Accept that orthodox psychological
instruments never discover
phenomena, 151
Acquiring the skill of bracketing of
presuppositions is necessarily a
far-from-straightforward endeavor, 382
Aim at pristine experience, 50, 68, 217
Appreciate subjunctification, 116, 123
Apprehending and describing experience
requires skill, 24
Ask about moments, 44
Avoid leading the witness, 395
Avoid ungrounded, premature, or otherwise
faux generalities, 202
Balance (forward looking) iterative training
with (backward looking) data
collection, 210
Be open to all phenomena, 394
Be open to the unknown, 395
Be skeptical about reports of experience, 45
Be skeptical of general accounts of experience,
no matter how fervently held, no matter
how competent the holder, no matter
how plausible, 277
Bracket presuppositions, 133, 391
Index

Learn how to observe in neutral territory, 260
Let phenomena emerge gradually, organically, 397, 398, 399, 401
Lightly hold observations, 151
Limit ourselves to talk that has been adequately differentiated, 197
Maintain a level playing field, 85, 392
Make distinctions when and where distinctions are important, 173
Manage retrospection, 44, 57
Particulars can lead to generalities, but generalities cannot lead to particulars, 46, 65, 202
People hide their experience, 23
Presuppositions are always personal, 381
Presuppositions are never noticed, 181
Presuppositions can be explored, 382
Pre-training about what might be observed is inimical, 163
Protect privacy, 273
Recognize that iterative training is inherently frustrating, 173
Relentlessly distinguish between diamonds and glass, 348
Relentlessly pursue concrete moments, 58, 65, 84
Remove ambiguities, 45, 299
Resist anything that is interesting, 398
Rule out everything that is not directly experienced, 53, 56, 65, 68, 207
Start nowhere, 391
Subjects (initially) do not follow instructions, 166, 214
Subjects (initially) don't bracket presuppositions, 170
Subjects (initially) don't distinguish between apprehension and theorizing, 168
Subjects (initially) don't know how to describe experience, 167
Subjects (initially) don't know what a moment is, 167
Subjects (initially) don't know what experience is, 167
Subjects (initially) don't know what the moment of the beep is, 169
Subjects (initially) don't observe skillfully, 172
Subjects (initially) may be reluctant to describe experience, 168
Subjects are co-researchers, 84
Subjects say things that are not true, 82
That one can experience X does not necessarily imply that one frequently does experience X, 140

Constraint (cont.)
Bracket the influence of theory, 44
Carefully disambiguate the usage of ‘feeling’, 299
Carefully disambiguate the usage of ‘thinking’, 391
Casual characterizations of experience are often not accurate, 24
Clarify rather than interpret, 84
Clarify the details, 86, 209, 223
Clarify what is meant by ‘experience’, 45
Clearly differentiate between state, knowledge of that state, and experience, 134
Cleave to pristine experience, 217
Concede imperfection, 50
Concede incompleteness, 54
Consciousness science proficiency does not facilitate and might actively interfere with the ability to observe pristine experience, 201, 207
Develop mechanisms to help bracket presuppositions, 54
Develop the interviewer's abilities, 60
Develop the subject's abilities, 60
Distinguish pristine experience from the welter of potential experiences, 53
Do not trust self-characterizations of experience, 138
Don't get captured, 403
Don't judge others by yourself, 32, 42, 135, 136, 138, 145, 147, 203, 233, 281, 288, 321, 396, 408
Drag your feet, 397
Eliminate mentalisms, 199, 332
Embrace the frustration, 278
Experience changes dramatically and quickly, 24
Experience is apprehensible, 24
Experience is detailed, 25
Experience is evanescent, 24
Experience is not essence, 24
Experience reveals something about a person, 24
Getting to the experience-at-the-moment can be quite difficult, 93
Idiosyncratic ways of speaking about experience often (but not always) reflect idiosyncratic experience, 264
If the details don't cohere, be skeptical of the experience, 209
It is possible to apprehend inner experience in high fidelity, 376
It is risky to infer inner experience from external behavior, 23
It's risky to predefine the phenomena that will emerge from an investigation, 103
Iteration has to be specifically confrontational, 212

It is possible to apprehend inner experience in high fidelity, 376
It is risky to infer inner experience from external behavior, 23
It's risky to predefine the phenomena that will emerge from an investigation, 103
Iteration has to be specifically confrontational, 212
The apprehension of another's pristine experience is a skilled performance art, 213

The exploration of experience probably has to be a first-person-plural endeavor, 46, 151

The exploration of pristine experience has personal and interpersonal risks, 208

The exploration of pristine experience has to be iterative, 84, 91, 152

The exploration of pristine experience is a personal endeavor, 69

The exploration of pristine experience is fundamentally idiographic, 52, 58, 394

The fact that the high-fidelity apprehension of inner experience is possible does not imply that everyone can do it, 381

The high fidelity apprehension of inner experience may require long and arduous practice, 379

The narrative is a distraction from apprehending experience, 207

The plausible is the enemy of the truth, 111

The required level of fidelity depends on the aim of the investigation, 378

The subject cannot be counted upon to judge whether an interviewer's account is of high fidelity, 377

There is no certain, formulaic way of determining that a description is faithful, 378

There is no guarantee that an interviewer will apprehend in high fidelity, even when the interviewing is skillful, 376

There is no safety in numbers, 43

Understand how people typically describe inner experience, 391, 393

Understand the usage, 403

Use open-beginninged probes, 161

You can't find out about a phenomenon unless you talk about the phenomenon, 44, 151
