

## Contents

<i>Preface</i>	<i>page</i> xiii
<i>Acknowledgments</i>	xvii
1 Tools of the trade	1
1.1 Probability: The calculus of uncertainty	1
1.2 Rules of engagement	3
1.3 Probability density function and moments	5
1.4 The binomial distribution: “bits” [ $Bin(1, p)$ ] and “pieces” [ $Bin(n, p)$ ]	7
1.5 The Poisson distribution: counting the improbable	9
1.6 The multinomial distribution: histograms	10
1.7 The Gaussian distribution: measure of normality	12
1.8 The exponential distribution: Waiting for Godot	14
1.9 Moment-generating function	16
1.10 Moment-generating function of a linear combination of variates	17
1.11 Binomial moment-generating function	20
1.12 Poisson moment-generating function	22
1.13 Multinomial moment-generating function	24
1.14 Gaussian moment-generating function	26
1.15 Central Limit Theorem: why things seem mostly normal	28
1.16 Characteristic function	32
1.17 The uniform distribution	34
1.18 The chi-square ( $\chi^2$ ) distribution	38
1.19 Student’s $t$ distribution	41
1.20 Inference and estimation	45
1.21 The principle of maximum entropy	46
1.22 Shannon entropy function	49
1.23 Entropy and prior information	49
1.24 Method of maximum likelihood	54
1.25 Goodness of fit: maximum likelihood, chi-square, and $P$ -values	61
1.26 Order and extremes	72
	vii

viii	<i>Contents</i>	
	1.27 Bayes' theorem and the meaning of ignorance	74
	Appendices	84
	1.28 Rules of conditional probability	84
	1.29 Probability density of a sum of uniform variates $U(0,1)$	85
	1.30 Probability density of a $\chi^2$ variate	86
	1.31 Probability density of the order statistic $Y_{(i)}$	87
	1.32 Probability density of Student's $t$ distribution	89
2	The "fundamental problem" of a practical physicist	91
	2.1 Bayes' problem: solution 1 (the uniform prior)	91
	2.2 Bayes' problem: solution 2 (Jaynes' prior)	96
	2.3 Comparison of the two solutions	98
	2.4 The Silverman–Bayes experiment	100
	2.5 Variations on a theme of Bayes	104
3	"Mother of all randomness"	112
	Part I The random disintegration of matter	112
	3.1 Quantum randomness: is " <i>the force</i> " with us?	112
	3.2 The gamma coincidence experiment	117
	3.3 Delusion of layered histograms	121
	3.4 Elementary statistics of nuclear decay	122
	3.5 Detrending a time series	128
	3.6 Time series: correlations and ergodicity	129
	3.7 Periodicity and the sampling theorem	133
	3.8 Power spectrum and correlation	138
	3.9 Spectral resolution and uncertainty	146
	3.10 The non-elementary statistics of nuclear decay	152
	3.11 Recurrence, autocorrelation, and periodicity	154
	3.12 Limits of detection	160
	3.13 Patterns of randomness: runs	163
	3.14 Patterns of randomness: intervals	175
	3.15 Final test: intervals, runs, and histogram shapes	177
	3.16 Conclusions and surprises: the search goes on	181
	Appendices	188
	3.17 Power spectrum completeness relation	188
	3.18 Distributions of spectral variables and autocorrelation functions	189
4	"Mother of all randomness"	194
	Part II The random creation of light	194
	4.1 The enigma of light	194
	4.2 Quantum vs classical statistics	199
	4.3 Occupancy and probability functions	206
	4.4 Photon fluctuations	212

<i>Contents</i>		ix
4.5	The split-beam experiment: photon correlations	226
4.6	Bits, secrecy, and photons	236
4.7	Correlation experiment with down-converted photons	240
4.8	Theory of recurrent runs	246
4.9	Runs and the single photon: lessons and implications	254
	Appendices	260
4.10	Chemical potential of massless particles	260
4.11	Evaluation of Bose–Einstein and Fermi–Dirac integrals	267
4.12	Variation in thermal photon energy with photon number $(\partial\langle E\rangle/\partial\langle N\rangle) _{T,V}$	268
4.13	Combinatorial derivation of the Bose–Einstein probability	269
4.14	Generating function for probability $[\Pr(N_n = k)]$ of $k$ successes in $n$ trials	270
5	A certain uncertainty	272
5.1	Beyond the “beginning of knowledge”	272
5.2	Simple rules: error propagation theory	274
5.3	Distributions of products and quotients	277
5.4	The uniform distribution: products and ratios	281
5.5	The normal distribution: products and ratios	287
5.6	Generation of negative moments	296
5.7	Gaussian negative moments	299
5.8	Quantum test of composite measurement theory	304
5.9	Cautionary remarks	310
5.10	Diagnostic medical indices: what do they signify?	313
5.11	Secular equilibrium	315
5.12	Half-life determination by statistical sampling: a mysterious Cauchy distribution	318
	Appendix	325
5.13	The distribution of $W = XY/Z$	325
6	“Doing the numbers” – nuclear physics and the stock market	328
6.1	The stock market is a casino	328
6.2	The details – CREF, AAPL, and GRNG	332
6.3	Theory of information $H$	340
6.4	Is there information in a stock market time series?	347
6.5	Stock price and molecular diffusion	350
6.6	Random walk as an autoregressive process	353
6.7	Stocks go UP and UP . . . and DOWN and DOWN	364
6.8	What happened to the law of averages?	372
6.9	Predicting the future	372
6.10	Timing is everything	378
	Appendices	384

x	<i>Contents</i>	
	6.11 Information inequality $H(A B) \leq H(A)$	384
	6.12 Power spectral density of an autoregressive time series	385
	6.13 Exact maximum likelihood estimate of AR(1) parameters	385
	6.14 Statistics of gambling and law of averages	387
7	On target: uncertainties of projectile flight	390
	7.1 Knowing where they come down	390
	7.2 Distribution of projectile ranges	392
	7.3 Energy vs speed: a test of hypotheses	401
	7.4 Play ball! – home runs and steroids	404
	7.5 Air resistance	409
	7.6 Theory of flight	419
	7.7 “Fly(ing) ball” – spin and lift	425
	7.8 Falling out of the sky is a drag	432
	7.9 Descent without power: how to rescue a jumbo jet disabled in flight	441
	Appendices	453
	7.10 Distribution and variation of projectile range $R(V, \Theta)$	453
	7.11 Unbiased estimator of skewness	455
8	The guesses of groups	457
	8.1 A radical hypothesis	457
	8.2 A mathematical truism?	463
	8.3 Condorcet’s jury theorem	465
	8.4 Epimenides “paradox of experts”	470
	8.5 The Silverman GOG experiments	471
	8.6 Interpretation of the GOG experiments	476
	8.7 Mining groups for information: Galton’s democratic model	480
	8.8 Mining groups for information: Silverman’s Mixed-NU model	483
	8.9 The BBC–Silverman experiments: the reach of television	488
	8.10 The log-normal distribution: a fundamental model of group judgment?	495
	8.11 Conclusions: so how “wise” are crowds?	506
	Appendices	509
	8.12 Derivation of the jury theorem	509
	8.13 Solution to logic problem #1: how old are the children?	510
	8.14 Solution to logic problem #2: where is the treasure?	510
	8.15 Origins and features of a log-normal distribution	511
9	The random flow of energy	515
	Part I Power to the people	515
	9.1 A different kind of law	515
	9.2 Examining the data: time and autocorrelations	516
	9.3 Examining the data: frequency and power spectra	523

<i>Contents</i>		xi
9.4	Seeking a solution: the construction of models	526
9.5	Autoregressive (AR) time series	527
9.6	Moving average (MA) time series	530
9.7	Combinations: autoregressive moving average time series	533
9.8	Phase one: exploration of autoregressive solutions	534
9.9	Phase two: adaptive and deterministic oscillations	543
9.10	Phase three: exploration of moving average solutions	547
9.11	Phase four: judgment – which model is best?	554
9.12	Electric shock!	561
9.13	Two scenarios: coincidence or conspiracy?	565
	Appendices	568
9.14	Solution of the $AR(12)_{1,12}$ master equation	568
9.15	Maximum likelihood estimate of $AR(n)$ parameters	569
9.16	Akaike information criterion and log-likelihood	570
9.17	Line of regression to 12-month moving average	570
10	The random flow of energy	573
	Part II A warning from the weather under ground	573
10.1	What lies above?	573
10.2	What lies beneath?	577
10.3	Autocorrelation of underground temperature	580
10.4	Fourier transform and power spectrum of underground temperature	582
10.5	Energy diffusion: approach I – deterministic	589
10.6	Energy diffusion: approach II – stochastic	594
10.7	Interpreting the waveforms	597
10.8	Climate implications	602
	Appendices	609
10.9	Absorption of solar radiation by a sphere	609
10.10	Autocorrelation of a decaying oscillator	609
	<i>Bibliography</i>	611
	<i>Index</i>	613
