I Basics of Optimization 1

1 Main Concepts 3
  1.1 Optimization Problems .................................. 3
  1.2 Convexity ............................................. 6
  1.3 Optimality Conditions .................................. 9
  1.4 Lagrange Duality Theory ................................. 10
  1.5 Complementary Slackness ................................. 13
  1.6 Karush-Kuhn-Tucker Conditions ......................... 14

2 Linear and Quadratic Optimization 19
  2.1 Polyhedra and Polytopes ................................ 19
  2.2 Linear Programming .................................... 20
  2.3 Quadratic Programming ................................ 27
  2.4 Mixed-Integer Optimization ............................. 30

3 Numerical Methods for Optimization 33
  3.1 Convergence ........................................... 33
  3.2 Unconstrained Optimization ............................. 35
  3.3 Constrained Optimization ............................... 47

4 Polyhedra and P-Collections 71
  4.1 General Set Definitions and Operations ................... 71
  4.2 Polyhedra and Representations .......................... 73

# IV Constrained Optimal Control of Linear Systems

## 10 Controllability, Reachability and Invariance

- 10.1 Controllable and Reachable Sets .................................. 183
- 10.2 Invariant Sets .......................................................... 190
- 10.3 Robust Controllable and Reachable Sets ......................... 195
- 10.4 Robust Invariant Sets .................................................. 204

## 11 Constrained Optimal Control

- 11.1 Problem Formulation ...................................................... 211
- 11.2 Feasible Solutions .......................................................... 213
- 11.3 2-Norm Case Solution ....................................................... 218
- 11.4 1-Norm and $\infty$-Norm Case Solution ......................... 229
- 11.5 State Feedback Solution, Minimum-Time Control ............ 239
- 11.6 Comparison of the Design Approaches and Controllers ...... 241

## 12 Receding Horizon Control

- 12.1 RHC Idea ................................................................. 243
- 12.2 RHC Implementation ...................................................... 244
- 12.3 RHC Main Issues .......................................................... 251
- 12.4 State Feedback Solution of RHC, 2-Norm Case ................. 257
- 12.5 State Feedback Solution of RHC, 1-Norm, $\infty$-Norm Case .... 260
- 12.6 Tuning and Practical Use ............................................... 262
- 12.7 Offset-Free Reference Tracking .................................... 266
- 12.8 Literature Review .......................................................... 274

## 13 Approximate Receding Horizon Control

- 13.1 Stability of Approximate Receding Horizon Control ............ 278
- 13.2 Barycentric Interpolation .................................................. 280
- 13.3 Partitioning and Interpolation Methods ......................... 285

## 14 On-Line Control Computation

- 14.1 Storage and On-Line Evaluation of the PWA Control Law ..... 301
- 14.2 Gradient Projection Methods Applied to MPC ................. 312
- 14.3 Interior Point Method Applied to MPC ............................... 315

## 15 Constrained Robust Optimal Control

- 15.1 Problem Formulation ...................................................... 317
- 15.2 Feasible Solutions .......................................................... 324
- 15.3 State Feedback Solution, Nominal Cost ......................... 330
- 15.4 State Feedback Solution, Worst-Case Cost, 1-Norm and $\infty$-Norm Case .................................................. 331
- 15.5 Parametrizations of the Control Policies ....................... 336
## Table of Contents

**V Constrained Optimal Control of Hybrid Systems**  
347

16 Models of Hybrid Systems  
349
- 16.1 Models of Hybrid Systems  
- 16.2 Piecewise Affine Systems  
- 16.3 Discrete Hybrid Automata  
- 16.4 Logic and Mixed-Integer Inequalities  
- 16.5 Mixed Logical Dynamical Systems  
- 16.6 Model Equivalence  
- 16.7 The HYSDEL Modeling Language  
- 16.8 Literature Review

17 Optimal Control of Hybrid Systems  
375
- 17.1 Problem Formulation  
- 17.2 Properties of the State Feedback Solution, 2-Norm Case  
- 17.3 Properties of the State Feedback Solution, 1-Norm, ∞-Norm Case  
- 17.4 Computation of the Optimal Control Input via Mixed Integer Programming  
- 17.5 State Feedback Solution via Batch Approach  
- 17.6 State Feedback Solution via Recursive Approach  
- 17.7 Discontinuous PWA Systems  
- 17.8 Receding Horizon Control
