### 1 Introduction

1. Some basic features of signalling nouns  
2. A discourse perspective on signalling nouns  
3. Exophoric abstract nouns and signalling nouns  
4. The place of signalling nouns in research on the vocabulary of English  
5. Which words and phrases are core members of the class, and which are peripheral?  
6. How big is the category, and is it a bounded or unbounded class?  

### 2 Grammatical features of signalling nouns

2.1 Grammatical features of signalling nouns  
2.2 Noun phrase structure: *this*/*these* + SN and other forms of signalling noun premodification  
2.3 Noun phrase: SN + complement clause  
2.4 Clause structure: SN + *be* + nominalisation  
2.5 Grammatical patterns not covered in the literature  
\[ 2.5.1 \] Marked patterns  
\[ 2.5.2 \] Signalling nouns and specifics in apposition  
\[ 2.5.3 \] Comparative specifics  
\[ 2.5.4 \] Signalling nouns in adjunct groups  
2.6 General problems with over-reliance on structural tests of signalling noun status  

### 3 Semantic features

3.1 Superordinates, abstract nouns, and constant and variable meaning  
3.2 Complexity of the signalling noun realisation
viii

Contents

3.3 Semantic classification of signalling nouns 28
   3.3.1 Semantic categories 29

4 Discourse features 34
   4.1 Signalling nouns and Winter’s clause relations and metalanguage nouns 34
   4.2 Logico-semantic relations 36
   4.3 Signalling nouns and logico-semantic relations 43
   4.4 Conclusion 45

5 Criteria for determining what constitutes a signalling noun in this study 46
   5.1 General considerations 46
   5.2 A broad criterion for signalling noun membership 48
   5.3 Signalling nouns and repetition 50
   5.4 More specific criteria 55
      5.4.1 Bivalent signalling nouns 55
      5.4.2 Logogenesis 56
      5.4.3 Pre- and post- modifiers 57
   5.5 Prefabricated patterns 59
   5.6 Text nouns 61
   5.7 Partitives 61
   5.8 Relational process verbs 64
   5.9 Relative clauses 65

6 Corpus, methodology, annotation system, and reporting of the data 68
   6.1 Corpus description 68
   6.2 Compilation 69
   6.3 Methodology 70
   6.4 Annotation system 73
   6.5 Reporting of data 74

7 Set of examples 76
   ANAcp – anaphoric, across-clause, proximal (6,090 per million words) 76
   CNAcp – cataphoric, across-clause, proximal (5,363 per million words) 76
   ANAcD – anaphoric, across-clause, distal (2,848 per million words) 77
   CNAcD – cataphoric, across-clause, distal (1,961 per million words) 77
   CNAfd – SN + of + deverbal/deadjectival noun (1,441 per million words) 78
   CNto – SN + to + infinitival specifics (1,412 per million words) 78
   CNth – SN + that content clause specifics (1,100 per million words) 78
   CNvth SN + relational process verb + infinitival specifics (826 per million words) 78
Overview of signalling noun distributions in the corpus

8.1 Broad overview
8.2 More detailed examination of most frequent signalling nouns in the corpus
8.3 Signalling nouns by discipline
8.4 Characteristic signalling nouns of the natural and social sciences
8.5 Signalling nouns and academic genres
Appendix 8.1 Expanded tables

9 Overview of semantic categories
9.1 Introduction and basic frequencies
Contents

9.2 Question 1: What is the relative frequency of the semantic categories across the corpus? 115
9.3 Question 2: Is the relative frequency of the semantic categories consistent across the major divisions of the natural and social sciences disciplines? 119
9.4 Question 3: Is the relative frequency of the semantic categories consistent across the specific disciplines within the broad domains of the natural and social sciences? 120
9.5 Question 4: What is the relative frequency of the semantic categories according to genre? 129
9.6 Question 5: Does the relative frequency across genres apply also to the major division between the natural and social sciences? 134
9.7 Question 6: Does the relative frequency across genres apply also across the specific disciplines within these broad domains? 142
9.8 Chapter summary and conclusion 159

10 Overview of lexicogrammatical and discourse pattern frequencies 160
10.1 Introduction 160
10.2 Overview of the signalling noun patterns in the corpus, including their overall frequencies 162
10.3 Signalling noun patterns and academic disciplines 167
10.4 Signalling noun patterns and academic genres

Appendix 10.1 177

11 Conclusion 181
11.1 Summary 181
11.2 Limitations of the study 186
11.3 Future research 187
11.4 Application to pedagogy 188

Appendix A The overall structure of the corpus 192
Appendix B List of files that make up the corpus 193
Appendix C Lemmatised SNs in descending order according to normalised frequency 203
Appendix D Non-lemmatised SNs in descending order according to normalised frequency 222
Appendix E Lemmatised SNs in alphabetical order 241
Appendix F Non-lemmatised SNs in alphabetical order 260
Appendix G Frequency of SNs in different semantic categories 279
