<i>Preface</i>	<i>page xv</i>
Part I Field theory	
1 Microscopic theory of radiation	3
1.1 Blackbody radiation	3
1.2 Einstein coefficients	5
1.3 Quantum field theory	7
2 Lorentz invariance and second quantization	10
2.1 Lorentz invariance	10
2.2 Classical plane waves as oscillators	17
2.3 Second quantization	20
Problems	27
3 Classical field theory	29
3.1 Hamiltonians and Lagrangians	29
3.2 The Euler–Lagrange equations	31
3.3 Noether’s theorem	32
3.4 Coulomb’s law	37
3.5 Green’s functions	39
Problems	42
4 Old-fashioned perturbation theory	46
4.1 Lippmann–Schwinger equation	47
4.2 Early infinities	52
Problems	55
5 Cross sections and decay rates	56
5.1 Cross sections	57
5.2 Non-relativistic limit	63
5.3 $e^+e^- \rightarrow \mu^+\mu^-$ with spin	65
Problems	67
6 The S-matrix and time-ordered products	69
6.1 The LSZ reduction formula	70
6.2 The Feynman propagator	75
Problems	77

7	Feynman rules	78
7.1	Lagrangian derivation	79
7.2	Hamiltonian derivation	84
7.3	Momentum-space Feynman rules	93
7.4	Examples	97
7.A	Normal ordering and Wick's theorem	100
	Problems	103
Part II Quantum electrodynamics		107
8	Spin 1 and gauge invariance	109
8.1	Unitary representations of the Poincaré group	109
8.2	Embedding particles into fields	113
8.3	Covariant derivatives	120
8.4	Quantization and the Ward identity	123
8.5	The photon propagator	128
8.6	Is gauge invariance real?	130
8.7	Higher-spin fields	132
	Problems	138
9	Scalar quantum electrodynamics	140
9.1	Quantizing complex scalar fields	140
9.2	Feynman rules for scalar QED	142
9.3	Scattering in scalar QED	146
9.4	Ward identity and gauge invariance	147
9.5	Lorentz invariance and charge conservation	150
	Problems	155
10	Spinors	157
10.1	Representations of the Lorentz group	158
10.2	Spinor representations	163
10.3	Dirac matrices	168
10.4	Coupling to the photon	173
10.5	What does spin $\frac{1}{2}$ mean?	174
10.6	Majorana and Weyl fermions	178
	Problems	181
11	Spinor solutions and <i>CPT</i>	184
11.1	Chirality, helicity and spin	185
11.2	Solving the Dirac equation	188
11.3	Majorana spinors	192
11.4	Charge conjugation	193
11.5	Parity	195

Contents

ix

11.6 Time reversal	198
Problems	201
12 Spin and statistics	205
12.1 Identical particles	206
12.2 Spin-statistics from path dependence	208
12.3 Quantizing spinors	211
12.4 Lorentz invariance of the S -matrix	212
12.5 Stability	215
12.6 Causality	219
Problems	223
13 Quantum electrodynamics	224
13.1 QED Feynman rules	225
13.2 γ -matrix identities	229
13.3 $e^+e^- \rightarrow \mu^+\mu^-$	230
13.4 Rutherford scattering $e^-p^+ \rightarrow e^-p^+$	234
13.5 Compton scattering	238
13.6 Historical note	246
Problems	248
14 Path integrals	251
14.1 Introduction	251
14.2 The path integral	254
14.3 Generating functionals	261
14.4 Where is the $i\varepsilon$?	264
14.5 Gauge invariance	267
14.6 Fermionic path integral	269
14.7 Schwinger–Dyson equations	272
14.8 Ward–Takahashi identity	277
Problems	283
Part III Renormalization	285
15 The Casimir effect	287
15.1 Casimir effect	287
15.2 Hard cutoff	289
15.3 Regulator independence	291
15.4 Scalar field theory example	296
Problems	299
16 Vacuum polarization	300
16.1 Scalar ϕ^3 theory	302
16.2 Vacuum polarization in QED	304

16.3	Physics of vacuum polarization	309
	Problems	314
17	The anomalous magnetic moment	315
17.1	Extracting the moment	315
17.2	Evaluating the graphs	318
	Problems	321
18	Mass renormalization	322
18.1	Vacuum expectation values	323
18.2	Electron self-energy	324
18.3	Pole mass	330
18.4	Minimal subtraction	334
18.5	Summary and discussion	336
	Problems	338
19	Renormalized perturbation theory	339
19.1	Counterterms	339
19.2	Two-point functions	342
19.3	Three-point functions	345
19.4	Renormalization conditions in QED	349
19.5	$Z_1 = Z_2$: implications and proof	350
	Problems	354
20	Infrared divergences	355
20.1	$e^+e^- \rightarrow \mu^+\mu^- (+\gamma)$	356
20.2	Jets	364
20.3	Other loops	366
20.A	Dimensional regularization	373
	Problems	380
21	Renormalizability	381
21.1	Renormalizability of QED	382
21.2	Non-renormalizable field theories	386
	Problems	393
22	Non-renormalizable theories	394
22.1	The Schrödinger equation	395
22.2	The 4-Fermi theory	396
22.3	Theory of mesons	400
22.4	Quantum gravity	403
22.5	Summary of non-renormalizable theories	407
22.6	Mass terms and naturalness	407
22.7	Super-renormalizable theories	414
	Problems	416

Contents

xi

23 The renormalization group	417
23.1 Running couplings	419
23.2 Renormalization group from counterterms	423
23.3 Renormalization group equation for the 4-Fermi theory	426
23.4 Renormalization group equation for general interactions	429
23.5 Scalar masses and renormalization group flows	435
23.6 Wilsonian renormalization group equation	442
Problems	450
24 Implications of unitarity	452
24.1 The optical theorem	453
24.2 Spectral decomposition	466
24.3 Polology	471
24.4 Locality	475
Problems	477
Part IV The Standard Model	479
25 Yang–Mills theory	481
25.1 Lie groups	482
25.2 Gauge invariance and Wilson lines	488
25.3 Conserved currents	493
25.4 Gluon propagator	495
25.5 Lattice gauge theories	503
Problems	506
26 Quantum Yang–Mills theory	508
26.1 Feynman rules	509
26.2 Attractive and repulsive potentials	512
26.3 $e^+e^- \rightarrow$ hadrons and α_s	513
26.4 Vacuum polarization	517
26.5 Renormalization at 1-loop	521
26.6 Running coupling	526
26.7 Defining the charge	529
Problems	533
27 Gluon scattering and the spinor-helicity formalism	534
27.1 Spinor-helicity formalism	535
27.2 Gluon scattering amplitudes	542
27.3 $gg \rightarrow gg$	545
27.4 Color ordering	548
27.5 Complex momenta	551
27.6 On-shell recursion	555
27.7 Outlook	558
Problems	559

28 Spontaneous symmetry breaking	561
28.1 Spontaneous breaking of discrete symmetries	562
28.2 Spontaneous breaking of continuous global symmetries	563
28.3 The Higgs mechanism	575
28.4 Quantization of spontaneously broken gauge theories	580
Problems	583
29 Weak interactions	584
29.1 Electroweak symmetry breaking	584
29.2 Unitarity and gauge boson scattering	588
29.3 Fermion sector	592
29.4 The 4-Fermi theory	602
29.5 CP violation	605
Problems	614
30 Anomalies	616
30.1 Pseudoscalars decaying to photons	617
30.2 Triangle diagrams with massless fermions	622
30.3 Chiral anomaly from the integral measure	628
30.4 Gauge anomalies in the Standard Model	631
30.5 Global anomalies in the Standard Model	634
30.6 Anomaly matching	638
Problems	640
31 Precision tests of the Standard Model	641
31.1 Electroweak precision tests	642
31.2 Custodial $SU(2)$, ρ , S , T and U	653
31.3 Large logarithms in flavor physics	657
Problems	666
32 Quantum chromodynamics and the parton model	667
32.1 Electron–proton scattering	668
32.2 DGLAP equations	677
32.3 Parton showers	682
32.4 Factorization and the parton model from QCD	685
32.5 Lightcone coordinates	695
Problems	698
Part V Advanced topics	701
33 Effective actions and Schwinger proper time	703
33.1 Effective actions from matching	704
33.2 Effective actions from Schwinger proper time	705
33.3 Effective actions from Feynman path integrals	711
33.4 Euler–Heisenberg Lagrangian	713

Contents	xiii
33.5 Coupling to other currents	722
33.6 Semi-classical and non-relativistic limits	725
33.A Schwinger's method	728
Problems	732
34 Background fields	733
34.1 1PI effective action	735
34.2 Background scalar fields	743
34.3 Background gauge fields	752
Problems	758
35 Heavy-quark physics	760
35.1 Heavy-meson decays	762
35.2 Heavy-quark effective theory	765
35.3 Loops in HQET	768
35.4 Power corrections	772
Problems	775
36 Jets and effective field theory	776
36.1 Event shapes	778
36.2 Power counting	780
36.3 Soft interactions	782
36.4 Collinear interactions	790
36.5 Soft-Collinear Effective Theory	795
36.6 Thrust in SCET	802
Problems	810
Appendices	813
Appendix A Conventions	815
A.1 Dimensional analysis	815
A.2 Signs	817
A.3 Feynman rules	819
A.4 Dirac algebra	820
Problems	821
Appendix B Regularization	822
B.1 Integration parameters	822
B.2 Wick rotations	823
B.3 Dimensional regularization	825
B.4 Other regularization schemes	830
Problems	833
<i>References</i>	834
<i>Index</i>	842
