## Contents

<i>Preface</i>	<i>page</i> xv
<i>Acknowledgements</i>	xix
<i>List of abbreviations</i>	xxi
Chapter 1. Introduction	1
1.1. Introduction	1
1.1.1. Neuroethics: the promises and perils of neuroscience research	4
1.2. Addiction enters the neuroscientific era	7
1.3. Aims and overview	10
<b>Part 1. The Science of Addiction</b>	
Chapter 2. What is addiction?	19
2.1. Introduction	19
2.2. The phenomenology of addiction	20
2.2.1. Folk understanding of addiction	21
2.2.2. Clinical understanding of addictive behaviour	21
2.3. The social and economic costs of drug use and addiction	23
2.3.1. Prevalence of drug use and addiction in Australia	23
2.3.2. Drug use related harm	24
2.3.3. Burden of disease due to alcohol and drug use	25
2.4. Social response to drug abuse and addiction	26
2.5. Governing models of addiction	28
2.5.1. Moral vs. medical models of addiction	28
2.5.2. Neurobiological models of addiction	31
2.5.3. Potential consequences of neurobiological explanations of addiction	32
2.6. Conclusion	34
	vii

viii	<i>Contents</i>
Chapter 3. The neurobiology of addiction	35
3.1. Introduction	35
3.2. The neuroanatomy of addiction	36
3.2.1. Reward and reinforcement: the ‘dopamine hypothesis’	38
3.2.2. The endogenous opioid system	45
3.3. Memory, learning and habits	46
3.4. Compulsion, craving and inhibitory control	47
3.5. Executive control and cognitive impairment	47
3.6. Representing bodily urges	50
3.7. Stress and drug use	50
3.8. Molecular and cellular changes in addiction	51
3.8.1. Synaptic plasticity in addiction	52
3.8.2. Epigenetic changes in addiction	53
3.9. Vulnerability to addiction: genetic and neuropsychological factors	55
3.9.1. Genetic susceptibility to addiction	55
3.9.2. Vulnerabilities to addiction: a confluence of the genetic and the social	57
3.10. Conclusion	59
Chapter 4. Neurobiological treatment of addiction	61
4.1. Introduction	61
4.2. Pharmacological treatments that block drug binding	62
4.2.1. Agonists	62
4.2.2. Antagonists	66
4.2.3. Partial agonists	67
4.2.4. Duration of pharmacological treatment of addiction	68
4.3. Pharmacological treatments of withdrawal	69
4.4. Pharmacological treatments of craving and relapse	70
4.4.1. Dopaminergic mesolimbic reward pathway	70
4.5. Pharmacological interventions in systems related to the reward pathway	72
4.5.1. Opioids	72
4.5.2. The amino acid neurotransmitters: glutamate and GABA	73
4.5.3. Cannabinoids	74

Cambridge University Press

Table of Contents

[More information](#)

<i>Contents</i>	ix
4.5.4. Corticotropin-releasing factor and the stress response	74
4.5.5. Memory manipulators and cognitive enhancers	75
4.6. Pharmacogenetic treatment of addiction	75
4.7. Novel approaches to drug treatment	76
4.7.1. Immunotherapies	76
4.7.2. Long-acting or sustained-release medications	77
4.7.3. Neurosurgery and deep brain stimulation	78
4.7.4. Transcranial magnetic stimulation	79
4.7.5. Applications of neuroimaging and neurocognitive screening in addiction treatment	79
4.8. Psychosocial treatment of addiction	81
4.9. Conclusion	81
<b>Part 2. The Ethical and Philosophical Implications of Neuroscientific Knowledge of Addiction</b>	
Chapter 5. Autonomy, addiction and the public good	85
5.1. Introduction	85
5.2. Approaches to ethical analysis	87
5.2.1. Introduction to ethics	87
5.2.2. Principlism	90
5.2.3. Human rights	94
5.2.4. A pragmatic approach to neuroethics	95
5.3. Ethical principles in the treatment of addiction	97
5.3.1. Autonomy and addiction	99
5.3.2. Addiction and the public good	101
5.4. The minimum conditions for the ethical treatment of addiction	102
5.5. Conclusion	103
Chapter 6. Autonomy and the capacity to consent to addiction treatment	105
6.1. Introduction	105
6.2. The role of informed consent in addiction treatment	106
6.3. Can 'addicts' say 'no' to drugs?	108
6.3.1. Sceptical views of impaired autonomy in addicted individuals	113
6.3.2. Capacity to consent to abstinence-oriented treatment	114

*Contents*

6.4. Implications for obtaining informed consent to enter addiction treatment	115
6.5. Guidelines when admitting individuals into addiction treatment	117
6.6. Conclusion	119
Chapter 7. The rights of individuals treated for addiction	121
7.1. Introduction	121
7.2. Addiction, drug policy and human rights	122
7.2.1. Basic human rights for addicted individuals	123
7.3. The right to access to effective treatment of addiction	124
7.3.1. The case for medical treatment of addiction	124
7.3.2. Effective treatment of addiction	125
7.3.3. The right to access harm reduction measures	126
7.3.4. The right to effective medical treatment	127
7.4. The use of unevaluated and risky treatments of addiction	128
7.5. Respecting human rights when treating under legal coercion	129
7.6. Human rights in the treatment of addicted prisoners	130
7.7. Human rights in the treatment of addicted pregnant women	131
7.8. Future challenges for human rights practitioners	132
7.9. Conclusions	133
Chapter 8. Coerced treatment of addiction	134
8.1. Introduction	134
8.2. Approaches to coerced treatment	135
8.3. The case for legally coerced treatment	136
8.4. When is coerced treatment ethical?	138
8.5. Ethical issues in providing coerced addiction treatment	142
8.6. Is compulsory addiction treatment ethically acceptable?	142
8.7. Conclusion	144
Chapter 9. Ethics of addiction research	146
9.1. Introduction	146
9.2. Informed consent to participate in addiction research	148
9.3. Paying addicted subjects	150

Cambridge University Press

Table of Contents

[More information](#)

<i>Contents</i>	xi
9.4. Privacy, confidentiality and anonymity	152
9.5. Administering addictive drugs in research studies	153
9.5.1. Why do neuroscientists give drugs to ‘addicts’?	154
9.5.2. The risks of giving ‘addicts’ drugs in research settings	156
9.5.3. Research participation by treated vs. untreated ‘addicts’	157
9.5.4. Recruiting subjects and obtaining consent	158
9.6. Conclusion	160
<b>Part 3. The Ethical and Public Policy Implications of Novel Technologies for the Treatment of Addiction</b>	
Chapter 10. New developments in the treatment of addiction	165
10.1. Introduction	165
10.2. Novel pharmacological treatments of addiction	167
10.2.1. Ethical and policy issues in pharmacological R&D in addiction	168
10.2.2. Anti-craving drugs	169
10.3. Novel relapse prevention treatments	170
10.3.1. Drug vaccines as a prophylaxis against relapse	170
10.3.2. Sustained-release treatments: depot medications and drug implants	173
10.3.3. The Australian naltrexone implant experience	176
10.3.4. Coerced use of depot naltrexone to ‘restore autonomy’?	176
10.4. Conclusion	179
Chapter 11. The search for a neurological ‘cure’ of addiction?	180
11.1. Introduction	180
11.2. A brief history of addiction ‘cures’	181
11.2.1. Quacks and nostrums: 1830–1900	181
11.2.2. Early medical treatments of drug withdrawal: 1900–1970	183
11.3. The modern era: neurobiologically inspired addiction ‘cures’	185
11.3.1. Ibogaine therapy	186
11.3.2. Ultra-rapid opioid detoxification	187

xii	<i>Contents</i>
11.3.3. Neurosurgical ‘treatment’ of addiction	187
11.4. Deep brain stimulation for intractable addiction?	190
11.5. Avoiding future therapeutic enthusiasms	195
 Chapter 12. Preventive medicine and personalised treatment of addiction	 197
12.1. Introduction	197
12.2. Bioprediction of addiction liability	197
12.2.1. Predictive genetic testing of addiction liability	 198
12.2.2. Using genetic information to increase abstinence from drug use	 200
12.2.3. Genetic discrimination and third party uses of genetic information	 202
12.2.4. Premature commercialisation of genetic testing	 204
12.2.5. Preventive interventions: ‘vaccinating’ against addiction	 206
12.2.6. Predictive uses of neuroimaging technologies	207
12.3. Personalised treatment of addiction	208
12.3.1. Pharmacogenetic treatment of addiction	209
12.3.2. Neuroimaging and cognitive tests in the clinic	211
12.4. Conclusion	213
 Chapter 13. Feeling better than well	 214
13.1. Introduction	214
13.2. Memory modifiers, cognitive enhancers and mood modulators	 214
13.3. What’s wrong with neuroenhancement?	216
13.3.1. Concerns about safety and efficacy	217
13.3.2. Coerced neuroenhancement: a psychopharmacological ‘arms race’	 218
13.3.3. Equity of access to neuroenhancement technologies	 219
13.3.4. Naturalistic objections to enhancement: morality and personhood	 220
13.4. Lessons from recreational drug use and drug policy	221
13.5. The future of drug regulation	223
13.6. Conclusion	225

<i>Contents</i>	xiii
<b>Part 4. The Future of Addiction Research and Policy</b>	
Chapter 14. The social and policy implications of addiction	
neurobiology	229
14.1. Introduction	229
14.2. Implications for public health policies towards drug addiction	229
14.3. Medicalisation of addiction	230
14.4. Neuroscience, addiction treatment and public health policy	232
14.4.1. Competing population health strategies	233
14.4.2. Subversive uses of neuroscience research on addiction	234
14.5. Drug policy and double standards	237
14.6. The prospects of novel pharmacological harm reduction: engineering ‘safer’ recreational drugs?	240
14.7. Conclusions	242
Chapter 15. Concluding remarks and summary	244
15.1. Introduction	244
15.2. Summary and conclusion	244
15.2.1. Key findings	247
15.2.2. Specific implications for the treatment of addiction	250
15.3. Neuroscience and the media: the role and responsibility of neuroscientists	254
15.4. The tasks ahead for ethicists and policy makers	256
15.5. Future directions for addiction neuroethics	258
15.5.1. Private and public understanding of addiction neuroscience	259
15.5.2. Capacity to consent in a research or treatment setting	260
15.5.3. Epidemiological modelling of addiction policy	261
15.5.4. Using incentives to reduce drug use and achieve better health outcomes	262
15.6. Conclusion	262
