<i>Preface</i>	<i>page</i> xiii
<i>List of symbols and acronyms</i>	xvi
1 Clouds	1
1.1 Definition and importance of clouds	1
1.2 Macroscopic cloud properties and cloud types	3
1.2.1 Low-level layered clouds	5
1.2.2 Low-level clouds with vertical extent	8
1.2.3 Mid-level clouds	10
1.2.4 High-level clouds	10
1.2.5 Other cloud types	13
1.3 Microphysical cloud properties	15
1.3.1 Cloud phase	15
1.3.2 Size distributions and water contents	17
1.4 Exercises	23
2 Thermodynamics	26
2.1 Basic definitions	26
2.1.1 Thermodynamic states and variables of state	26
2.1.2 Intensive and extensive variables	27
2.1.3 Open, closed and isolated systems	28
2.1.4 Thermodynamic equilibrium	28
2.1.5 Reversible and irreversible processes	29
2.2 Dry air	31
2.2.1 Ideal gas law	32
2.2.2 First law of thermodynamics	32
2.2.3 Special processes	35
2.2.4 The Carnot process	36
2.2.5 Air parcels	38
2.2.6 Specific entropy	39
2.3 Thermodynamic charts	40
2.4 Thermodynamics of phase transitions	41
2.4.1 The role of the Gibbs free energy in phase transitions	42
2.4.2 Phase transitions in thermodynamic equilibrium: the Clausius–Clapeyron equation	45
2.4.3 Saturation vapor pressure below 273.15 K	48

2.5	Moist air	52
2.5.1	Water in the atmosphere	52
2.5.2	Partial pressure	52
2.5.3	Water vapor mixing ratio and specific humidity	53
2.5.4	Virtual temperature	53
2.5.5	Relative humidity	54
2.5.6	Dew point temperature	55
2.5.7	Wet-bulb temperature, wet-bulb potential temperature and lifting condensation level	57
2.5.8	Isentropic condensation temperature	59
2.5.9	Equivalent potential temperature and equivalent temperature	60
2.5.10	Saturation equivalent potential temperature and saturation equivalent temperature	61
2.5.11	Wet adiabatic processes	62
2.6	Exercises	63
3	Atmospheric dynamics	68
3.1	Basic equations and buoyancy force	68
3.1.1	Navier–Stokes equation	68
3.1.2	Coriolis and centrifugal force	69
3.1.3	Hydrostatic equation	70
3.1.4	Hypsometric equation	70
3.1.5	Buoyancy force	71
3.2	Stability in dry air	72
3.2.1	Dry adiabatic lapse rate	72
3.2.2	Lapse rate and stability	73
3.2.3	Brunt–Väisälä frequency	74
3.3	Stability in condensing air	76
3.4	Instability of layers	79
3.5	Horizontal restoring forces	81
3.5.1	Geostrophic wind	81
3.5.2	Thermal wind	84
3.5.3	Inertial instability	85
3.6	Slantwise displacement	88
3.7	Exercises	90
4	Mixing and convection	95
4.1	Mixing	95
4.1.1	Isobaric mixing	95
4.1.2	Adiabatic mixing	98
4.2	Convection	99
4.2.1	Level of free convection	99
4.2.2	Convective condensation level	99
4.2.3	Elementary parcel theory	103

4.2.4	Modification of the elementary parcel theory	105
4.3	Exercises	112
5	Atmospheric aerosol particles	115
5.1	Chemical and physical characteristics of aerosol particles	115
5.1.1	Chemical characteristics	115
5.1.2	Physical characteristics	116
5.2	Aerosol size distributions	118
5.2.1	Discrete size distributions	118
5.2.2	Size distribution function	118
5.2.3	Logarithmic normal distributions	121
5.2.4	Surface and volume distributions	123
5.2.5	Observed aerosol size distributions	126
5.3	Aerosol sources	129
5.3.1	Formation mechanisms of aerosol particles	129
5.3.2	Aerosol emissions	131
5.4	Aerosol sinks	135
5.4.1	Dry scavenging	135
5.4.2	Wet scavenging	137
5.4.3	Atmospheric processing of aerosol particles	143
5.5	Burden and lifetime of aerosols	144
5.6	Summary of aerosol processes	147
5.7	Exercises	148
6	Cloud droplet formation and Köhler theory	155
6.1	Nucleation	155
6.1.1	Initiation of phase transitions	156
6.1.2	Cluster formation	158
6.2	Kelvin equation	160
6.3	Hygroscopic growth	163
6.4	Raoult's law	166
6.5	Köhler curve	170
6.5.1	Stable and unstable equilibrium	172
6.5.2	The role of particle size and chemistry for Köhler activation	176
6.6	Measurements of cloud condensation nuclei	177
6.7	Summary of cloud droplet formation by Köhler activation	180
6.8	Exercises	182
7	Microphysical processes in warm clouds	186
7.1	Droplet growth by diffusion and condensation	186
7.1.1	Diffusion equation for water vapor	188
7.1.2	Heat conduction equation	189
7.1.3	Droplet growth equation	190

7.1.4	Solution of the droplet growth equation	193
7.1.5	Growth of a droplet population	193
7.1.6	Application of the droplet growth equation	195
7.2	Droplet growth by collision–coalescence	198
7.2.1	Initiation of the collision–coalescence process	198
7.2.2	Collision and coalescence efficiencies	200
7.2.3	Terminal velocity of cloud droplets and raindrops	202
7.2.4	Growth model for continuous collection	204
7.2.5	Growth model for stochastic collection	207
7.3	Evaporation and break-up of raindrops	208
7.3.1	Evaporation of cloud droplets and raindrops	208
7.3.2	Maximum raindrop size	209
7.3.3	Energy transformation during collision–coalescence	210
7.3.4	Types of raindrop break-up	212
7.4	Exercises	213
8	Microphysical processes in cold clouds	218
8.1	Ice nucleation	218
8.1.1	Homogeneous ice nucleation	219
8.1.2	Heterogeneous ice nucleation	226
8.1.3	Ice nucleating particles	230
8.1.4	Dependence of ice nucleation on temperature and supersaturation	232
8.2	Ice crystal habits	236
8.3	Ice crystal growth	237
8.3.1	Growth by diffusion	239
8.3.2	Snow formation by aggregation	241
8.3.3	Growth by accretion and terminal velocity of snowflakes	241
8.4	Collapse of ice particles	245
8.4.1	Ice multiplication	245
8.4.2	Melting and sublimation of ice and snow	246
8.5	Summary of microphysical processes in warm and cold clouds	246
8.6	Exercises	248
9	Precipitation	251
9.1	Precipitation rates	251
9.2	Size distributions of hydrometeors	252
9.2.1	Raindrop size distribution	252
9.2.2	Snowflake size distribution	255
9.3	Radar	256
9.3.1	Scattering regimes	257
9.3.2	Radar reflectivity	258
9.3.3	Relation of radar reflectivity to precipitation rate	260
9.3.4	Radar images	261

9.4	Types of precipitation	261
9.4.1	Stratiform precipitation	263
9.4.2	Convective precipitation	267
9.5	Synoptic and mesoscale structure of precipitation	269
9.5.1	Norwegian cyclone model	270
9.5.2	Conveyor belt approach	271
9.5.3	Orographic precipitation	274
9.6	Precipitation in the present and future climate	275
9.7	Exercises	279
10	Storms and cloud dynamics	285
10.1	Isolated thunderstorms and hail	285
10.1.1	Life cycle of an ordinary thunderstorm	286
10.1.2	Hail	288
10.2	Lightning and thunder	290
10.2.1	Global electrical circuit	290
10.2.2	Charge separation within clouds	291
10.2.3	Ground flashes	293
10.3	Multicell and supercell storms	295
10.3.1	Multicell storms	297
10.3.2	Vorticity	298
10.3.3	Supercell storms	301
10.3.4	Tornadoes	304
10.4	Mesoscale convective systems	307
10.5	Tropical cyclones	310
10.5.1	General characteristics	310
10.5.2	Prerequisites for tropical cyclone formation	312
10.5.3	Circulation within a tropical cyclone	313
10.5.4	Differences between tropical and extratropical cyclones	313
10.5.5	Tropical cyclone as a heat engine	314
10.5.6	Decay of tropical cyclones	317
10.6	Cyclones and climate change	317
10.7	Exercises	318
11	Global energy budget	323
11.1	Energy balance at the top of the atmosphere	323
11.2	Energy balance in the atmosphere	326
11.3	Energy balance at the surface	328
11.4	Cloud radiative effects	329
11.5	Exercises	333
12	Impact of aerosol particles and clouds on climate	335
12.1	Aerosol radiative forcing	335
12.1.1	Radiative forcing due to aerosol–radiation interactions	337

Cambridge University Press

978-1-107-01822-8 - An Introduction to Clouds: From the Microscale to Climate

Ulrike Lohmann, Felix Lüönd and Fabian Mahrt

Table of Contents

[More information](#)

12.1.2	Radiative forcing due to aerosol–cloud interactions	340
12.1.3	Comparison of anthropogenic forcings	343
12.2	Clouds and climate	345
12.2.1	Clouds at different altitude levels	345
12.2.2	Cloud regimes	347
12.2.3	Trends in cloud cover	349
12.3	Climate feedbacks	350
12.3.1	Planck feedback	351
12.3.2	Water vapor, lapse rate and ice-albedo feedback	352
12.3.3	Cloud feedback	353
12.4	Climate engineering involving aerosol particles and clouds	356
12.4.1	Stratospheric aerosol injections	358
12.4.2	Marine cloud brightening	360
12.4.3	Cirrus modification	361
12.4.4	Summary of the climate engineering discussion	363
12.5	Exercises	363
