Detailed Contents

4 Requirements for the Interpolation Functions .......................... 33

5 Heat Transfer Applications ................................................. 35
Variational Approach 35
  Example 37
Approximation of Integrals 38
One-Dimensional Steady-State Problems 39
Finite Element Formulation 40

6 One-Dimensional Steady-State Problems ............................... 42
Variational Statement 42
Finite Element Formulation 44
Numerical Results 48
Problems 49

7 The Two-Dimensional Heat-Conduction Problem ....................... 51
Variational Statement 51
Finite Element Formulation 52
Numerical Solution 59
Numerical Results 63

8 Three-Dimensional Heat-Conduction Applications with Convection
  and Internal Heat Absorption ............................................. 66
The Problem of Cooling a Radial Turbine Rotor: Overview 66
  Governing Equations 67
Finite Element Variational Formulation 68
Euler's Theorem of Variational Calculus 68
Derivation of the Variational Statement 69
Discretization of the Continuum 71
Evaluation of $dI_e/d\{T\}$ 73
  Evaluation of $dI_e/d\{T\}$ 78
  Evaluation of $dI_e/d\{T\}$ 79
  Evaluation of $dI_e/d\{T\}$ 82
The Final Set of Equations 83
  Turbine Rotor Configuration and Cooling Techniques 83
  Determination of the Hot Turbine Boundary Conditions 84
    Rotor Blade 84
    Rotor Disk Backside 85
    Rotor Hub 85
  Cooled Turbine Rotor Calculations 85
    Rotor Disk Cooling 86
    Blade Cooling through a Slot 86
    Blade Cooling through Radially Drilled
      Holes 86
Numerical Results 87
Remark 93
