 case studies
 Alan, $\sqrt{2}$ is irrational, 200
 Amelia and the graphic calculator, 90–1, 159
 Chris natural limit concept, 274–5, 279

- Colin, problematic embodied limit, 277–8, 280
- comparing undergraduates and doctoral students, 340
- cutting a square into 2, 3, 5 squares, 179–80
- Deb Kollar, algebra, 129
- Dillon, procedural integration, 161–3
- Emily's words at eighteen months, 35
- Fabio, quadratic formula, 127–8
- first-year group theory, 339
- Gauss Little Theorem, 193
- Gavin, counting with fingers, 43
- graduate Chris, abundant numbers, 342
- Harry and place value, 137
- how many counters?, 184–6
- Jay, counting back, 15–9, 43
- John and Peter Key Stage, 1, 4
- Karen, solving, 15–9, 43–4
- Malcolm, embodied maximum in calculus, 334
- Nic count-up, 42
- Philip, counting with toes, 43
- Rebecca 2+8, 41
- recapitulating Stuart calculating 8+6, 176
- Rolf, problematic procedural approach, 278–9, 280
- Ross, formal limit concept, 275–7, 279–80
- Simon and Mr. Triangle, 36–7
- Simon's words at eighteen months, 35
- student anxiety, 127
- teaching the power law, 146–7
- two-fifths of twenty five, 160
- categorization, 15, 21, 50, 51–61, 82, 133
in geometry, 54–7
- category theory, 397
- Cauchy, Augustin–Louis, 271, 294
- Cauchy infinitesimal as a variable, 373
- Cauchy sequence, 271, 272, 379–80
- Chace, Arnold, 218
- chain rule, 310–12
- Child, James, 266, 291
- chimpanzee, 33–4
- Chin, Erh Tsung (Abe), 262, 263
- Chin, Kin Eng, 114–15, 430
- Chinese number system, 220–1
- classifying routes to formal mathematical thinking, 279–80
- Clement, John, 104
- Clements, Doug, 54
- Collis, Kevin, 59, 102, 425, 426
- comparison of theoretical frameworks, 281–4
- completeness, 282, 338, 361
as a crystalline structure, 360
mathematical analysis, 373
only one complete ordered field, 353–5
as a second order property, 376
- completeness axiom, 272, 375
- completing the square, 229
- complex numbers, 113, 231–50, 251
additive inverse, 102
as a blend, 82, 237, 269
as a coherent mathematical idea, 87
multiplication embodied, 167
power law, 113
- complex roots of unity, 168–9
- composite function, 310–12
- compression, 6, 28, 50,
See also categorization; definition; encapsulation
from action to embodied object, 157–9
from addition to sum $2+3=5$, 157
algebraic expressions as functions, 67
into concepts that have structure, 148
from count-all through count-on,
count-on-from-larger,
known fact, 41
from counting to number five, 157
embodied, 155–6, 302, 406
fractions as rational numbers, 66
in the fundamental theorem of
calculus, 324
of knowledge, 14–16, 156–63, 429
lack of, 125–6
in number symbolism by Simon
Stevin, 222
from potentially infinite proof to finite
proof, 197–8
from process to procept, 56
from schema to object, 62
from a sequence of terms to a varying
term, 265
signed numbers, 66
symbolic, 155–6, 173, 302, 406
into thinkable concepts, 50, 51,
159–60
vectors, 67–70
- compression, connection and
blending, 50–83
- computer, 248–50
calculus, 297
visualizing fractions, 96
- concept image, definition, 81
- conceptions spontaneous, 423
- conceptions supportive and problematic,
114–15, 130
- conceptual embodiment. *See* three
worlds of mathematics
- conceptual thinking, 397
- condensation, 63
- conjectures, 388
- connection, 50
- connectionist, 416–17

- contextual role of an axiom or definition, 262
- continued fraction, 225–6
- continuity
- in different contexts, 320
 - drawn with a pencil, 321–2
 - dynamic, 289–90, 320–1
 - formal, 318
 - from dynamic to formal, 318–22
 - over a real interval, 321
 - pointwise, 377
 - in a topological space, 391
 - uniform, 377
- convince yourself, a friend, an enemy, 179
- Corbin, Juliet, 273
- Cornu, Bernard, 265, 423
- counting, 89–91
- count all, 41, 157
 - count back to, 42
 - count both, 157
 - count on, 41, 157
 - count on from larger, 41, 157
 - count up, 42
 - problematic relation with measuring, 97–9
 - take away, 42
- Courant, Richard, criticises Leibniz, 364
- Crick, Francis, 13, 33, 428
- crystalline concept, 15, 27–8, 50, 141, 357, 373, 429
- Platonic concept, 57–9
 - procept, 46–7
- crystalline structure, 429
- crystallization, 425
- cubic equation, 230–2
- Davis and Hersh, 386, 412
- Davis, Gary, 426
- Davis, Robert, 62
- De Morgan, Augustus, 237
- Deacon, Terence, 1, 428
- decade of the brain, 138
- decision set, 382
- Dedekind cut, 271–2, 355, 364, 367
- Dedekind, Richard, 270, 271–2, 273, 361, 379
- deficient number, 342
- definition, 71–6
- in arithmetic and algebra, 75
 - in geometry, 72
 - in set-theory, 76
- DeMarois, Phil, 67
- Descartes, René, 138, 232–4, 250, 251, 272, 421
- didactic cut. *See* linear equation
