

Want to **get started in astronomy** but don't know where to begin?

# Stargazing Basics

## Getting Started in Recreational Astronomy

Paul E. Kinzer

Do you often **look up at the night sky** admiring its beauty **and wonder** how easy it would be to get started in observational astronomy? Do you ask yourself: **Should I buy binoculars or a telescope? What can I expect to see?**

This wonderful informal guide to astronomy has all the information an absolute beginner needs to get started. It explains the basic techniques and equipment you need for exploring the night sky, from observing with the naked eye to using binoculars and telescopes. It then takes you on a tour of the night sky, covering the Moon, Sun, stars, planets, and more. The author gives sound advice on purchasing affordable binoculars, telescopes, and accessories. The text is illustrated with photos taken by the author, showing how objects in the sky actually look through modest amateur equipment. Whether you are a parent thinking of buying a telescope for your children, or a newcomer yourself, this book has all you need to know to take the first steps into the fascinating world of astronomy.
