### 1 Untyped lambda calculus

1.1 Input–output behaviour of functions | 1
1.2 The essence of functions | 2
1.3 Lambda-terms | 4
1.4 Free and bound variables | 8
1.5 Alpha conversion | 9
1.6 Substitution | 11
1.7 Lambda-terms modulo $\alpha$-equivalence | 14
1.8 Beta reduction | 16
1.9 Normal forms and confluence | 19
1.10 Fixed Point Theorem | 24
1.11 Conclusions | 26
1.12 Further reading | 27
Exercises | 29

### 2 Simply typed lambda calculus

2.1 Adding types | 33
2.2 Simple types | 34
2.3 Church-typing and Curry-typing | 36
2.4 Derivation rules for Church’s $\lambda\rightarrow$ | 39
2.5 Different formats for a derivation in $\lambda\rightarrow$ | 44
2.6 Kinds of problems to be solved in type theory | 46
2.7 Well-typedness in $\lambda\rightarrow$ | 47
2.8 Type Checking in $\lambda\rightarrow$ | 50
2.9 Term Finding in $\lambda\rightarrow$ | 51
2.10 General properties of $\lambda\to$ 53
2.11 Reduction and $\lambda\to$ 59
2.12 Consequences 63
2.13 Conclusions 64
2.14 Further reading 65
Exercises 66

3 Second order typed lambda calculus 69
3.1 Type-abstraction and type-application 69
3.2 $\Pi$-types 71
3.3 Second order abstraction and application rules 72
3.4 The system $\lambda_2$ 73
3.5 Example of a derivation in $\lambda_2$ 76
3.6 Properties of $\lambda_2$ 78
3.7 Conclusions 80
3.8 Further reading 80
Exercises 82

4 Types dependent on types 85
4.1 Type constructors 85
4.2 Sort-rule and var-rule in $\lambda\omega$ 88
4.3 The weakening rule in $\lambda\omega$ 90
4.4 The formation rule in $\lambda\omega$ 93
4.5 Application and abstraction rules in $\lambda\omega$ 94
4.6 Shortened derivations 95
4.7 The conversion rule 97
4.8 Properties of $\lambda\omega$ 99
4.9 Conclusions 100
4.10 Further reading 100
Exercises 101

5 Types dependent on terms 103
5.1 The missing extension 103
5.2 Derivation rules of $\lambda P$ 105
5.3 An example derivation in $\lambda P$ 107
5.4 Minimal predicate logic in $\lambda P$ 109
5.5 Example of a logical derivation in $\lambda P$ 115
5.6 Conclusions 118
5.7 Further reading 119
Exercises 121

6 The Calculus of Constructions 123
6.1 The system $\lambda C$ 123
6.2 The $\lambda$-cube 125
Contents

6.3 Properties of $\lambda C$ 128
6.4 Conclusions 132
6.5 Further reading 133
Exercises 134

7 The encoding of logical notions in $\lambda C$ 137
7.1 Absurdity and negation in type theory 137
7.2 Conjunction and disjunction in type theory 139
7.3 An example of propositional logic in $\lambda C$ 144
7.4 Classical logic in $\lambda C$ 146
7.5 Predicate logic in $\lambda C$ 150
7.6 An example of predicate logic in $\lambda C$ 154
7.7 Conclusions 157
7.8 Further reading 159
Exercises 162

8 Definitions 165
8.1 The nature of definitions 165
8.2 Inductive and recursive definitions 167
8.3 The format of definitions 168
8.4 Instantiations of definitions 170
8.5 A formal format for definitions 172
8.6 Definitions depending on assumptions 174
8.7 Giving names to proofs 175
8.8 A general proof and a specialised version 178
8.9 Mathematical statements as formal definitions 180
8.10 Conclusions 182
8.11 Further reading 183
Exercises 185

9 Extension of $\lambda C$ with definitions 189
9.1 Extension of $\lambda C$ to the system $\lambda D_0$ 189
9.2 Judgements extended with definitions 190
9.3 The rule for adding a definition 192
9.4 The rule for instantiating a definition 193
9.5 Definition unfolding and $\delta$-conversion 197
9.6 Examples of $\delta$-conversion 200
9.7 The conversion rule extended with $\Delta$ 202
9.8 The derivation rules for $\lambda D_0$ 203
9.9 A closer look at the derivation rules of $\lambda D_0$ 204
9.10 Conclusions 206
9.11 Further reading 207
Exercises 208
## Contents

10 **Rules and properties of \( \lambda D \)**
- 10.1 Descriptive versus primitive definitions 211
- 10.2 Axioms and axiomatic notions 212
- 10.3 Rules for primitive definitions 214
- 10.4 Properties of \( \lambda D \) 215
- 10.5 Normalisation and confluence in \( \lambda D \) 219
- 10.6 Conclusions 221
- 10.7 Further reading 221
Exercises 223

11 **Flag-style natural deduction in \( \lambda D \)**
- 11.1 Formal derivations in \( \lambda D \) 225
- 11.2 Comparing formal and flag-style \( \lambda D \) 228
- 11.3 Conventions about flag-style proofs in \( \lambda D \) 229
- 11.4 Introduction and elimination rules 232
- 11.5 Rules for constructive propositional logic 234
- 11.6 Examples of logical derivations in \( \lambda D \) 237
- 11.7 Suppressing unaltered parameter lists 239
- 11.8 Rules for classical propositional logic 240
- 11.9 Alternative natural deduction rules for \( \vee \) 243
- 11.10 Rules for constructive predicate logic 246
- 11.11 Rules for classical predicate logic 249
- 11.12 Conclusions 252
- 11.13 Further reading 253
Exercises 254

12 **Mathematics in \( \lambda D \): a first attempt**
- 12.1 An example to start with 257
- 12.2 Equality 259
- 12.3 The congruence property of equality 262
- 12.4 Orders 264
- 12.5 A proof about orders 266
- 12.6 Unique existence 268
- 12.7 The descriptor \( \iota \) 271
- 12.8 Conclusions 274
- 12.9 Further reading 275
Exercises 276

13 **Sets and subsets**
- 13.1 Dealing with subsets in \( \lambda D \) 279
- 13.2 Basic set-theoretic notions 282
- 13.3 Special subsets 287
- 13.4 Relations 288

## Contents

### Appendix A  Logic in $\lambda D$
- A.1 Constructive propositional logic 391  
- A.2 Classical propositional logic 393  
- A.3 Constructive predicate logic 395  
- A.4 Classical predicate logic 396

### Appendix B  Arithmetical axioms, definitions and lemmas 397

### Appendix C  Two complete example proofs in $\lambda D$
- C.1 Closure under addition in $\mathbb{N}$ 403  
- C.2 The Minimum Theorem 405

### Appendix D  Derivation rules for $\lambda D$ 409
