SELF-REGULATION AND AUTONOMY

Self-regulation and autonomy have emerged as key predictors of health and well-being in several areas of psychology. This timely volume brings together eminent scholars at the forefront of this research, which is taking place in disciplines including social psychology, developmental psychology, educational psychology, and developmental neuroscience. The contributors present ideas and research findings on the development of self-regulation and autonomy, including their biological bases, antecedents, and consequences. Editors Bryan W. Sokol, Frederick M. E. Grouzet, and Ulrich Müller have shaped the volume’s multi-disciplinary perspective on self-regulation and autonomy to reflect the legacy of Jean Piaget, the trailblazing developmental psychologist whose work drew on a diverse body of research.

Bryan W. Sokol is an associate professor in the department of psychology and the director of the Center for Service and Community Engagement at Saint Louis University. His research interests include the development of children’s social understanding and socioemotional competence, moral agency, and conceptions of selfhood.

Frederick M. E. Grouzet is an associate professor of psychology at the University of Victoria. His research interests include the development of personal goals and values through socialization and personal-growth experiences and activities, as well as the relationships between goals, mental time travel, and well-being.

Ulrich Müller is an associate professor of psychology at the University of Victoria. His research focuses on the development of self-regulation in young children and the ways in which social interaction influences the development of self-regulation. Dr. Müller has co-edited several books, including The Cambridge Companion to Piaget (2009).

Series Editor’s Preface to the Book Series  xi
Preface to the Volume  xv

1. Self-Regulation and Autonomy: An Introduction  1
   Frederick M. E. Grouzet, Bryan W. Sokol, and Ulrich Müller

PART I DIALECTIC BETWEEN ORGANISMIC
AND SOCIAL PROCESSES

2. The Importance of Autonomy for Development and Well-Being  19
   Edward L. Deci and Richard M. Ryan

3. Self-Regulation and Autonomy: The Dialectic Between Organismic and Sociocognitive Valuing Processes  47
   Frederick M. E. Grouzet

4. Development as Emergence  78
   R. Keith Sawyer

PART II SOCIAL DEVELOPMENT

5. Constructing the Agent: Developing Conceptions of Autonomy and Selfhood  101
   Bryan W. Sokol, Ulrich Müller, and Michael J. Chandler

6. Revisiting the Moral Self-Construct: Developmental Perspectives on Moral Selfhood  115
   Tobias Krettenauer
## Contents

7. Facilitating Autonomy in the Family: Supporting Intrinsic Motivation and Self-Regulation  
   Wendy S. Grohnick and Jacquelyn N. Raftery-Helmer  
   141

8. "It's a Part of Life to Do What You Want": The Role of Personal Choice in Social Development  
   Larry Nucci  
   165

### PART III  SELF-REGULATION AND AUTONOMY AT SCHOOL

   Richard M. Ryan and Edward L. Deci  
   191

10. Self-Regulation and School Success  
    Angela Lee Duckworth and Stephanie M. Carlson  
    208

11. Understanding Explanatory Talk Through Vygotsky’s Theory of Self-Regulation  
    Challis J. E. Kinnucan and Janet E. Kuebli  
    231

### PART IV  NEUROLOGICAL PERSPECTIVE

12. Two-Mode Models of Self-Regulation and Serotonergic Functioning: Divergent Manifestations of Impulse and Constraint  
    Charles S. Carver, Sheri L. Johnson, and Jutta Joormann  
    255

13. Self-Regulation of Neural Development  
    Allison C. Waters and Don M. Tucker  
    279

13.1. Properties of Dorsal and Ventral Limbic-Cortical Divisions
In 1970, Jean Piaget participated in a workshop that instigated vigorous discussion in higher education circles about the importance of traversing the boundaries across the disciplines. The workshop, entitled “L’interdisciplinarité – Problèmes d’enseignement et de recherche dans les universités,” was held in Nice, France, in September 1970 and the proceedings were published in 1972 as a monograph entitled *Interdisciplinarity: Problems of Teaching and Research in Universities* (Paris: Organisation for Economic Cooperation and Development). This workshop and the book that resulted from it set the stage for ongoing debates about how best to view work occurring at the intersection of disciplinary boundaries. Piaget’s remarks made clear that new conceptual frameworks were needed, frameworks that underscored the importance of augmenting disciplinary knowledge in order to address enduring challenges of our times. Whether to do so from multi-, trans-, or interdisciplinary bases and what precisely each of these constructs adds to disciplinary discussions has been hotly debated for the ensuing four decades. What Piaget was wrestling with in 1970 and many others have been pursuing since then are two enduring issues: the complexity of knowledge and the importance of viewing knowledge construction as a process embedded in real time. Piaget understood early what has become more obvious now, namely the importance of going beyond disciplinary limitations both theoretically and methodologically. This insight has shaped modern thinking on knowledge and development in significant ways.

Around the same time that Piaget spoke at the Organisation for Economic Cooperation and Development workshop, a new society was formed: the Jean Piaget Society. Founded in 1970, it has since provided an internationally recognized forum for inquiry and advances about significant problems in the developmental sciences. The Society has had a long-standing commitment to developmental perspectives and has been deeply
concerned with theories and conceptualizations of development and the ways developmental perspectives connect to and influence research. Since renamed the Jean Piaget Society for Knowledge and Development, the Society organizes and sponsors a book series, an annual meeting for plenary addresses and scholarly presentations, a scholarly journal (Cognitive Development), and a website (http://www.piaget.org). Across venues, participating scholars come from a range of disciplines, including departments of psychology, anthropology, linguistics, sociology, biology, philosophy, and education.

The Society has had a long-standing dedication to the publication of a book series that addresses core problems in the developmental sciences. For more than 30 years, Lawrence Erlbaum Press (currently Psychology Press/Taylor and Francis) published the series. Each of the volumes in the Jean Piaget Series (JPS) engages well-recognized scholars on a set of themes that bring together divergent disciplinary perspectives. The series, which has included nearly 40 published volumes, has dealt with topics such as human understanding, developmental psychopathology, concept formation, and relations between learning and development.

In a time when there is a proliferation of edited volumes, one can ask what makes this series thrive. The high regard for these volumes has been due to the careful way interdisciplinary thinking has shed light on enduring issues with which scholars interested in human development are grappling. To a large measure the rigorous system of cultivation and review plays a significant role in arriving at cutting-edge thinking that goes beyond juxtaposition of new ideas. Careful attention is given to taking a theme at the center of developmental science (e.g., epigenesis of mind; culture, thought, and development; social development and social justice; developmental social cognitive neuroscience) and weaving scholarship from neighboring disciplines into discussions in ways that hold the potential to significantly shape ongoing scientific discourse.

Each JPS volume emanates from the Society’s themed annual meeting that includes plenary addresses and invited symposia, a meeting structure that itself is the outcome of a long and rigorous academic review process. Typically, several revisions are made in the proposal before it obtains approval from the full board of directors. The annual meeting organizers also serve as editors of the volume. To supplement chapters by the five or six plenary speakers, the volume editors typically invite other contributors to the volume. The editors also inform contributors about the requirements with regard to the volume’s theme and scope. Finally, the editors engage in a thorough evaluation of each contribution, providing extensive feedback.
and soliciting revisions until they are of the required quality. This process ensures that extraordinary scholars will contribute to the volumes. In summary, we believe the book series has provided a distinctive intellectual contribution to the study of knowledge and development by focusing on developmental inquiry from an interdisciplinary perspective. Further information about the series can be found at http://www.piaget.org/Series/series.html.

This second volume in our book series Interdisciplinary Perspectives on Knowledge and Development: The Jean Piaget Symposium Series with Cambridge University Press exemplifies the strong interdisciplinary approach that has been central to all of our prior volumes. Edited by Bryan W. Sokol, Frederick M. E. Grouzet, and Ulrich Müller, this volume, Self-Regulation and Autonomy: Social and Developmental Dimensions of Human Conduct, continues the Jean Piaget Society’s tradition of providing a recognized forum for advancing inquiry about both enduring and emergent problems in the developmental sciences. The linkage between self-regulation and autonomy is truly novel, and the volume provides a space to explore the interface between these two constructs from various areas of psychology. In addition to providing new conceptual frameworks that deal with the dialectic between organism and social context, the volume provides insights into usable knowledge to the extent that theory and research about self-regulation and autonomy are applied to educational settings. As such, this second volume continues to represent the goals of the series in important ways by paving the road to further interdisciplinary scholarship at the frontiers of new knowledge about human development.

Preface to the Volume

The origin of this volume was a conference entitled “Self-Regulation and Autonomy: Exploring Social, Developmental and Educational Currents of Human Conduct” that we organized in 2010. The impetus for organizing a conference on self-regulation and autonomy grew from three broad considerations. The first concerned the increasing interest in these topics from researchers of diverse backgrounds. From almost any theoretical angle, self-regulation and autonomy are considered vital for adaptive psychological functioning in human beings. The second consideration followed from the important role of self-regulation in typical and atypical development, particularly in social contexts like school or family life. Successes and failures in self-regulation are reflected in children’s and adults’ abilities to regulate impulses, attention, and emotions, all of which have important ramifications for individual functioning and interpersonal behavior. Finally, the third consideration derived from several key conceptual questions about the notions of self-regulation and autonomy – specifically, how should the impact of social interactions on self-regulation and autonomy be conceptualized? Should self-regulation and autonomy be conceptualized as organismic or socially acquired constructs? Are they culturally universal or specific? What are their biological bases?

We submitted a meeting proposal describing these themes to the board of directors of the Jean Piaget Society. Based on their helpful feedback, we refined the proposal and sharpened its conceptual focus. Our proposal was realized at the 40th Annual Meeting of the Jean Piaget Society, which was held June 3 to 5, 2010, in St. Louis, Missouri. This volume is based on presentations from that meeting.

We would like to thank several individuals who were helpful in bringing this project to fruition. Geoffrey Saxe (past president of the Society) was very supportive of our efforts to make both the conference and this
Preface to the Volume

volume a success. Larry Nucci (VP Meeting Planning), Stephanie Carlson (VP Publicity and Outreach), Christopher Lalonde (VP Information Technology), Ashley Maynard (Treasurer), and Saba Ayman-Noelley (VP Communications) put in a lot of hard work in planning, organizing, and advertising the meeting. The local arrangement committee in St. Louis, headed by Bryan W. Sokol and the graduate students at Saint Louis University’s Department of Psychology, made sure that the meeting itself ran smoothly. We would also like to thank Nancy Budwig for her advice and counsel in preparing this volume.

We would like to acknowledge the generous financial support we received from the Jacobs Foundation, Saint Louis University, the Center for Character and Citizenship (University of Missouri at St. Louis), the St. Louis Academy of Science, Elsevier, and Taylor and Francis.
