# Contents

**Preface**  
page xi

1  **Introduction to difference equations**  
1.1 A first look at discrete equations  
1.2 The Riccati equation  
1.3 Partial difference equations  
1.4 Notes  
Exercises  

2  **Discrete equations from transformations of continuous equations**  
2.1 Special functions and linear equations  
2.2 Addition formulae  
2.3 The Painlevé equations  
2.4 Bäcklund transformations for nonlinear PDEs  
2.5 Infinite sequence of conservation laws and KdV hierarchy  
2.6 Notes  
Exercises  

3  **Integrability of P\(\Delta\)Es**  
3.1 Quadrilateral P\(\Delta\)Es  
3.2 Consistency-around-the-cube as integrability  
3.3 Lax pairs and Bäcklund transformation from CAC  
3.4 Yang–Baxter maps  
3.5 Classification of quadrilateral P\(\Delta\)Es  
3.6 Different equations on different faces of the consistency cube  
3.7 CAC for multi-component equations  
3.8 Lattice KdV, SKdV and mKdV equations  
3.9 Higher-dimensional equations: the KP class  
3.10 Notes  
Exercises

4 Interlude: Lattice equations and numerical algorithms

4.1 Padé approximants
4.2 Convergence acceleration algorithm
4.3 Rutishauser’s QD algorithm
4.4 Notes
Exercises

5 Continuum limits of lattice PDE

5.1 How to take a continuum limit
5.2 Plane-wave factors and linearization
5.3 The semi-continuous limits
5.4 Semi-discrete Lax pairs
5.5 Full continuum limit
5.6 All at once, or the double continuum limit
5.7 Continuum limits of the 9-point BSQ
5.8 Notes
Exercises

6 One-dimensional lattices and maps

6.1 Integrability of maps
6.2 The Kahan–Hirota–Kimura discretization
6.3 The QRT maps
6.4 Periodic reductions
6.5 Lax pair for the periodic reductions and construction of invariants
6.6 Pole reduction of the semi-discrete KP equation
6.7 Notes
Exercises

7 Identifying integrable difference equations

7.1 Singularity analysis of differential and difference equations
7.2 Algebraic entropy
7.3 Singularities from a geometric point of view
7.4 Notes
Exercises

8 Hirota’s bilinear method

8.1 Introduction
8.2 Soliton solutions
8.3 Hirota’s and Miwa’s equations
8.4 Reductions of the Hirota-Miwa equation
8.5 Bilinearization of a lattice equation
## Contents

8.6 Solutions in matrix form 241
8.7 Notes 245
Exercises 246

9 Multi-soliton solutions and the Cauchy matrix scheme 250
  9.1 Cauchy matrix structure for KdV-type equations 250
  9.2 Closed-form lattice equations 255
  9.3 Derivation of Lax pairs 257
  9.4 Bilinear form from soliton solutions 261
  9.5 The NQC and Q3 equations 266
  9.6 Proof of the Q3 N-soliton solution 268
  9.7 Higher-dimensional soliton systems: the KP class 272
  9.8 Notes 277
  Exercises 277

10 Similarity reductions of integrable PDEs 280
  10.1 Introduction to dimensional reductions 280
  10.2 Compatibility of lattice constraint with quad equations 284
  10.3 The linear case 285
  10.4 Similarity constraints for the lattice KdV family 289
  10.5 Notes 300
  Exercises 301

11 Discrete Painlevé equations 304
  11.1 Early discoveries of discrete Painlevé equations 305
  11.2 Discrete Painlevé equations from Sakai’s classification 307
  11.3 Coalescences and degeneracies of the discrete Painlevé equations 310
  11.4 Bäcklund and other transformations of discrete Painlevé equations 311
  11.5 Affine Weyl groups 315
  11.6 Linear problems 322
  11.7 Linearization of discrete Painlevé equations 326
  11.8 Sakai’s elliptic discrete Painlevé equation 328
  11.9 Notes 329
  Exercises 331

12 Lagrangian multiform theory 334
  12.1 Conventional Lagrange theory and its discrete analogue 335
  12.2 Lagrangian 2-form structure 343
  12.3 Lagrangian 1-form structure 352
  12.4 Notes 359
  Exercises 360
