Part I Concepts from Modeling, Inference, and Computing

1 Probabilistic Modeling and Inference	3
1.1 Modeling with Data	3
1.2 Working with Random Variables	8
1.3 Data-Driven Modeling and Inference	28
1.4 Exercise Problems	33
Additional Reading	39
2 Dynamical Systems and Markov Processes	40
2.1 Why Do We Care about Stochastic Dynamical Models?	40
2.2 Forward Models of Dynamical Systems	41
2.3 Systems with Discrete State-Spaces in Continuous Time	44
2.4 Systems with Discrete State-Spaces in Discrete Time	74
2.5 Systems with Continuous State-Spaces in Discrete Time	80
2.6 Systems with Continuous State-Spaces in Continuous Time	93
2.7 Exercise Problems	101
Additional Reading	107
3 Likelihoods and Latent Variables	108
3.1 Quantifying Measurements with Likelihoods	108
3.2 Observations and Associated Measurement Noise	117
3.3 Exercise Problems	125
Additional Reading	130
4 Bayesian Inference	131
4.1 Modeling in Bayesian Terms	131
4.2 The Logistics of Bayesian Formulations: Priors	139
4.3 EM for Posterior Maximization	147
4.4 Hierarchical Bayesian Formulations and Graphical Representations	148
4.5 Bayesian Model Selection	152
4.6 Information Theory	157

4.7	Exercise Problems	160
	Additional Reading	162
5	Computational Inference	163
5.1	The Fundamentals of Statistical Computation	163
5.2	Basic MCMC Samplers	170
5.3	Processing and Interpretation of MCMC	189
5.4	Advanced MCMC Samplers	195
5.5	Exercise Problems	208
	Additional Reading	212
Part II Statistical Models		
6	Regression Models	215
6.1	The Regression Problem	215
6.2	Nonparametric Regression in Continuous Space: Gaussian Process	219
6.3	Nonparametric Regression in Discrete Space: Beta Process Bernoulli Process	230
6.4	Exercise Problems	234
	Additional Reading	243
7	Mixture Models	245
7.1	Mixture Model Formulations with Observations	246
7.2	MM in the Bayesian Paradigm	250
7.3	The Infinite MM and the Dirichlet Process	258
7.4	Exercise Problems	260
	Additional Reading	262
8	Hidden Markov Models	264
8.1	Introduction	264
8.2	The Hidden Markov Model	265
8.3	The Hidden Markov Model in the Frequentist Paradigm	268
8.4	The Hidden Markov Model in the Bayesian Paradigm	282
8.5	Dynamical Variants of the Bayesian HMM	291
8.6	The Infinite Hidden Markov Model	296
8.7	A Case Study in Fluorescence Spectroscopy	299
8.8	Exercise Problems	312
	Additional Reading	316
9	State-Space Models	318
9.1	State-Space Models	318
9.2	Gaussian State-Space Models	320
9.3	Linear Gaussian State-Space Models	322
9.4	Bayesian State-Space Models and Estimation	328
9.5	Exercise Problems	330
	Additional Reading	332

10	Continuous Time Models	333
10.1	Modeling in Continuous Time	333
10.2	MJP Uniformization and Virtual Jumps	335
10.3	Hidden MJP Sampling with Uniformization and Filtering	337
10.4	Sampling Trajectories and Model Parameters	339
10.5	Exercise Problems	342
	Additional Reading	343
 Part III Appendices		
Appendix A	Notation and Other Conventions	347
A.1	Time and Other Physical Quantities	347
A.2	Random Variables and Other Mathematical Notions	347
A.3	Collections	348
Appendix B	Numerical Random Variables	349
B.1	Continuous Random Variables	349
B.2	Discrete Random Variables	357
Appendix C	The Kronecker and Dirac Deltas	361
C.1	Kronecker Δ	361
C.2	Dirac δ	361
Appendix D	Memoryless Distributions	364
Appendix E	Foundational Aspects of Probabilistic Modeling	366
E.1	Outcomes and Events	366
E.2	The Measure of Probability	371
E.3	Random Variables	376
E.4	The Measurables	378
E.5	A Comprehensive Modeling Overview	381
	Additional Reading	382
Appendix F	Derivation of Key Relations	383
F.1	Relations in Chapter 2	383
F.2	Relations in Chapter 3	384
F.3	Relations in Chapter 5	387
F.4	Relations in Chapter 6	389
F.5	Relations in Chapter 7	392
F.6	Relations in Chapter 8	395
F.7	Relations in Chapter 9	401
F.8	Relations in Chapter 10	406
	<i>Index</i>	408
	<i>Back Cover</i>	416
