

Contents

<i>Preface</i>	<i>page ix</i>
1 Linear algebra	1
1.1 Vector spaces	1
1.2 Linear maps	3
1.3 Exact sequences	4
1.4 Quotient spaces	6
1.5 Matrix representations	7
1.6 The dual space	8
1.7 Change of basis	9
1.8 Upstairs or downstairs?	11
1.9 Inner product spaces	14
1.10 The Riesz lemma	19
1.11 Adjoint maps, transpose maps, and duality	20
Additional exercises	21
2 Multilinear algebra	30
2.1 The tensor product	30
2.2 General tensors	33
2.3 Change of basis	34
2.4 Tensors as multilinear maps	34
2.5 Symmetry types of tensors	35
2.6 Alternating tensors and the space $\bigwedge^p V$ of p -vectors	38
2.7 The exterior algebra	41
2.8 The induced linear transformation $\bigwedge T$	42
2.9 The Hodge dual	44
Additional exercises	49

vi	<i>Contents</i>	
3	Differentiation on manifolds	54
3.1	Basic topology*	54
3.2	Multivariable calculus facts	59
3.3	Coordinates	60
3.4	Differentiable manifolds	62
3.5	Smooth maps on manifolds	68
3.6	Immersions and embeddings	70
3.7	The tangent space	73
3.8	The cotangent space T_p^*M	79
3.9	The cotangent space as jet space*	81
3.10	Tensor fields	83
3.11	Differential forms	87
3.12	The exterior derivative	89
3.13	The interior product	93
3.14	Pullback	95
3.15	Pushforward	97
3.16	Integral curves and the Lie derivative	100
	Additional exercises	104
4	Homotopy and de Rham cohomology	116
4.1	Homotopy	117
4.2	The Poincaré lemma	120
4.3	de Rham cohomology	122
4.4	Diagram chasing*	125
4.5	The Mayer–Vietoris sequence*	128
	Additional exercises	134
5	Elementary homology theory	139
5.1	Simplicial complexes	139
5.2	Homology	144
5.3	The Euler characteristic	149
	Additional exercises	151
6	Integration on manifolds	158
6.1	Smooth singular homology	158
6.2	Integration on chains	159
6.3	Change of variables	160
6.4	Stokes' theorem	163
6.5	de Rham's theorem	169
	Additional exercises	174

	<i>Contents</i>	vii
7	Vector bundles	176
	7.1 The definitions	176
	7.2 Connections	181
	7.3 Cartan's moving frames and connection forms	183
	7.4 Curvature forms and the Bianchi identity	184
	7.5 Change of basis	185
	7.6 The curvature matrix and the curvature operator	186
	Additional exercises	188
8	Geometric manifolds	193
	8.1 Index gymnastics	194
	8.2 The Levi-Civita connection	199
	8.3 The Riemann curvature tensor	204
	8.4 More curvature tensors	206
	8.5 Flat manifolds	208
	8.6 Parallel transport and geodesics	212
	8.7 Jacobi fields and geodesic deviation	215
	8.8 Holonomy	216
	8.9 Hodge theory	221
	Additional exercises	225
9	The degree of a smooth map	249
	9.1 The hairy ball theorem and the Hopf fibration	252
	9.2 Linking numbers and magnetostatics	255
	9.3 The Poincaré–Hopf index theorem and the Gauss–Bonnet theorem	259
	<i>Appendix A Mathematical background</i>	263
	<i>Appendix B The spectral theorem</i>	271
	<i>Appendix C Orientations and top-dimensional forms</i>	274
	<i>Appendix D Riemann normal coordinates</i>	276
	<i>Appendix E Holonomy of an infinitesimal loop</i>	281
	<i>Appendix F Frobenius' theorem</i>	284
	<i>Appendix G The topology of electrical circuits</i>	296
	<i>Appendix H Intrinsic and extrinsic curvature</i>	308
	<i>References</i>	317
	<i>Index</i>	321
