CONTENTS

Acknowledgements	<i>page</i> ix
Foreword	xi
Introduction	xv
1 Lessons from epidemiology	1
Incidence	1
Deaths	2
Patterns around the world: how many cancers and what sort?	3
Trends	11
Age	11
Where do we stand and is there any good news?	13
Conclusions	17
Key points	17
Future directions	18
Further reading: reviews	18
2 Causes of cancer	20
Introduction	20
Infection	21
Radiation	21
Ionising radiation	22
Radon	26
Ultraviolet radiation	28
Low-frequency magnetic fields	29
High-frequency magnetic fields (mobile phones)	30
Tobacco	31
Alcohol	33
Tea and coffee	35
Diet: epidemiological studies	35
Obesity	39
Stress	40
Conclusions	41
Key points	41
Future directions	42
Further reading: reviews	43

Contents

3	Signalling in normal cells	44
	Introduction	44
	Enzyme-coupled receptors	45
	Receptor tyrosine kinases (RTKs)	47
	Intracellular signalling from activated tyrosine kinase receptors	49
	Activating RAS and MAPK	51
	Sustained versus transient activation of RAS and MAPK	53
	Mitogenic activation of cell cycle progression	54
	MYC is a central regulator of cell growth and proliferation	55
	MYC and proliferation	56
	Cytokine receptors	58
	G-protein-coupled receptors	59
	Ligand-gated ion channel receptors	60
	Steroid hormones	61
	Conclusions	64
	Key points	65
	Future directions	65
	Further reading: reviews	65
4	'Cancer genes': mutations and cancer development	67
	Collecting mutations	67
	Genetic roulette	68
	The cancer genomic landscape	69
	Mutations in 'cancer genes': oncogenes and tumour suppressor genes	70
	Oncogenes	71
	The first human oncogene	72
	What turns a proto-oncogene into an oncogene?	73
	Tumour suppressor genes	86
	What does the retinoblastoma protein do?	88
	Tumour protein 53 (TP53 aka p53)	89
	p53, cell cycle arrest, apoptosis and MYC	90
	p53 and cancer	91
	p53 is not entirely a tumour suppressor	92
	DNA repair	93
	Hereditary cancers	94
	Hereditary breast cancer	94
	Hereditary colon cancer	95
	DNA repeats itself	96
	Polymorphisms and cancer	96
	Modulating gene expression without mutation: epigenetic changes	97
	Micro RNAs (miRNAs)	98
	Conclusions	100
	Key points	100
	Future directions	101
	Further reading: reviews	101

vii

Contents

5	What is a tumour?	103
	Introduction	103
	Benign tumours	104
	The benign–malignant boundary	107
	Types of malignant (non-benign) cancer	108
	What makes a cancer cell a cancer cell?	108
	Cancer cell characteristics	109
	Cell growth is largely independent of normal signals	110
	Resistance to inhibitory growth signals	111
	Resistance to cell death	112
	Unlimited replicative capacity	116
	Induction of angiogenesis	118
	Abnormal metabolism	122
	Inflammation and the immune system	132
	The uniqueness of malignancy	137
	Metastasis and metastatic potential	137
	How does cancer kill you?	147
	Conclusions	148
	Key points	149
	Future directions	150
	Further reading: reviews	150
6	Cancer signalling networks	153
	Introduction	153
	The central axis: ARF, MDM2, p53, INK4, RB1	155
	MYC and RAS	156
	Cancer and cell senescence	157
	Tumourigenic DNA viruses	158
	Signalling pathways that impact on the central axis	159
	Cellular responses during tumour development	174
	Signalling and systems biology	175
	Conclusions	176
	Key points	177
	Future directions	177
	Further reading: reviews	178
7	The future of cancer prevention, diagnosis and treatment	179
	The development of anti-cancer drugs	179
	Chemotherapeutic strategies for cancer	181
	Drug resistance	187
	Non-specific effects	188
	The efficacy of chemotherapy	189
	Cancer detection: tumour imaging and molecular imaging	189
	Molecular imaging	189

viii

Contents

Proteomics	196
Metabolomics	199
Gene expression profiling	200
Protein imaging	200
Nanotubes, graphene and nanocells	202
Conclusions	204
Key points	205
Future directions	205
Further reading: reviews	206
8 The future of cancer in the post-genomic era	209
Human genome sequencing	209
Whole genome sequencing (WGS) and cancer	215
Chromothripsis	218
Genomic partitioning	220
Genome-wide association (GWA) studies and inherited cancer predisposition	223
Therapeutic strategies for cancer driven by the sequencing revolution	224
Tailoring therapy on the basis of whole genome sequencing	225
Tumour biomarkers	230
Microfluidics and the isolation of circulating tumour cells	231
Drug development	232
The expanding field of cancer treatment	233
Balancing priorities	236
Conclusions	238
Key points	238
Future directions	239
Further reading: reviews	239
Appendix A <i>Tumour grading and staging</i>	241
Appendix B <i>Targets of specific anti-cancer drugs</i>	245
Appendix C <i>Classes of major oncoproteins</i>	252
Appendix D <i>Major tumour suppressor genes</i>	254
Appendix E <i>Ten major cancers at a glance</i>	255
Glossary and abbreviations	277
Bibliography	302
Index	321

A colour plate section is between pages 238 and 239.
