Contributors	<i>page</i> ix
Preface	xi
Introduction	xiii
Part One: Inside Our Computable World, and the Mathematics of Universality	1
1 Algorithms, Equations, and Logic	4
<i>Martin Davis</i>	
References	18
2 The Forgotten Turing	20
<i>J.M.E. Hyland</i>	
References	32
3 Turing and the Primes	34
<i>Andrew R. Booker</i>	
References	52
4 Cryptography and Computation after Turing	53
<i>Ueli Maurer</i>	
4.1 Introduction	54
4.2 Cryptography	55
4.3 Computation	57
4.4 The Diffie–Hellman key-agreement protocol	58
4.5 Discrete logarithms and other computational problems on groups	62
4.6 Discrete logarithm algorithms	63
4.7 Abstract models of computation	66
4.8 Proving security: lower bounds for complexity	68
4.9 Conclusions	75
References	76

vi	<i>Contents</i>	
5	Alan Turing and Enigmatic Statistics	78
	<i>Kanti V. Mardia and S. Barry Cooper</i>	
5.1	Introduction	78
5.2	Weight of evidence and empirical Bayes	80
5.3	Alignment of letters	81
5.4	Release by GCHQ of two key Turing reports	83
5.5	Turing's statistics in context	84
5.6	Morphogenesis, statistics, and Alan Turing's AI	87
	References	88
	Part Two: The Computation of Processes, and Not Computing the Brain	90
6	What Alan Turing Might Have Discovered	92
	<i>Stephen Wolfram</i>	
	References	105
7	Designed versus Intrinsic Computation	106
	<i>Christof Teuscher</i>	
7.1	Top-down versus bottom-up design	106
7.2	Intrinsic versus designed computation	107
7.3	Turing's bottom-up computing approach	108
7.4	From intrinsic to designed computation	111
7.5	Outlook	113
	References	115
8	Dull Rigid Human meets Ace Mechanical Translator	117
	<i>Douglas Richard Hofstadter</i>	
	Part Three: The Reverse Engineering Road to Computing Life	129
9	Turing's Theory of Developmental Pattern Formation	131
	<i>Philip K. Maini, Thomas E. Woolley, Eamonn A. Gaffney and Ruth E. Baker</i>	
9.1	Introduction	131
9.2	Some developmental applications	135
9.3	Extending Turing	137
9.4	Critiquing Turing	138
9.5	The impact of Turing	141
	References	142
10	Walking the Tightrope: The Dilemma of Hierarchical Instabilities in Turing's Morphogenesis	144
	<i>Richard Gordon</i>	
	References	155

Contents

vii

	Part Four: Biology, Mind, and the Outer Reaches of Quantum Computation	160
11	Answering Descartes: Beyond Turing	163
	<i>Stuart Kauffman</i>	
	References	189
12	The Ghost in the Quantum Turing Machine	193
	<i>Scott Aaronson</i>	
	12.1 Introduction	195
	12.2 FAQ	202
	12.3 Knightian uncertainty and physics	226
	12.4 Freedom from the inside out	242
	12.5 Further objections	249
	12.6 Comparison with Penrose's views	261
	12.7 'Application' to Boltzmann brains	267
	12.8 Indexicality and freebits	269
	12.9 Is the freebit picture falsifiable?	273
	12.10 Conclusions	275
	12A Appendix: Defining 'freedom'	280
	12B Appendix: Prediction and Kolmogorov complexity	287
	12C Appendix: Knightian quantum states	291
	References	292
	Part Five: Oracles, Infinitary Computation, and the Physics of the Mind	297
13	Turing's 'Oracle': From Absolute to Relative Computability and Back	300
	<i>Solomon Feferman</i>	
	13.1 Introduction	300
	13.2 'Absolute' effective computability	301
	13.3 Relative effective computability over the natural numbers	306
	13.4 Uniform relative computability over the natural numbers	313
	13.5 Generalized recursion theory	316
	13.6 The role of notions of relative computability in actual computation	323
	Postscript	330
	References	331
14	Turing Transcendent: Beyond the Event Horizon	335
	<i>P.D. Welch</i>	
	14.1 The beginning	335
	14.2 Limit decidable	341

viii	<i>Contents</i>	
	14.3 Malament–Hogarth spacetimes	342
	14.4 Infinite ordinals: beyond arithmetical	344
	14.5 Returning to MH spacetimes	348
	14.6 The \aleph_0 -mind	349
	14.7 Infinite-time Turing machines	351
	14.8 Register machines and other generalisations	356
	14.9 Conclusions	359
	References	360
15	On Attempting to Model the Mathematical Mind	361
	<i>Roger Penrose</i>	
	15.1 Turing’s ordinal logics	361
	15.2 Mathematical trust	363
	15.3 Physical processes underlying mathematical understanding?	365
	15.4 Π -sentences	367
	15.5 Cautious oracles	369
	15.6 The operation of cautious-oracle devices	371
	15.7 A Gödel-type theorem for cautious-oracle devices	374
	15.8 Physical implications?	375
	References	377
	Afterword	379
