The Archaeology and Ethnography of Central Africa

The Archaeology and Ethnography of Central Africa provides the first detailed description of the prehistory of the Loango coast of West-Central Africa over the course of more than 3,000 years. The archaeological data presented in this volume comes from a pivotal area through which, as linguistic and historical reconstructions have long indicated, Bantu-speaking peoples expanded before reaching eastern and southern Africa. Despite its historical importance, the prehistory of the Atlantic coastal regions of West-Central Africa has until now remained almost unknown. James Denbow offers an imaginative approach to this subject, integrating the scientific side of fieldwork with the interplay of history, ethnography, politics, economics, and personalities. The resulting “anthropology of archaeology” highlights the connections between past and present, change and modernity, in one of the most inaccessible and poorly known regions of West-Central and southern Africa.

James Denbow is Professor of Archaeology at the University of Texas, Austin. In the 1980s, he was Senior Curator and Head of the Archaeology Department at the National Museum of Botswana, where he established and ran the Antiquities Program for the Government of Botswana. Between 1987 and 1993, he worked extensively in what is now the Republic of the Congo in Central Africa. His research has been funded by many agencies, including Fulbright, the National Science Foundation, the National Geographic Society, USAID, and the Swedish International Development Authority. He is the author of two books, Cultures and Customs of Botswana and Uncovering Botswana's Past, and has published more than forty scientific articles in journals, including Science, Current Anthropology, the Journal of Archaeological Science, the Journal of African History, History in Africa, the Journal of American Folklore, the Journal of African Archaeology, the African Archaeological Review, the South African Journal of Science, and the South African Archaeological Bulletin. His current research focuses on processes of state formation centered on the prehistoric site of Bosutswe on the eastern fringe of the Kalahari Desert.

I am indebted to a great many people who have contributed to this research and provided comments to improve its content. Above all I am grateful to Dr. Max Pitcher and Mr. Roger Simpson of Conoco (now ConocoPhillips) for initiating the project and providing the considerable financial and logistical resources needed to carry it out. Mr. Bertrand Poirier, Director of Congolaise de Développment Forestier (CDF) in Pointe Noire, was instrumental in continuing the project with Shell funding. This ensured that the plan to survey and conserve sites in the eucalyptus plantation could be completed. Many of the Congolese participants in the project have been mentioned by name at various points in the book, and I would like to extend again my gratitude to them for their hard work, dedication, and friendship.

The people who have read parts or all of the manuscript and provided their commentary have contributed more than they could know. My wife Jocelyne Denbow, who has lived through most of the adventures described here and many more, helped edit the manuscript with good humor and love. My good friend Morongwa Mosothwane also read through and commented on most of the chapters and helped steer me around some pitfalls. Colin Barrett read the manuscript and tried to teach me the arcane and mysterious differences between hyphens, en-dashes, and em-dashes – a subject of which I had been blissfully unaware my whole life. Other readers included Jan Vansina, K. Kris Hurst, Carla Klehm, Ed Wilmsen, Kate de Luna, and an anonymous reviewer who provided detailed comments for which I am extremely grateful. François Camus, Gilbert Courtois, Terry Robinson, Joseph Kimfoko-Maddunou, and Aimé Manima-Moubouha provided help and friendship in many ways during the years in which we worked in the Congo. My student Ruth Hargus helped with early ceramic analyses. I also benefited from conversations and correspondence over the years with Barnard Clist, whom I visited in Gabon, Pierre de Maret who was kind enough to put me up in Brussels, and Eileen Kose who shared her Namiba findings with me.

For my Botswana research I have benefited from so many people that I cannot possibly mention them all in the context of this book. For the work in the Tsodilo Hills and Matlapaneng of Northwestern Botswana, I continue to remember the late Alex Mateka who worked as my assistant for many years. I also miss the late Alec Campbell who was the driving force in founding the National Museum of Botswana and tirelessly encouraged the archaeological investigation of Tsodilo. Ed Wilmsen and I worked together there at Nqoma and Divuyu, and also at Matlapaneng – he under his National Science Foundation grant and I in my position with the National Museum of Botswana. Over the years, Mike and Kerstin Main, Tom Huffman, and Phenyo Thebe and his family have at various times provided vehicles, a roof over my head, friendship, help with bureaucrats, and a feeling of having a home away from home. Thank you.
