*Preface*  

**Part I Nanostructure design and structural properties of epitaxially grown quantum dots and nanowires**

1. Growth of III–V semiconductor quantum dots
   - *C. Schneider, S. Höfling and A. Forchel*  
     - 1.1 Introduction  
     - 1.2 Properties of semiconductor quantum dots  
     - 1.3 Epitaxial growth of quantum dots on GaAs substrates  
     - 1.4 Quantum dot growth on InP substrates  
     - 1.5 Conclusion  
     - References

2. Single semiconductor quantum dots in nanowires: growth, optics, and devices
   - *M. E. Reimer, N. Akopian, M. Barkelid, G. Bulgarini, R. Heeres, M. Hocevar, B. J. Witek, E. P. A. M. Bakkers and V. Zwiller*  
     - 2.1 Introduction  
     - 2.2 Nanowire quantum dot growth  
     - 2.3 Optical properties of nanowire quantum dots  
     - 2.4 Nanowire quantum dot devices  
     - References

3. Atomic-scale analysis of self-assembled quantum dots by cross-sectional scanning, tunneling microscopy, and atom probe tomography
   - *J. G. Keizer and P. M. Koenraad*  
     - 3.1 Introduction  
     - 3.2 Specimen preparation

---

### Contents

3.3 Quantum dot analysis by X-STM 42  
3.4 Application to control of quantum dot formation 45  
3.5 Outlook: atom probe tomography 55  
3.6 Conclusion 58  
References 58

### Part II  Manipulation of individual quantum states in quantum dots using optical techniques 61

4 Studies of the hole spin in self-assembled quantum dots using optical techniques  
  B. D. Gerardot and R. J. Warburton 63  
  4.1 Self-assembled quantum dots as host for spin qubits 63  
  4.2 Motivating factors for hole spins 64  
  4.3 Spectroscopy of few-level systems 67  
  4.4 Hole spin sample design 69  
  4.5 Spin initialization, manipulation, and read-out 73  
  4.6 Strength of the hole hyperfine interaction 79  
  4.7 Summary and outlook 80  
Acknowledgements 80  
References 81

5 Resonance fluorescence from a single quantum dot  
  A. N. Vamivakas, C. Matthiesen, Y. Zhao, C.-Y. Lu and M. Atatüre 86  
  5.1 Introduction 86  
  5.2 Resonance fluorescence from a two-level system 87  
  5.3 Observation of resonance fluorescence 89  
  5.4 Conclusion 100  
References 101

6 Coherent control of quantum dot excitons using ultra-fast optical techniques: the role of acoustic phonons  
  A. J. Ramsay and A. M. Fox 103  
  6.1 Introduction 103  
  6.2 Experimental methods 106  
  6.3 Candidate mechanisms for the intensity damping 109  
  6.4 Temperature-dependent measurements of Rabi rotations 110  
  6.5 Model of LA-phonon induced dephasing 112  
  6.6 Comparison of experiment to model 114  
  6.7 Outlook 115  
Acknowledgements 115  
References 115
7 Holes in quantum dot molecules: structure, symmetry, and spin
M. F. Doty and J. I. Climente
7.1 Introduction 118
7.2 Growth and spectroscopic characterization of QDMs 119
7.3 Anticrossings and the formation of molecular states 120
7.4 Spin projections and Zeeman splitting 122
7.5 Antibonding molecular ground states 126
7.6 Hole-spin mixing 128
7.7 Summary 132
References 132

Part III Optical properties of quantum dots in photonic cavities and plasmon-coupled dots

8 Deterministic light–matter coupling with single quantum dots
P. Senellart
8.1 QDs in cavities: basics, motivation, first demonstrations 137
8.2 Determininistic coupling of a QD to a cavity 138
8.3 An ultrabright source of entangled photon pairs 144
8.4 Some perspectives 149
References 150

9 Quantum dots in photonic crystal cavities
A. Faraon, D. Englund, I. Fushman, A. Majumdar and J. Vučković
9.1 Introduction 153
9.2 Quantum dots and photonic crystals 154
9.3 Experimental techniques 157
9.4 Probing the strong-coupling regime 161
9.5 Nonlinear optics at the single photon level 163
9.6 Applications and future directions 165
References 166

10 Photon statistics in quantum dot micropillar emission
M. Aßmann and M. Bayer
10.1 Introduction 169
10.2 Theoretical background 169
10.3 Experimental approaches 174
10.4 Experimental results 176
10.5 Summary and outlook 182
References 183

11 Nanoplasmonics with colloidal quantum dots
V. V. Temnov and U. Woggon
11.1 Introduction 185
### Contents

11.2 Optical and electronic properties of colloidal semiconductor quantum dots ........................................... 185  
11.3 Surface plasmons in low-dimensional metallic nanostructures ................................................................. 188  
11.4 Coupling of quantum dots to metal surfaces ............................................................................................. 191  
11.5 Practical application: QD-based all-optical plasmonic modulator ......................................................... 196  
11.6 Perspective: quantum optics with surface plasmons ............................................................................... 197  

References ...................................................................................................................................................... 197
