Prologue xiii
A note on scientific units xvii
Acknowledgements xix

Part I Views of Venus, from the beginning to the present day

1 The dawn of Venus exploration 3
   The Evening Star and the Morning Star 3
   Transits: Venus crosses the disc of the Sun, but rarely 6
   Early observations: another planet with an atmosphere 8
   Observations of surface features 9
   The ashen light 10
   The ultraviolet markings 12
   Speculation on the nature of the clouds and conditions at the surface 13
   The search for water vapour in the atmosphere 14
   A hot and arid surface? 15

2 Mariner and Venera: the first space missions to Venus 17
   The Venus Mariners: the first close-up views 17
   Venera: the first landings 24
   Venera atmospheric measurements 29
   The first Venus orbiters 29

3 Pioneer Venus and Vega: orbiters, balloons and multiprobes 32
   NASA plans multiple-entry probes and an orbiter 33
   Pioneer Venus 33
   Vega: the first balloon mission 40
   A picture of the planet emerges 41

4 Images of the surface 48
   The first glimpses of the surface using radar from Earth 48
   Pioneer and Venera: early radar maps from orbit 51
   Magellan: high-resolution radar images of the surface 54
Contents

5 The forgotten world 64
The ‘evil twin’ syndrome 64
Unfulfilled objectives 67
Technical studies 68
Phantom missions 69
Broken dreams 74

6 Earth-based astronomy delivers a breakthrough 75
New windows on Venus 77
The leaking ‘greenhouse’ 78
Mapping the deep cloud structure and dynamics 79
Composition measurements in the deep atmosphere 81

7 Can’t stop now: Galileo and Cassini fly past Venus 87
Deep cloud structure 88
Ashen light revisited 89
Atmospheric composition 90
Atmospheric dynamics and meteorology 93
Temperature maps of the surface 94
Observation of Venus by Cassini/VIMS 95

8 Europe and Japan join in: Venus Express and Akatsuki 97
The Venus Express mission proposal 97
The scientific payload 99
The flight to Venus 103
Venus Express achievements 105
Venus Express lives on 113
Japan’s climate orbiter, Akatsuki 113

Part II The motivation to continue the quest

9 Origin and evolution: the solid planet 119
Twin planets? 119
What is Venus made from? 119
Composition of the surface rock 121
Messengers from the interior: the noble gases 122
Why no magnetic field? 125
Venus’s surface features: Earthlike but different 125
On the surface: mountains, continents and river valleys 127
Tectonic features 133
Impact craters 135
Lava plains 138
Metallic snowcaps 139
## Contents

10 Atmosphere and ocean

<table>
<thead>
<tr>

Contents

14 The climate on Venus, past, present and future 215
   Early Venus 216
   Volcanic Venus 217
   Present Venus 217
   Future Venus 218
   Climate change models 220
   Model forecasts and hindcasts 221
   Summing up 223

15 Could there be life on Venus? 225
   Possible habitats on Venus 225
   Evolution and adaptation 226
   Terrestrial vs. Martian vs. Venussian life 227
   Possible evidence for life 227
   Astrobiological experiments: next steps 229
   The prospects for finding life on Venus 232

Part III Plans and visions for the future

16 Solar system exploration: what next for Venus? 237
   Choosing the way forward 237
   Venus in NASA’s Discovery Programme 242
   Priorities and road maps: NASA leaves Venus on the back burner 242
   The Russian revival 244
   European plans 246

17 Coming soon to a planet near you: planned Venus missions 249
   The next NASA mission to Venus 249
   European Venus mission studies 252
   Venera-D 255
   International cooperation 257

18 Towards the horizon: advanced technology 259
   Larger, cheaper payloads: aerobraking and aerocapture 259
   Surveying the surface: mappers, aeroplanes and submarines 260
   Direct sampling of the surface 262
   Instruments 263
   Rovers and drilling 263
   Sample return: bringing material back to Earth 265

19 Beyond the horizon: human expeditions 270
   When, if ever 270
   NASA’s 1967 manned flyby 271
   Floating research stations 273
   Terraforming Venus: building an Earthlike climate 274
