### 1 Introduction

1.1 Fundamental stellar properties 1
1.2 Determination of stellar mass 4
1.3 Kinetic theory 7
1.4 Special relativity 12
1.5 Image processing 21
Exercises 27

### 2 Stellar atmospheres

2.1 Radiative transfer and the flow of photons through matter 29
2.2 Formal solution of radiative transfer 34
2.3 The gray-body approximation 40
2.4 Continuous opacity in a real hydrogen star 48
2.5 The case of spectrum lines 51
Exercises 57

### 3 Stellar interiors

3.1 The hydrostatic model 59
3.2 The polytropic star 63
3.3 Stellar populations 70
3.4 The virial theorem and stellar structure 78
3.5 Fusion in the stellar core 87
3.6 Beyond the polytropic model 96
Exercises 102

### 4 Extreme classical stars

4.1 Atmospheres beyond local thermodynamic equilibrium 104
4.2 Expanding atmospheres and the Sobolev method 112
4.3 Properties of gas degeneracy 124
4.4 White dwarfs 129
4.5 Neutron stars 137
Exercises 141

### 5 General relativity and applications

5.1 From special relativity to general relativity 143
## Contents

5.2 Mathematical toolbox 148  
5.3 Einstein’s field equations 154  
5.4 Solving Einstein’s equations 160  
5.5 Tests of general relativity 167  
5.6 Gravitational waves 178  
Exercises 185

6 Binaries and clusters 186  
6.1 Variational mechanics 186  
6.2 The N-body problem 193  
6.3 The solar system 198  
6.4 The Trapezium system 206  
6.5 Chaotic systems 213  
Exercises 218

7 Astrophysical plasmas 220  
7.1 Charges in cold plasmas 220  
7.2 Photons in cold plasmas 225  
7.3 Generalized magnetoionic radio wave propagation 233  
7.4 Pulsar signals as probes of the interstellar medium 238  
7.5 Warm plasmas 244  
7.6 Solar wind 254  
Exercises 260

8 Galaxies 263  
8.1 The existence of dark matter 263  
8.2 Revisiting the Trapezium cluster 272  
8.3 The Hénon–Heiles equations 281  
8.4 The central black hole of the Milky Way 283  
8.5 Spiral density waves 289  
8.6 The interplay of gas and dust 294  
8.7 Galactic mergers 306  
Exercises 307

9 Cosmic structures 309  
9.1 The Hubble law 309  
9.2 Quasars and radio galaxies 314  
9.3 Synchrotron radiation 321  
9.4 Distribution of galaxies 326  
9.5 Extragalactic bending of light 333  
9.6 The cosmic microwave background 339  
9.7 Cosmological models 346  
Exercises 354
