<b>Part I Theoretical Fundamentals</b>		<b>1</b>
<b>1</b>	<b>Games and mechanisms for networked systems: incentives and algorithms</b>	<b>3</b>
	Anil Kumar Chorppepath, Tansu Alpcan, and Holger Boche	
1.1	Introduction	3
1.2	System model	6
1.3	Interference and utility function models	8
1.4	Pricing mechanisms for multi-carrier wireless systems	10
	1.4.1 Net utility maximization	12
	1.4.2 Alternative designer objectives	15
1.5	Learning in pricing mechanisms	17
1.6	Auction-based mechanisms	19
1.7	Discussion and open problems	28
	References	28
<b>2</b>	<b>Competition in wireless systems via Bayesian interference games</b>	<b>32</b>
	Sachin Adlakha, Ramesh Johari, and Andrea Goldsmith	
2.1	Introduction	32
2.2	Static Gaussian interference games	35
	2.2.1 Preliminaries	35
	2.2.2 The Gaussian interference game with unknown channel gains	36
	2.2.3 Bayesian Gaussian interference game	38
2.3	Sequential interference games with incomplete information	41
	2.3.1 A two-stage sequential game	41
	2.3.2 A sequential game with entry	44
2.4	Repeated games with entry: the reputation effect	45
	2.4.1 A repeated SBGI-E game	46
	2.4.2 Sequential equilibrium of the repeated game	47
2.5	Conclusion	49

2.6	Appendix	50
	References	55
<b>3</b>	<b>Reacting to the interference field</b>	<b>57</b>
	Mérouane Debbah and Hamidou Tembine	
3.1	Introduction	57
3.1.1	Spectrum access as a game	57
3.1.2	Cognitive access game	57
3.1.3	Mean-field game approach	58
3.1.4	Interference management in large-scale networks	58
3.1.5	Objectives	59
3.1.6	Structure of the chapter	59
3.1.7	Notations	60
3.2	Wireless model	60
3.2.1	Channel model	61
3.2.2	Mobility model	62
3.2.3	Path-loss model	62
3.2.4	Remaining energy dynamics	63
3.2.5	Queue dynamics	63
3.2.6	SINR model	63
3.3	Game-theoretic formulations	64
3.4	Reaction to the interference field	64
3.4.1	Introduction to mean-field games	64
3.4.2	The interference field	67
3.5	Mean-field stochastic game	67
3.5.1	On a game with one-and-half player	68
3.5.2	Strategies and payoffs	68
3.5.3	Mean-field equilibrium	69
3.5.4	Structure of the optimal strategy	69
3.5.5	Performance	70
3.5.6	Mean-field deterministic game	70
3.5.7	Hierarchical mean-field game	71
3.6	Discussions	71
3.7	Conclusions	72
3.8	Open issues	72
	Acknowledgements	73
	References	73
<b>4</b>	<b>Walrasian model for resource allocation and transceiver design in interference networks</b>	<b>75</b>
	Eduard A. Jorswieck and Rami Mochaourab	
4.1	Consumer theory	76

4.1.1	Standard consumer theory	77
4.1.2	Consumer theory for utility $\alpha - \beta x_1 + \gamma x_1 x_2$	79
4.1.3	Example 1: Protected and shared bands	80
4.1.4	Example 2: Two-user MISO interference channel	85
4.1.5	Example 3: Multi-carrier interference channel	89
4.1.6	Discussion and comparison of consumer models	91
4.2	Walrasian market model	92
4.2.1	Existence of a Walrasian equilibrium	92
4.2.2	Uniqueness of the Walrasian equilibrium	94
4.2.3	Convergence of a tâtonnement process	95
4.2.4	Efficiency of a Walrasian equilibrium	95
4.2.5	Example 1: Two-user protected and shared bands	96
4.2.6	Example 2: Two-user MISO interference channel	99
4.2.7	Example 3: MC interference channel	103

<b>5</b>	<b>Power allocation and spectrum sharing in wireless networks: an implementation theory approach</b>	<b>108</b>
	Ali Kakhbod, Ashutosh Nayyar, Shrutivandana Sharma, and Demosthenis Teneketzis	
5.1	Introduction	108
5.1.1	Chapter organization	109
5.2	What is implementation theory?	109
5.2.1	Game forms/mechanisms	110
5.2.2	Implementation in different types of equilibria	111
5.2.3	Desirable properties of game forms	114
5.2.4	Key results on implementation theory	115
5.3	Nash implementation for social welfare maximization and weak Pareto optimality	118
5.3.1	The model ( $M_{PSA}$ )	118
5.3.2	The power allocation and spectrum sharing problem	121
5.3.3	Constructing a game form for the decentralized power and spectrum allocation problem	122
5.3.4	Social welfare maximizing power allocation in a single frequency band	125
5.3.5	Weakly Pareto optimal power and spectrum allocation	127
5.3.6	Interpreting Nash equilibrium	129
5.3.7	Other approaches to power allocation and spectrum sharing	130
5.4	Revenue maximization	131
5.4.1	The model	132
5.4.2	Impossibility result from implementation theory	133
5.4.3	Purely spectrum allocation problem	133
5.4.4	Purely power allocation problem	140
5.4.5	Other models and approaches on revenue maximization	140

	5.5 Conclusion and reflections	141

<b>Part II Cognitive radio and sharing of unlicensed spectrum</b>		<b>227</b>
<b>8</b>	<b>Cooperation in cognitive radio networks: from access to monitoring</b>	<b>229</b>
	Walid Saad and H. Vincent Poor	
8.1	Introduction	229
8.1.1	Cooperation in cognitive radio: mutual benefits and costs	229
8.2	An overview of coalitional game theory	231
8.3	Cooperative spectrum exploration and exploitation	233
8.3.1	Motivation	233
8.3.2	Basic problem	234
8.3.3	Joint sensing and access as a cooperative game	238
8.3.4	Coalition formation algorithm for joint sensing and access	240
8.3.5	Numerical results	242
8.4	Cooperative primary user activity monitoring	244
8.4.1	Motivation	244
8.4.2	Primary user activity monitoring: basic model	245
8.4.3	Cooperative primary user monitoring	247
8.4.4	Numerical results	254
8.5	Summary	257
