<i>Preface</i>	<i>page viii</i>
<b>1 Introduction</b>	<b>1</b>
<b>2 Fundamentals of rock failure physics</b>	<b>6</b>
2.1 Mechanical properties and constitutive relations	6
2.1.1 Elastic deformation	6
2.1.2 Ductile deformation	7
2.1.3 Fracture	9
2.1.4 Friction	11
2.2 Basics of rock fracture mechanics	15
2.2.1 Energy release rate and resistance to rupture growth	15
2.2.2 Stress concentration and cohesive zone model	17
2.2.3 Breakdown zone model for shear failure	20
2.2.4 $J$ -integral and energy criterion for shear failure	22
2.2.5 Relation between resistance to rupture growth and constitutive relation parameters	26
<b>3 Laboratory-derived constitutive relations for shear failure</b>	<b>28</b>
3.1 Shear failure of intact rock	28
3.1.1 Method and apparatus used	28
3.1.2 Constitutive relations derived from data on the shear failure of intact rock	32
3.1.3 Geometric irregularity of shear-fractured surfaces and characteristic length	36
3.2 Frictional slip failure on precut rock interface	39
3.2.1 Method and apparatus used	39
3.2.2 Geometric irregularity of precut fault surfaces and characteristic length	44
3.2.3 Constitutive relations derived from data on frictional stick-slip failure	45
3.2.4 Laboratory-derived relationships between physical quantities observed during dynamic slip rupture propagation	50
3.3 Unifying constitutive formulation and a constitutive scaling law	55
3.3.1 Unification of constitutive relations for shear fracture and for frictional slip failure	55

3.3.2	A constitutive scaling law	61
3.3.3	Critical energy required for shear fracture and for frictional stick-slip failure	63
3.3.4	Stability/instability of the breakdown process	67
3.3.5	Breakdown zone size	69
3.4	Dependence of constitutive law parameters on environmental factors	70
3.4.1	Introduction	70
3.4.2	Dependence of shear failure strength on environmental factors	72
3.4.3	Dependence of breakdown stress drop on environmental factors	82
3.4.4	Dependence of breakdown displacement on environmental factors	88
<b>4</b>	<b>Constitutive laws for earthquake ruptures</b>	<b>91</b>
4.1	Basic foundations for constitutive formulations	91
4.2	Rate-dependent constitutive formulations	93
4.3	Slip-dependent constitutive formulations	99
4.4	Depth dependence of constitutive law parameters	106
<b>5</b>	<b>Earthquake generation processes</b>	<b>121</b>
5.1	Shear failure nucleation processes observed in the laboratory	121
5.1.1	Introduction	121
5.1.2	Experimental method	122
5.1.3	Nucleation phases observed on faults with different surface roughnesses	124
5.1.4	Scaling of the nucleation zone size	139
5.2	Earthquake rupture nucleation	143
5.2.1	Seismogenic background	143
5.2.2	Physical modeling and theoretical derivation of the nucleation zone size	145
5.2.3	Comparison of theoretical relations with seismological data	152
5.2.4	Foreshock activity associated with the nucleation process	157
5.3	Dynamic propagation and generation of strong motion seismic waves	160
5.3.1	Slip velocity and slip acceleration in the breakdown zone	160
5.3.2	The cutoff frequency $f_{\max}^s$ of the power spectral density of slip acceleration at the source	167
5.3.3	Environmental factors for the generation of high-frequency strong motion at the source	174
<b>6</b>	<b>Physical scale-dependence</b>	<b>179</b>
6.1	Introduction	179
6.2	Scaling property incorporated into the slip-dependent constitutive law	180
6.3	Root cause of scale-dependence	182
6.4	Physical scaling of scale-dependent physical quantities	187
6.4.1	Scaling relationships between $X_c$ and $D_c$ , and between $L_c$ and $D_c$	187
6.4.2	Physical scaling of the duration time of shear rupture nucleation	189

---

6.4.3 Scale-dependence of apparent shear rupture energy	195
6.5 Fault heterogeneity and the Gutenberg–Richter frequency–magnitude relation	197
<b>7 Large earthquake generation cycles and accompanying seismic activity</b>	<b>200</b>
7.1 The cyclical process of typical large earthquakes on a fault	200
7.2 The process leading up to a large earthquake and seismic activity	209
7.2.1 Seismic activity at later stages of the recurrence interval	209
7.2.2 Seismic activity immediately before a mainshock earthquake	223
7.3 Predictability of large earthquakes	232
7.3.1 Introduction	232
7.3.2 Long-term forecasting	234
7.3.3 Intermediate-term forecasting	236
7.3.4 Short-term forecasting	242
<i>List of illustration credits</i>	248
<i>References</i>	251
<i>Index</i>	267
