13C-Metabolic Flux Analysis, *see* Metabolic Flux Analysis (MFA)

acetolactase synthase, 101
acetyl-CoAsynthethase, 192
activators, *see* effectors
Akiake Information Criterion (AIC), *see* information theoretic tools
alcohol dehydrogenase, 192
allosteric control, *see* regulation
alternate integer linear programming (AILP), *see* optimization algorithms
ammonium chloride, 141, 145
Aris, Rutherford, 105, 235
arthrospores, 245
AUMIC, *see* metabolic network modeling tools

*Bacillus subtilis*, *see* microorganisms
Bailey, James E., xiii, 186, 190
balanced growth, 131, 183, 242, *see also* exponential phase or growth
bang-bang policy, *see* control laws
basal maintenance, *see* maintenance
Bayesian Information Criterion (BIC), *see* information theoretic tools
bioethanol productivity, 140, 143, 148, 149
boundary crossing, *see* nonlinear analysis

*Candida boidinii*, *see* microorganisms
carbon starvation, *see* starvation
carbon storage molecules, *see* storage compounds
catch-up point, *see* nonlinear analysis
*Cephalosporium acremonium*, *see* microorganisms
complementary substrates, *see* substrates
compositie flux through elementary mode, 90, 94, *see also* harmonic mean
constitutive enzyme synthesis, *see* enzymes, balance
constraint-based approaches
  dynamic flux balance analysis (dFBA), 136, 137, 139, 140, 149, 167, 199, 241, 242, 244, 246
  flux balance analysis (FBA), 1, 106, 111, 114, 115, 118, 124, 137, 149, 168, 183, 184, 189, 190, 196–198, 200, 203, 240, 241, 246, 248–250
  flux variability analysis (FVA), 200
  minimization of metabolic adjustment (MOMA), 187, 189, 190, 193, 196–198
  regulatory on/off minimization (ROOM), 187, 189, 190, 193, 196–198
control laws
  bang-bang policy, 69, 75
  indifferent policy, 75, 77
  unweighted greedy policy, 76
  unweighted temperate policy, 76
  weighted greedy policy, 76
  weighted temperate policy, 76
  zero cost policy, 75
control-effective fluxes (CEFs), 176
convex analysis
  convex basis, 87, 123–127, 129, 130, 201, 202
  convex combination, 87, 90, 123–125, 134, 157, 176, 202
  convex cone, 125, 128
  convex hull, 127, 128, 130, 134, 167–169, 243
  edge vectors, 124, 125, 128, 169, 201, 202
  flux cone, 123, 125–129, 201–203, 240, 243
  polyhedral cone, 125, 201
  polyhedron, 202, 203
core biomass, 89, 93, 96
covalent regulatory control, *see* regulation
Crabtree effect, 158, 163–167, 178, *see also* overflow metabolism
cybernetic control
  global control, 88, 90, 91, 239
  global objective, xiii, 91, 92, 96, 108, 109, 154, 155
  local control, 90, 91, 239
  local objective, xiii
  matching law, 7–10, 12, 38, 55, 56, 64, 66, 69, 71, 73–76, 85, 93, 111, 199, 216, 244
  matching law (generalized version), 85
  matching laws (generalized version), 69
  proportional law, 9, 11, 12, 38, 55, 66, 69, 71, 74–76, 85, 93, 216, 244
  proportional law (generalized version), 70, 85
cybernetics, 2
