 - principles, 1
 - problems in sampling with, 98
- analysis method (CS), 441–442
- analysis window, 123
- annihilating filter, 664, 666
- anti-aliasing filter (Shannon-Nyquist), 105
- arbitrary input
 - discrete-time rate conversion, **334**, **335**, **337**, 334–337
 - equal sampling, **190**, **191**, 190–191
 - sampling filters, 305–310, 312
 - SMI, 126
- arbitrary subspace priors, **345**, 342–347
- ARMA system, 85
- autocorrelation matrix, 770
- autoregressive system, 85
- Back-DSP algorithm, **631**, 631–632
- Balian-Low theorem, 125
- bandlimited sampling
 - definition, 773–774
 - with noise, **277**, 277–279
 - pointwise sampling, **289**, 288–289
 - rate conversion, 326–337
 - redundant, **167**, 165–168
 - replacement of continuous with discrete, 4
- bandpass sampling, **588**, **589**, 587–592
- basis
 - definition, 32, 35–36
 - sparse, 525–527
- basis expansions
 - generalized samples, **203**, **204**, 202–205
 - linear algebra, 32–44
 - linear sampling, **203**, **204**, 202–205
 - orthogonal, 98
 - Riesz, **153**, 152–154
- basis pursuit (BP), 432
- basis pursuit denoising (BPDN), **435**, 432–435, 451, **504**
- Bayes' rule, 556
- beamforming, **745**, 746–748, **749**, **750**, 750
- Bernoulli distribution, 429
- Bessel sequence, 57
- Beurling, A., 290, 393, 435
- Beurling density, **581**, 580–581
- bicubic interpolation, **246**
- bijjective transformation, 24, 192
- binary phase shift keying (BPSK), 563
- biorthogonal bases
 - calculation, 105–106
 - multichannel, **228**
 - in multiple generator subspaces, **173**, 171–175
- blind sampling, **530**
 - CS, 475
 - in finite-dimensional union class, **527**, **533**, **534**, 522–534
 - multiband sampling, 624–633
- block BP algorithm, 489, **492**
- block coherence, **488**, 485–488, **503**, **504**, **506**, **507**, 500–513
- block IHT, 493
- block K-SVD, **521**, 518–522

- block OMP algorithm, **492**, 491–492, 503, **503**, **504**, 500–510
- block recovery methods, **498**, **499**, 493–501
- block sparsity
 BCS with multiple measurements, 532–533, **533**, **534**
 as deterministic modeling, 402
 finite union sampling, **476**, **477**, 476–478
 in finite unions, **480**, 479–485
- bounded-input, bounded-output (BIBO) stability, 73
- boundedness
 and linear independence, 34
 of linear transformation, 22
 Riesz bases, 38
