<i>Preface</i>	<i>page xi</i>
PART ONE GETTING STARTED	1
1 Data exchange by example	3
1.1 A data exchange example	3
1.2 Overview of the main tasks in data exchange	9
1.3 Data exchange vs data integration	11
2 Theoretical background	12
2.1 Relational database model	12
2.2 Query languages	14
2.3 Incomplete data	18
2.4 Complexity classes	21
2.5 Basics of automata theory	27
3 Data exchange: key definitions	29
3.1 Schema mappings	29
3.2 Solutions	30
3.3 Query answering and rewriting	31
3.4 Bibliographic comments	32
PART TWO RELATIONAL DATA EXCHANGE	33
4 The problem of relational data exchange	35
4.1 Key definitions	35
4.2 Key problems	39
5 Existence of solutions	43
5.1 The problem and easy cases	43
5.2 Undecidability for st-tgds and target constraints	44
5.3 The chase	46

viii	<i>Contents</i>	
	5.4 Weak acyclicity of target constraints	49
	5.5 Complexity of the problem	53
6	Good solutions	56
	6.1 Universal solutions	56
	6.2 Existence of universal solutions	59
	6.3 Canonical universal solution and chase	65
	6.4 The core	68
7	Query answering and rewriting	75
	7.1 Answering relational calculus queries	75
	7.2 Answering conjunctive queries	76
	7.3 Conjunctive queries with inequalities	78
	7.4 Tractable query answering with negation	81
	7.5 Rewritability over special solutions	88
	7.6 Non-rewritability tool: locality	91
8	Alternative semantics	97
	8.1 Universal solutions semantics	98
	8.2 Closed-world semantics	102
	8.3 Closed-world semantics and target constraints	112
	8.4 Clopen-world semantics	121
9	Endnotes to Part Two	124
	9.1 Summary	124
	9.2 Bibliographic comments	125
	9.3 Exercises	126
	PART THREE XML DATA EXCHANGE	133
10	The problem of XML data exchange	135
	10.1 XML documents and schemas	135
	10.2 Key problems of XML data exchange	141
11	Patterns and mappings	143
	11.1 Tree patterns: classification and complexity	143
	11.2 XML schema mappings and their complexity	153
12	Building solutions	158
	12.1 Building solutions revisited	158
	12.2 A simple exhaustive search algorithm	159
	12.3 Nested-relational DTDs	162
	12.4 The algorithm for regular schemas	168
	12.5 The general algorithm	172
	12.6 Combined complexity of solution building	178

<i>Contents</i>		ix
13	Answering tuple queries	182
	13.1 The query answering problem	182
	13.2 An upper bound	184
	13.3 Sources of intractability	185
	13.4 Tractable query answering	189
14	XML-to-XML queries	193
	14.1 XML-to-XML query language TQL	193
	14.2 Notion of certain answers	196
	14.3 Certain answers for TQL queries	201
	14.4 XML-to-XML queries in data exchange	203
15	XML data exchange via relations	206
	15.1 Translations and correctness	206
	15.2 Translations of schemas and documents	209
	15.3 Translations of patterns, mappings and queries	213
	15.4 Answering XML queries using relational data exchange	217
16	Endnotes to Part Three	220
	16.1 Summary	220
	16.2 Bibliographic comments	221
	16.3 Exercises	221
 PART FOUR METADATA MANAGEMENT		 225
17	What is metadata management?	227
	17.1 Reasoning about schema mappings	227
	17.2 Manipulating schema mappings	228
18	Consistency of schema mappings	230
	18.1 Problems statements	230
	18.2 Consistency for XML	231
	18.3 Absolute consistency for XML	238
19	Mapping composition	249
	19.1 The notion of composition and key problems	249
	19.2 Complexity of relational composition	251
	19.3 Extending st-tgds with second-order quantification	253
	19.4 Complexity of XML composition	261
	19.5 Tractable XML composition	265
20	Inverting schema mappings	272
	20.1 A first definition of inverse	272
	20.2 Bringing exchanged data back: the recovery of a schema mapping	280
	20.3 Computing the inverse operator	287
	20.4 Inverses under extended semantics	294

21	Structural characterizations of schema mapping	300
	21.1 Structural properties	300
	21.2 Schema mapping languages characterizations	301
	21.3 An application: simplifying schema mappings	307
22	Endnotes to Part Four	312
	22.1 Summary	312
	22.2 Bibliographic comments	313
	22.3 Exercises	315
	<i>References</i>	321
	<i>Index</i>	327
