

The Economics of Structural Racism

This extensive and comprehensive book tracks persistent racial disparities in the United States across multiple regimes of structural racism. It begins with an examination of the economics of racial identity, mechanisms of stratification, and regimes of structural racism. It analyzes trends in racial inequality in education and changes in family structure since the demise of Jim Crow. The book also examines generational trends in income, wealth, and employment for families and individuals, by race, gender, and national region. It explores economic differences among African Americans, by region, ethnicity, nativity, gender, and racial identity. Finally, the book provides a theoretical analysis of structural racism, productivity, and wages, with a special focus on the role of managers and instrumental discrimination inside the firm. The book concludes with an investigation of instrumental discrimination, hate crimes, the criminal legal system, and the impact of mass incarceration on family structure and economic inequality.

PATRICK L. MASON is Professor of Economics and Economist at the Political Economy Research Institute, University of Massachusetts, Amherst. His research interests include racial inequality, educational achievement, income distribution, unemployment, social identity, family well-being and structure, racial profiling, and computerization, innovation, and employment.

Cambridge Studies in Stratification Economics: Economics and Social Identity

Series Editor

William A. Darity Jr., *Duke University*

The Cambridge Studies in Stratification Economics: Economics and Social Identity series encourages book proposals that emphasize structural sources of group-based inequality, rather than cultural or genetic factors. Studies in this series will utilize the underlying economic principles of self-interested behavior and substantive rationality in conjunction with sociology's emphasis on group behavior and identity formation. The series is interdisciplinary, drawing authors from various fields including economics, sociology, social psychology, history, and anthropology, with all projects focused on topics dealing with group-based inequality, identity, and economic well-being.
