Pragmatic Markers in British English

Fundamental to oral fluency, pragmatic markers facilitate the flow of spontaneous, interactional and social conversation. Various terms such as ‘hedges’, ‘fumbles’ and ‘conversational greasers’ in earlier academic studies, this book explores the meaning, function and role of *well*, *I mean*, *just*, *sort of*, *like* and *you know* in British English. Adopting a sociolinguistic and historical perspective, Beeching investigates how these six commonly occurring pragmatic markers are used and the ways in which their current meanings and functions have evolved. Informed by empirical data from a wide range of contemporary and historical sources, including a small corpus of spoken English collected in 2011–14, the British National Corpus and the Old Bailey Corpus, *Pragmatic Markers in British English* contributes to debates about language variation and change, incrementation in adolescence and grammaticalisation and pragmaticalisation. The volume makes fascinating reading for researchers and students in linguistics and English, as well as non-specialists intrigued by this speech phenomenon.

KATE BEECHING is Associate Professor in Applied Linguistics at UWE, Bristol, and Director of the Bristol Centre for Linguistics.

Acknowledgements

This volume arose, firstly, out of my interest in the role of pragmatic markers in the negotiation of meaning in social interaction in contemporary spoken English and French and, secondly, out of a curiosity as to how the markers developed new meanings and functions as they developed historically. I owe a great debt of gratitude to colleagues with similar interests who have supported me and inspired me to pursue different lines of inquiry.

On the historical side, I would like to thank colleagues who contributed to a special panel on ‘Meaning in Diachrony’ at the iMean conference, University of the West of England, Bristol, in 2009 and whose papers and discussions have contributed enormously to my understanding of semantic change: Liesbeth Degand, Ulrich Detges, Richard Ingham, Pierre Larrivée, Corinne Rossari, Elizabeth Traugott, Jacqueline Visconti and Richard Waltereit. I would also like to acknowledge my indebtedness to Maj-Britt Mosegaard Hansen, whose intellectual acumen has been an inspiration to me.

My thanks go to my faculty for granting me research leave in early 2011, which permitted me to write the proposal for the volume, and to Sonia Branca and the Université de Paris-3 for welcoming me as a research scholar in February and March of that year.

More recently, discussions with colleagues in the DiPVaC (Discourse-Pragmatic Variation and Change) group, led by Heike Pichler, and which held its first meeting in Salford, Manchester, in 2012, have been instrumental in shaping not only my own thinking but the way that this exciting and burgeoning new field is developing. Special thanks go not only to Heike Pichler but also to Gisle Andersen, Jenny Cheshire, Alexandra D’Arcy, Stephen Levey, Sali Tagliamonte and Cathleen Walters.

Particular thanks go to Karin Aijmer, Laurel Brinton, Alexandra D’Arcy and Andreas Jucker for their comments on the first drafts of particular chapters and to anonymous reviewers for their overview of the book as a whole. The volume has been considerably improved on the basis of those comments. Remaining shortcomings are of course my own responsibility.

I would like to thank Qun Zheng, my PhD student, who successfully completed her thesis in 2012, for her enthusiasm and diligence and for collecting the

2011 corpus of UWE Role-plays. I would also like to express my gratitude to the undergraduate students at UWE who agreed to have their voices recorded and to fill in attitudinal questionnaires, and to my Book Group and Bath Cantata Group, who also agreed to fill in questionnaires on their attitudes to the markers. Without them, the book would not have been possible.

Finally, many thanks to all my colleagues in the Bristol Centre for Linguistics for insightful comments on oral presentations of ongoing work and to friends and family who have supported me and kept me supplied with regular meals and cups of coffee throughout the writing of this volume.

Abbreviations

AB	BNC social class category: refers to top or middle management, administrative or professional classes
BNC	British National Corpus
C1	BNC social class category: refers to junior management, supervisory or clerical workers
C2	BNC social class category: refers to skilled manual workers
COCA	Corpus of Contemporary American English
COLT	Corpus of London Teenage Language
DE	BNC social class category: refers to semi-skilled or unskilled workers
EModE	Early Modern English
FTA	Face-Threatening Act (Brown and Levinson [1978] 1987)

ICE-GB	The British component of the International Corpus of English
IITSC	Invited Inferencing Theory of Semantic Change (Traugott and Dasher 2002)
LLC	London-Lund Corpus
M1	Meaning 1
M2	Meaning 2
ME	Middle English
OBC	Old Bailey Corpus
OE	Old English
OED	Oxford English Dictionary
PCI	Particularised Conversational Implicature
PEF	Average score for 'Polite', 'Educated' and 'Friendly' on the attitudinal questionnaires

Transcription conventions

Transcription conventions in the UWE Role-play data (adapted from Coates (ed.) 1998; Cameron 2001)

/	a slash indicates the end of a tone group or chunk of talk in the middle of a turn.
[...]	square brackets are used to indicate overlapping speech (where speakers talk simultaneously).
=	an equals sign is used to indicate latching (where there is no gap or pause between speakers' turns and one speaker's utterance 'latches' directly onto the previous speaker's utterance).
(.)	a full-stop in round brackets indicates a short pause.
fantASTic	capital letters refer to words/syllables uttered with emphasis.
summer?	a question mark indicates the end of a chunk of talk which is being analysed as a question.
XXX	is used to anonymise any names used in the text.
((I mean))	double round brackets indicate that there is doubt about the accuracy of the transcription.
((xxxxx))	double round brackets enclosing several 'x's indicate untranscribable material.
<gonna>	single angled brackets after the word show that it is pronounced in a particular way, for example, 'going to <goin' to>' or 'going to <gonna>'; 'birthday <birfday>' 'kind of <kinda>'.
<<laughter>>	double angled brackets are used to give extralinguistic material such as laughter, groaning or yawning.
