	<i>Preface</i>	<i>page xi</i>
	<i>Acknowledgments</i>	<i>xiii</i>
<b>1</b>	<b>Mathematical background</b>	<b>1</b>
	1.1 Cartesian and spherical coordinates	1
	1.2 Complex numbers	1
	1.3 Vector relationships	4
	1.4 Matrices and tensors	8
	1.5 Conservative force, field, and potential	17
	1.6 The divergence theorem (Gauss's theorem)	18
	1.7 The curl theorem (Stokes' theorem)	20
	1.8 Poisson's equation	23
	1.9 Laplace's equation	26
	1.10 Power series	28
	1.11 Leibniz's rule	32
	1.12 Legendre polynomials	32
	1.13 The Legendre differential equation	34
	1.14 Rodrigues' formula	41
	1.15 Associated Legendre polynomials	43
	1.16 Spherical harmonic functions	49
	1.17 Fourier series, Fourier integrals, and Fourier transforms	52
	Further reading	58
<b>2</b>	<b>Gravitation</b>	<b>59</b>
	2.1 Gravitational acceleration and potential	59
	2.2 Kepler's laws of planetary motion	60
	2.3 Gravitational acceleration and the potential of a solid sphere	66
	2.4 Laplace's equation in spherical polar coordinates	69
	2.5 MacCullagh's formula for the gravitational potential	74
	Further reading	85

<b>3</b>	<b>Gravity</b>	86
	3.1 The ellipticity of the Earth's figure	86
	3.2 The geopotential	88
	3.3 The equipotential surface of gravity	91
	3.4 Gravity on the reference spheroid	96
	3.5 Geocentric and geographic latitude	102
	3.6 The geoid	106
	Further reading	115
<b>4</b>	<b>The tides</b>	116
	4.1 Origin of the lunar tide-raising forces	116
	4.2 Tidal potential of the Moon	119
	4.3 Love's numbers and the tidal deformation	124
	4.4 Tidal friction and deceleration of terrestrial and lunar rotations	130
	Further reading	136
<b>5</b>	<b>Earth's rotation</b>	137
	5.1 Motion in a rotating coordinate system	138
	5.2 The Coriolis and Eötvös effects	140
	5.3 Precession and forced nutation of Earth's rotation axis	142
	5.4 The free, Eulerian nutation of a rigid Earth	155
	5.5 The Chandler wobble	157
	Further reading	169
<b>6</b>	<b>Earth's heat</b>	170
	6.1 Energy and entropy	171
	6.2 Thermodynamic potentials and Maxwell's relations	172
	6.3 The melting-temperature gradient in the core	176
	6.4 The adiabatic temperature gradient in the core	178
	6.5 The Grüneisen parameter	179
	6.6 Heat flow	182
	Further reading	197
<b>7</b>	<b>Geomagnetism</b>	198
	7.1 The dipole magnetic field and potential	198
	7.2 Potential of the geomagnetic field	200
	7.3 The Earth's dipole magnetic field	205
	7.4 Secular variation	213
	7.5 Power spectrum of the internal field	214
	7.6 The origin of the internal field	217
	Further reading	225
<b>8</b>	<b>Foundations of seismology</b>	227
	8.1 Elastic deformation	227

*Contents* ix

8.2	Stress	228
8.3	Strain	233
8.4	Perfectly elastic stress–strain relationships	239
8.5	The seismic wave equation	244
8.6	Solutions of the wave equation	252
8.7	Three-dimensional propagation of plane P- and S-waves	254
	Further reading	258
	<i>Appendix A</i> Magnetic poles, the dipole field, and current loops	259
	<i>Appendix B</i> Maxwell's equations of electromagnetism	265
	References	276
	Index	278
