Figures

1.1	Accumulative number of peer reviewed articles with autobiographical memory as a keyword from 1980 to 2010.	<i>page 2</i>
2.1	A schematic of the basic systems model.	12
2.2	The time course of fMRI responses during the access and construction of word-cued autobiographical memories.	16
2.3	A hypothetical set of developmental trajectories.	17
3.1	Phases of remembering problematic experiences.	43
4.1	The embedding of episodic memories in autobiographical memory knowledge structures.	56
4.2	Further locating the SMS in the sociocultural world. Figure adopted from Markus and Kitayama (1994, 2010).	60
4.3	The role of autonomous and relatedness goals in autobiographical remembering.	62
5.1	The relation between memory terms.	72
7.1	Schematic of the brain regions typically involved in autobiographical memory retrieval.	117
7.2	Complex retrieval of autobiographical memory (AM).	120
7.3	Self-referential processes in autobiographical memory (AM).	124
7.4	Recollection and familiarity processes in autobiographical memory (AM).	128
8.1	Phases of the experimental procedure.	154
9.1	Percentage of response type as function of estimated year for World War II-generation samples from the Netherlands, Denmark, Canada, and the USA.	166
10.1	A theoretical model of donation decisions.	195
11.1	Average narrative breadth scores, reflecting the number of elements included in narratives, at each of ages 7, 8, 9, 10, 11, 19, and 35 years (maximum = 8). Data from Bauer and Larkina (2011).	210

List of figures	xi
11.2 The percentage of events recalled by children 66 months of age, from 1 to 47 months in the past, when the children were 65 to 19 months of age. Data from Cleveland and Reese (2008).	212
11.3 The percentage of events experienced at age 3 years (i.e., age at first interview) and recalled by children 1.5 to 5.5 years later, when children were 4.5 to 8.5 years of age. Data from time points 6.5 to 8.5 from Van Abbema and Bauer (2005). Data from time points 4.5 and 5.5 are unpublished.	213
13.1 Timeline model of the multiple influences on memory construction.	250
17.1 Autobiographical remembering and episodic future thinking taking place along culturally structured dimensions for time, space, and social relations, and varying in range and complexity between human adults, children, and nonhuman animals. Autobiographical remembering and episodic future thinking can be both voluntary (strategic) and involuntary (spontaneous). Adapted with permission from Berntsen, 2009, Figure 8.1.	335

Tables

5.1 Frequency of remembered, known, and forgotten episodes and how many (in percentages) were rated as nontrivial, specific, and retold	<i>page 83</i>
8.1 Design of retrieval-induced forgetting (RIF) experiments	150
9.1 Examples of historically defined autobiographical references, immigration references, and personal references from the Dutch immigrant sample	165
11.1 Ages of earliest memories of adults, and adolescents and children, estimated from retrospective tests	215
11.2 Fit statistics for the power and exponential functions applied to data from Bauer and Larkina (2011)	217
