	<i>Preface</i>	<i>page xi</i>
<b>1</b>	<b>Introduction to electronic package engineering</b>	<b>1</b>
	1.1 A brief discussion of standard packages	2
	1.2 Package design requirements	3
	1.2.1 Electrical requirements	3
	1.2.2 Weight requirements	5
	1.2.3 Package physical requirements	6
	1.2.4 Package thermal requirements	6
	1.2.5 Package reliability requirements	7
	1.2.6 Package material requirements	8
	1.3 Package design process	9
	1.3.1 Technology selection	9
	1.3.2 Computer-aided design (CAD)	10
	1.3.3 Test and measurement	13
	1.4 Concluding remarks	14
	References	14
<b>2</b>	<b>Characteristics of liquid crystal polymer (LCP)</b>	<b>16</b>
	Morgan J. Chen, Kunia Aihara, Cheng Chen, Anh-Vu H. Pham	
	2.1 LCP chemistry	17
	2.1.1 Liquid crystalline characteristics	17
	2.1.2 Polymeric characteristics	18
	2.2 Electrical characteristics	20
	2.2.1 Dielectric and loss tangent characterization from DC to 60 GHz	20
	2.2.2 Dielectric and loss tangent characterization from 30 to 110 GHz	22
	2.2.3 Electrical characteristics over humidity	24
	2.3 Physical characteristics	27
	2.3.1 Dimensional stability	27
	2.3.2 Adhesion strengths for package integrity	29
	2.3.3 Flexibility	31

2.4	Environmental characterization	34
2.4.1	Outgassing tests	34
2.4.2	Permeability and leak-rate package testing	36
2.5	Conclusions	38
	References	39
<b>3</b>	<b>Fabrication techniques for processing LCP</b>	<b>41</b>
3.1	Introduction to LCP material availability	41
3.1.1	Resin and pellet form	41
3.1.2	Unclad LCP laminate form	42
3.1.3	Copper-clad LCP laminate form	42
3.2	Metallization on LCP	43
3.2.1	Metal adhesion	44
3.2.2	Casting	44
3.2.3	Sputter-plating	44
3.2.4	Metal lamination	44
3.3	Standard PCB processing	46
3.3.1	PCB standard cleaning	46
3.3.2	PCB standard photolithography	47
3.3.3	PCB standard drilling and milling	47
3.3.4	PCB standard multilayer lamination	50
3.3.5	Surface finish	55
3.3.6	Roll-to-roll processing	57
3.4	Advanced LCP processes	58
3.4.1	Handling	58
3.4.2	Advanced LCP machining techniques	59
3.4.3	LCP air-cavity lid formation	60
3.4.4	Selective sealing	63
3.4.5	Evaluating planarity after LCP lid sealing	67
3.4.6	LCP molding techniques	68
3.5	Chapter summary	70
	References	70
<b>4</b>	<b>LCP for wafer-level chip-scale MEMS</b>	<b>72</b>
4.1	Wafer-level chip-scale packaging of an RF MEMS switch	73
4.1.1	Packaging steps for LCP-encapsulated RF MEMS	74
4.1.2	Package electrical design	77
4.1.3	Package electrical measurements	82
4.2	Hybrid phase shifter on multilayer organic multi-chip module	83
4.2.1	Description of processes	85
4.2.2	Design of a multi-chip module MEMS phase shifter	85
4.2.3	Packaged phase shifter measurements	89

vii

4.3	Chapter summary	94
	References	94
<b>5</b>	<b>LCP for surface mount interconnects, packages, and modules</b>	<b>97</b>
5.1	Design process for a thin-film LCP surface mount package and feed-through	98
5.1.1	Via transition	100
5.1.2	Microstrip line to bond wire transition	102
5.1.3	Grounded coplanar waveguide (CPWG) below package base	105
5.1.4	Coplanar waveguide probe launch on test board	107
5.1.5	Electrical performance sensitivity of package trace thickness	109
5.1.6	Theoretical attenuation of a package feed-through	111
5.1.7	Fabrication of LCP package base	114
5.1.8	Feed-through measurement and model extraction	114
5.1.9	Insertion loss roll-off beyond 40 GHz	117
5.1.10	Package isolation measurement	119
5.1.11	Measurement and simulation of packaged amplifier	119
5.2	DC blocked coupled-line interconnect	122
5.2.1	Coupled-line interconnect design	122
5.2.2	Coupled-line interconnect fabrication and measurement results	127
5.3	DC blocked lumped-element coupled interconnect	132
5.3.1	Lumped-element interconnect design	132
5.3.2	Lumped-element interconnect sensitivity analysis	136
5.3.3	Lumped-element interconnect measurement results	141
5.4	Ka-band down-converter multi-chip module (MCM) using LCP SMT packages	142
5.4.1	Schematic diagram, chip components, and cross-section of module	142
5.4.2	Design and simulation of signal traces	144
5.4.3	Assembly and measurements of Ka-band down-converter module	147
5.5	Chapter summary	154
	References	155
	Appendix Conductor and dielectric attenuation	156
<b>6</b>	<b>LCP for passive components</b>	<b>160</b>
	Hai Ta, Morgan J. Chen, Kunia Aihara, Andy C. Chen, Jia-Chi Samuel Chieh, Anh-Vu H. Pham	
6.1	Broadband LCP Marchand balun	160
6.1.1	Balun background	161
6.1.2	Fabrication of and lamination process for the LCP balun	162
6.1.3	Design and simulation of an LCP balun	165
6.1.4	Electrical measurements on an LCP balun	167

6.1.5	Defected ground structure balun	173
6.1.6	LCP balun summary	177
6.2	Wilkinson power combiner section	177
6.2.1	Background and design	178
6.2.2	Measurement	180
6.2.3	LCP Wilkinson summary	181
6.3	Folded broadband LCP hybrid coupler	184
6.3.1	Design of the hybrid coupler	185
6.3.2	Measurement results	187
6.3.3	Hybrid coupler summary	189
6.4	Chapter summary	190
	References	190
<b>7</b>	<b>LCP for system design</b>	<b>193</b>
	Morgan J. Chen, Kunia Aihara, Andy C. Chen, Jia-Chi Samuel Chieh, Anh-Vu H. Pham	
7.1	Wideband thin-film amplitude-compensated LTD circuits implementing MEMS switches	193
7.1.1	LTD design	194
7.1.2	Fabrication and measurement results	199
7.1.3	LTD module summary	200
7.2	Broadband push-pull PA	202
7.2.1	Push-pull PA design and fabrication	202
7.2.2	Push-pull PA module measurement without EMMN	203
7.2.3	Measurement results for a push-pull PA with EMMN	208
7.2.4	Push-pull PA enabled by LCP summary	209
7.3	Receiver module with phased-array antenna	210
7.3.1	Overview of phased-array technology	211
7.3.2	Antenna design	214
7.3.3	Passive antenna array design	215
7.3.4	Active phased-array module	216
7.3.5	Phased-array antenna receiver module conclusions	223
7.4	Chapter summary	223
	References	224
<b>8</b>	<b>LCP reliability</b>	<b>226</b>
8.1	Package vehicle for environmental testing	227
8.2	Temperature testing	229
8.2.1	Thermal cycling	229
8.2.2	Non-operating rapid thermal transition	230
8.2.3	Non-operating high-temperature storage	231
8.2.4	Non-operating thermal shock	232

8.3	Moisture and temperature stressing	233
8.3.1	Operating humidity exposure (85°C/85%)	233
8.3.2	Non-operating moisture resistance	234
8.3.3	Freeze–expansion stressing	235
8.4	Mechanical tests	236
8.4.1	Non-operating mechanical shock	236
8.4.2	Non-operating vibration	237
8.5	Conclusions	238
	References	240
	<i>Abbreviations, acronyms, and symbols</i>	242
