CONTENTS

Preface *page* xv
Frequently Used Notation xvii

1 **Thermophysical and Transport Fundamentals** 1
1.1 Conservation Principles 1
1.1.1 Lagrangian and Eulerian Frames 1
1.1.2 Mass Conservation 2
1.1.3 Conservation of Momentum 3
1.1.4 Conservation of Energy 6
1.2 Multicomponent Mixtures 11
1.2.1 Basic Definitions and Relations 11
1.2.2 Thermodynamic Properties 15
1.3 Fundamentals of Diffusive Mass Transfer 17
1.3.1 Species Mass Conservation 17
1.3.2 Diffusive Mass Flux and Fick's Law 18
1.3.3 Species Mass Conservation When Fick's Law Applies 19
1.3.4 Other Types of Diffusion 20
1.3.5 Diffusion in Multicomponent Mixtures 20
1.4 Boundary and Interfacial Conditions 22
1.4.1 General Discussion 22
1.4.2 Gas–Liquid Interphase 24
1.4.3 Interfacial Temperature 24
1.4.4 Sparingly Soluble Gases 27
1.4.5 Convention for Thermal and Mass Transfer Boundary Conditions 30
1.5 Transport Properties 31
1.5.1 Mixture Rules 31
1.5.2 Transport Properties of Gases and the Gas-Kinetic Theory 32
1.5.3 Diffusion of Mass in Liquids 37
1.6 The Continuum Flow Regime and Size Convention for Flow Passages 38
Problems 39

Table of Contents
More information

2 **Boundary Layers** 44
2.1 Boundary Layer on a Flat Plate 44
2.2 Laminar Boundary-Layer Conservation Equations 48
2.3 Laminar Boundary-Layer Thicknesses 51
2.4 Boundary-Layer Separation 53
2.5 Nondimensionalization of Conservation Equations and Similitude 54
Problems 58

3 **External Laminar Flow: Similarity Solutions for Forced Laminar Boundary Layers** 61
3.1 Hydrodynamics of Flow Parallel to a Flat Plate 61
3.2 Heat and Mass Transfer During Low-Velocity Laminar Flow Parallel to a Flat Plate 65
3.3 Heat Transfer During Laminar Parallel Flow Over a Flat Plate With Viscous Dissipation 71
3.4 Hydrodynamics of Laminar Flow Past a Wedge 73
3.5 Heat Transfer During Laminar Flow Past a Wedge 78
3.6 Effects of Compressibility and Property Variations 80
Problems 85

4 **Internal Laminar Flow** 90
4.1 Couette and Poiseuille Flows 90
4.2 The Development of Velocity, Temperature, and Concentration Profiles 94
4.2.1 The Development of Boundary Layers 94
4.2.2 Hydrodynamic Parameters of Developing Flow 97
4.2.3 The Development of Temperature and Concentration Profiles 100
4.3 Hydrodynamics of Fully Developed Flow 103
4.4 Fully Developed Hydrodynamics and Developed Temperature or Concentration Distributions 107
4.4.1 Circular Tube 107
4.4.2 Flat Channel 110
4.4.3 Rectangular Channel 113
4.4.4 Triangular Channel 113
4.4.5 Concentric Annular Duct 114
4.5 Fully Developed Hydrodynamics, Thermal or Concentration Entrance Regions 117
4.5.1 Circular Duct With Uniform Wall Temperature Boundary Conditions 117
4.5.2 Circular Duct With Arbitrary Wall Temperature Distribution in the Axial Direction 124
4.5.3 Circular Duct With Uniform Wall Heat Flux 126
4.5.4 Circular Duct With Arbitrary Wall Heat Flux Distribution in the Axial Coordinate 129

Table of Contents
More information

4.5.5 Flat Channel With Uniform Heat Flux Boundary Conditions 130
4.5.6 Flat Channel With Uniform Wall Temperature Boundary Conditions 132
4.5.7 Rectangular Channel 135
4.6 Combined Entrance Region 135
4.7 Effect of Fluid Property Variations 137
Appendix 4A: The Sturm–Liouville Boundary-Value Problems 141
Problems 141

5 **Integral Methods** 151
5.1 Integral Momentum Equations 151
5.2 Solutions to the Integral Momentum Equation 153
5.2.1 Laminar Flow of an Incompressible Fluid Parallel to a Flat Plate Without Wall Injection 153
5.2.2 Turbulent Flow of an Incompressible Fluid Parallel to a Flat Plate Without Wall Injection 156
5.2.3 Turbulent Flow of an Incompressible Fluid Over a Body of Revolution 158
5.3 Energy Integral Equation 159
5.4 Solutions to the Energy Integral Equation 161
5.4.1 Parallel Flow Past a Flat Surface 161
5.4.2 Parallel Flow Past a Flat Surface With an Adiabatic Segment 163
5.4.3 Parallel Flow Past a Flat Surface With Arbitrary Wall Surface Temperature or Heat Flux 165
5.5 Approximate Solutions for Flow Over Axisymmetric Bodies 167
Problems 173

6 **Fundamentals of Turbulence and External Turbulent Flow** 177
6.1 Laminar–Turbulent Transition and the Phenomenology of Turbulence 177
6.2 Fluctuations and Time (Ensemble) Averaging 180
6.3 Reynolds Averaging of Conservation Equations 181
6.4 Eddy Viscosity and Eddy Diffusivity 183
6.5 Universal Velocity Profiles 185
6.6 The Mixing-Length Hypothesis and Eddy Diffusivity Models 188
6.7 Temperature and Concentration Laws of the Wall 192
6.8 Kolmogorov Theory of the Small Turbulence Scales 196
6.9 Flow Past Blunt Bodies 200
Problems 205

7 **Internal Turbulent Flow** 208
7.1 General Remarks 208
7.2 Hydrodynamics of Turbulent Duct Flow 211
7.2.1 Circular Duct 211
7.2.2 Noncircular Ducts 217

Table of Contents
More information

7.3 Heat Transfer: Fully Developed Flow 218
7.3.1 Universal Temperature Profile in a Circular Duct 218
7.3.2 Application of Eddy Diffusivity Models for Circular Ducts 221
7.3.3 Noncircular Ducts 224
7.4 Heat Transfer: Fully Developed Hydrodynamics, Thermal Entrance Region 224
7.4.1 Circular Duct With Uniform Wall Temperature or Concentration 224
7.4.2 Circular Duct With Uniform Wall Heat Flux 226
7.4.3 Some Useful Correlations for Circular Ducts 229
7.4.4 Noncircular Ducts 231
7.5 Combined Entrance Region 231
Problems 238

8 **Effect of Transpiration on Friction, Heat, and Mass Transfer** 243
8.1 Couette Flow Film Model 243
8.2 Gas–Liquid Interphase 248
Problems 256

9 **Analogy Among Momentum, Heat, and Mass Transfer** 258
9.1 General Remarks 258
9.2 Reynolds Analogy 259
9.3 Prandtl–Taylor Analogy 261
9.4 Von Karman Analogy 263
9.5 The Martinelli Analogy 265
9.6 The Analogy of Yu et al. 265
9.7 Chilton–Colburn Analogy 267
Problems 272

10 **Natural Convection** 275
10.1 Natural-Convection Boundary Layers on Flat Surfaces 275
10.2 Phenomenology 278
10.3 Scaling Analysis of Laminar Boundary Layers 280
10.4 Similarity Solutions for a Semi-Infinite Vertical Surface 285
10.5 Integral Analysis 289
10.6 Some Widely Used Empirical Correlations for Flat Vertical Surfaces 294
10.7 Natural Convection on Horizontal Flat Surfaces 295
10.8 Natural Convection on Inclined Surfaces 297
10.9 Natural Convection on Submerged Bodies 298
10.10 Natural Convection in Vertical Flow Passages 300
10.11 Natural Convection in Enclosures 304
10.12 Natural Convection in a Two-Dimensional Rectangle With Heated Vertical Sides 305
10.13 Natural Convection in Horizontal Rectangles 307
10.14 Natural Convection in Inclined Rectangular Enclosures 309

Table of Contents
More information

10.15 Natural Convection Caused by the Combined Thermal and Mass Diffusion Effects 311
10.15.1 Conservation Equations and Scaling Analysis 311
10.15.2 Heat and Mass Transfer Analogy 316
10.16 Solutions for Natural Convection Caused by Combined Thermal and Mass Diffusion Effects 317
Problems 327

11 **Mixed Convection** 332
11.1 Laminar Boundary-Layer Equations and Scaling Analysis 332
11.2 Solutions for Laminar Flow 337
11.3 Stability of Laminar Flow and Laminar–Turbulent Transition 341
11.4 Correlations for Laminar External Flow 343
11.5 Correlations for Turbulent External Flow 348
11.6 Internal Flow 349
11.6.1 General Remarks 349
11.6.2 Flow Regime Maps 351
11.7 Some Empirical Correlations for Internal Flow 351
Problems 358

12 **Turbulence Models** 362
12.1 Reynolds-Averaged Conservation Equations and the Eddy Diffusivity Concept 362
12.2 One-Equation Turbulence Models 364
12.3 Near-Wall Turbulence Modeling and Wall Functions 367
12.4 The K–ε Model 371
12.4.1 General Formulation 371
12.4.2 Near-Wall Treatment 374
12.4.3 Turbulent Heat and Mass Fluxes 376
12.5 Other Two-Equation Turbulence Models 376
12.6 The Reynolds Stress Transport Models 377
12.6.1 General Formulation 377
12.6.2 Simplification for Heat and Mass Transfer 380
12.6.3 Near-Wall Treatment of Turbulence 380
12.6.4 Summary of Equations and Unknowns 381
12.7 Algebraic Stress Models 381
12.8 Turbulent Models for Buoyant Flows 382
12.9 Direct Numerical Simulation 385
12.10 Large Eddy Simulation 390
12.11 Computational Fluid Dynamics 394
Problems 395

13 **Flow and Heat Transfer in Miniature Flow Passages** 397
13.1 Size Classification of Miniature Flow Passages 397
13.2 Regimes in Gas-Carrying Vessels 399
13.3 The Slip Flow and Temperature-Jump Regime 402
13.4 Slip Couette Flow 406

13.5 Slip Flow in a Flat Channel 408
13.5.1 Hydrodynamics of Fully Developed Flow 408
13.5.2 Thermally Developed Heat Transfer, UHF 410
13.5.3 Thermally Developed Heat Transfer, UWT 413
13.6 Slip Flow in Circular Microtubes 415
13.6.1 Hydrodynamics of Fully Developed Flow 415
13.6.2 Thermally Developed Flow Heat Transfer, UHF 416
13.6.3 Thermally Developed Flow Heat Transfer, UWT 418
13.6.4 Thermally Developing Flow 420
13.7 Slip Flow in Rectangular Channels 422
13.7.1 Hydrodynamics of Fully Developed Flow 422
13.7.2 Heat Transfer 424
13.8 Slip Flow in Other Noncircular Channels 426
13.9 Compressible Flow in Microchannels with Negligible Rarefaction 427
13.9.1 General Remarks 427
13.9.2 One-Dimensional Compressible Flow of an Ideal Gas in a Constant-Cross-Section Channel 428
13.10 Continuum Flow in Miniature Flow Passages 431
Problems 441

APPENDIX A: Constitutive Relations in Polar Cylindrical and Spherical Coordinates 449

APPENDIX B: Mass Continuity and Newtonian Incompressible Fluid Equations of Motion in Polar Cylindrical and Spherical Coordinates 451

APPENDIX C: Energy Conservation Equations in Polar Cylindrical and Spherical Coordinates for Incompressible Fluids With Constant Thermal Conductivity 453

APPENDIX D: Mass-Species Conservation Equations in Polar Cylindrical and Spherical Coordinates for Incompressible Fluids 454

APPENDIX E: Thermodynamic Properties of Saturated Water and Steam . . . 456

APPENDIX F: Transport Properties of Saturated Water and Steam 458

APPENDIX G: Properties of Selected Ideal Gases at 1 Atmosphere 459

APPENDIX H: Binary Diffusion Coefficients of Selected Gases in Air at 1 Atmosphere 465

APPENDIX I: Henry's Constant, in bars, of Dilute Aqueous Solutions of Selected Substances at Moderate Pressures 466

APPENDIX J: Diffusion Coefficients of Selected Substances in Water at Infinite Dilution at 25 °C 467

APPENDIX K: Lennard–Jones Potential Model Constants for Selected Molecules 468

APPENDIX L: Collision Integrals for the Lennard–Jones Potential Model . . 469

APPENDIX M: Some RANS-Type Turbulence Models 470
M.1 The Spalart–Allmaras Model 470
M.2 The K–ω Model 472
M.3 The K–ε Nonlinear Reynolds Stress Model 475
M.4 The RNG K–ε Model 477
M.5 The Low-Re RSM of Launder and Shima 478

APPENDIX N: Physical Constants 480

APPENDIX O: Unit Conversions 482

APPENDIX P: Summary of Important Dimensionless Numbers 485

APPENDIX Q: Summary of Some Useful Heat Transfer and Friction-Factor Correlations 487
