approach, 214–15  
        very short time interval approach, 214  
capital  
    depreciation of, and the growth process, 29  
    as a factor of production, 29–30  
    capital share at time 0 ( $\delta$ ), 95, 106–8  
    capital valuation and the economic growth model, 282–7  
        evaluating one unit of capital, 283–4  
        Fisher equation, 284–7  
        valuation of assets from, 285–7  
        future value of a dollar invested in a capital good, 282–3  
    capital-augmenting technical progress, 55  
    capital-labour ratio  $r$ , and the equation of motion of the economy, 38–43  
    capital-labour substitution and economic growth, no technical progress, 114–33  
        about capital-labour substitution and  $\sigma$ , 114–15  
        (CES) function in a growth model, 115–29  
        cost function derivation with capital and labour-augmenting progress, 154–5  
        elasticity of substitution  $\sigma$  at work, 129–33  
    capital-labour substitution and economic growth, with technical progress, 133–45  
        about labour-augmenting technical progress, 135–7  
        about technical progress effects, 133–4  
        asymptotic growth when  $\sigma \geq 1$ , 137–9  
        asymptotic growth when  $\sigma < 1$ , 139–45  
        broader significance of  $\sigma$  with economic growth, 152–4  
        change of  $\sigma$  compared to technical progress, 145  
        theorems for the effect of technical progress, 134–5  
    central model of optimal growth theory, 234–6  
    centrally and poor countries, 329–30  
        absence of equality of chances, 330  
        closed economies, 329  
        effects of broken growth process, 329–30  
        stability of systems, 330  
        *see also* planning, problems with  
    Child, I  
    Cobb-Douglas function, 35–6, 78, 82–3, 95–6  
    competitive equilibrium  
        and growth in disequilibrium, 312  
        and optimal savings rate, 304–5  
    constant elasticity of substitution (CES), applications where  $\sigma = 0, 1$ , or  $\infty$ , 94–6  
        capital share at time 0 ( $\delta$ ), 95  
        Cobb-Douglas production function ( $\sigma = 1$ ), 95–6

- linear function ( $\sigma = \infty$ ), 96
- Walras-Leontief production function ( $\sigma = 0$ ), 96
- constant elasticity of substitution (CES), determining, 83–6
  - about determining CES, 83
  - identifying constant  $\alpha$ , 85–6
  - identifying constant  $\beta$ , 86
- constant elasticity of substitution (CES), as a general mean, 90–113
  - about CES as a general mean, 90–1
  - about order of the mean  $p$ , 90–2
  - general mean of order  $p$  concept, 92–4
    - arithmetic mean, 92
    - definition, 92
    - fundamental property of general means, 94
    - geometric mean, 93
    - harmonic mean, 92
    - when  $p$  tends to  $+\infty$  and  $-\infty$ , 93–4
- constant elasticity of substitution (CES), in a growth model, 115–29
  - cost of producing one unit of national product theorem, 118
  - $\sigma$  as an efficiency indicator, 115–16
  - equilibrium/disequilibrium and income per person, 118–29
  - Klump and La Grandville theorems, 116–18
    - proofs, 117–18
  - and miracle growth in Japan/South Asian countries, 116
- constant elasticity of substitution (CES), qualitative behaviour as  $\sigma$  changes, 97–111
  - economic interpretation of the coefficient  $\delta$ , 106–8
  - income per person as a function of  $\sigma$ , 108–11
  - income per person as a function of  $r$ , 103–6
    - case  $0 < \sigma < 1$ , 104
    - case  $\sigma > 1$ , 104–6
  - opening up of the surface  $F_\sigma(K, L)$ , 97–103
- consumer price indexes, 11
- consumers' surplus, 19–21
- continuously compounded yearly growth rate, 161
- cost function derivation with capital and labour-augmenting progress, 154–5
- demand
  - definition, 16
  - factor demand concept, 74
- democracy, and standards of living, 14
- demographic growth, Ibn Khaldun on, 334
- depreciation of capital, and the growth process, 29
- derivative concept, 58
- differential equations, first-order, 63–5
  - solution in definite form, 65
  - solution in indefinite form, 63–4
- Dorfmanian/Dorfman's methods for the maximum principle, 202–6
  - about Dorfmanian, 199–200
  - deriving the Euler equation from economic reasoning, 205–6
  - deriving high-order equations of the calculus of variations
    - first extension, 206–7
    - second extension, 207–8
    - additional extensions, 208–9
  - first derivation, 202–4
  - origin of, xii

- Walras-Leontief
  - or Harrod-Domar production function, 96
  - study, 48–52
- yearly growth rates
  - first moments of, 163–9
    - arithmetic and geometric means, 168
    - convergence toward the geometric mean, 167–9
  - expected value and variance, 166
  - from independent identically distributed variables, 165–6
  - from normally distributed variables, 164–5
  - probabilities for intervals of the *n*-horizon growth rate, 167- from daily rates, 158–63
  - continuously compounded yearly growth rate, 161
  - lognormal distributions/variables, 159–63
  - variance of, 157, 161–2
