1 Introduction	1
1.1 Why quantify environmental benefits?	1
1.2 Cost is not the only criterion for decisions	5
1.3 Cost-effectiveness analysis	6
1.4 The optimal level of pollution abatement	8
1.5 How to quantify environmental benefits	11
1.5.1 Impact pathway analysis	11
1.5.2 Why not simply ask people how much they value each impact?	12
1.6 External costs and their internalization	13
1.6.1 Definition of external costs	13
1.6.2 Policy instruments	14
1.6.3 Who is responsible, who should be targeted?	18
1.7 Scope of this book	19
References	20
2 Tools for environmental impact and damage assessment	21
2.1 Overview of tools	21
2.1.1 Starting point: the DPSIR framework	21
2.1.2 Tools for analysis of impacts and for decision making	23
2.2 Impact pathway analysis (IPA)	25
2.2.1 The steps of an IPA	25
2.2.2 Dispersion of pollutants and exposure	27
2.2.3 Exposure–response functions	27
2.2.4 Monetary valuation	31
2.2.4.1 General principle	31
2.2.4.2 Global warming	31
2.2.4.3 Valuation based on abatement costs	32

vi	Contents	
	2.2.5 Spatial and temporal boundaries of the analysis	32
	2.2.6 Software	33
	2.2.7 Environmental impact study and local impacts	34
2.3	Life cycle assessment	34
	2.3.1 Life cycle inventory	34
	2.3.2 Life cycle impact assessment	38
	2.3.3 Relation between IPA and LCA	39
2.4	Difficulties for the analysis	43
	2.4.1 Lack of data	43
	2.4.2 Boundaries of the analysis	44
	2.4.3 Nonlinearity of impacts	44
	2.4.4 Alternative tools for problematic impacts	48
	2.4.4.1 Problematic impacts	48
	2.4.4.2 Multicriteria analysis	49
	2.4.4.3 Risk comparisons	49
	2.4.4.4 The precautionary principle	50
	2.4.5 Estimation of abatement costs for CBA	51
2.5	Problems with the use of these tools	52
	2.5.1 Common problems	52
	2.5.2 Checklist for avoiding problems	52
2.6	An integrated framework for the analysis of environmental questions	56
	2.6.1 The framework	56
	2.6.2 Presenting the results	57
	2.6.3 Summarizing results	58
2.7	Conclusions	59
	References	60
3	Exposure–response functions for health impacts	63
	3.1 Overview of health impacts of pollution	64
	3.2 Methods for measuring impacts of pollutants	66
	3.2.1 Epidemiology, toxicology and experiments	66
	3.2.2 Types of epidemiological studies for air pollution	67
	3.2.3 Difficulties with epidemiological studies	68
	3.2.4 Differences between results from different studies	69
	3.2.5 Hill's criteria for causality	72
	3.3 Exposure–response function (ERF): general remarks	72
	3.3.1 ERFs and calculation of impacts	72
	3.3.2 Form of the ERF and extrapolation to low exposures	74
	3.3.3 Linear ERFs	76
	3.3.4 Accounting for a threshold in an IPA	79
	3.3.5 Relative risk and ERF	80
	3.3.6 Which pollutant causes how much health damage?	81
	3.4 ERFs for mortality	84
	3.4.1 Loss of life expectancy and number of deaths	84
	3.4.2 Studies of chronic mortality	86
	3.4.3 Loss of life expectancy for chronic mortality of adults	88
	3.4.4 Relevant exposure – cessation lag	94

Contents	vii
3.4.5 Results for acute mortality of adults	96
3.4.6 Infant mortality	97
3.4.7 Mortality impacts of O ₃	99
3.5 ERFs for morbidity	100
3.5.1 Morbidity due to PM	100
3.5.2 Morbidity due to O ₃	104
3.6 ERFs for toxic metals, dioxins and other pollutants	107
3.6.1 General remarks	107
3.6.2 Cancers	107
3.6.3 Arsenic	109
3.6.4 Cadmium	110
3.6.5 Chromium	111
3.6.6 Lead	111
3.6.7 Mercury	114
3.6.8 Nickel	116
3.6.9 Dioxins and PCBs	117
3.6.10 Benzene, butadiene, benzo(a)pyrene and formaldehyde	119
3.6.10.1 Benzene	119
3.6.10.2 1,3 Butadiene	119
3.6.10.3 Polycyclic aromatic hydrocarbons	120
3.6.10.4 Formaldehyde	121
3.6.11 Radionuclides	121
References	123
4 Impacts of air pollution on building materials	131
4.1 Introduction	131
4.2 Amenity cost	134
4.2.1 Repair costs and amenity loss	134
4.2.2 Discounting	136
4.2.3 A simple rule for amenity cost	137
4.3 The effects of air pollution on materials	138
4.3.1 General remarks	138
4.3.2 The stock at risk	139
4.3.3 Specific materials	140
4.3.3.1 Natural stone	140
4.3.3.2 Brickwork, mortar and rendering	142
4.3.3.3 Concrete	142
4.3.3.4 Paint and polymeric materials	143
4.3.3.5 Metals	143
4.3.4 Exposure–response functions	144
4.4 Estimation of damage costs: bottom-up	146
4.4.1 Calculation of repair frequency	146
4.4.2 Estimation of repair costs	146
4.4.3 Estimation of soiling costs	147
4.5 Estimation of damage costs: top-down	148
4.5.1 Data from tax deductions	148
4.5.2 Cleaning data for Paris	150
4.5.2.1 Legislation	150
4.5.2.2 Building renovation statistics for Paris	150

Contents	ix
7.3 Atmospheric dispersion far from the source	253
7.3.1 Pollutant removal	253
7.3.2 A simple model for regional dispersion	258
7.4 The Uniform World Model (UWM)	265
7.4.1 Methodology	265
7.4.2 Validation of the UWM methodology	291
7.4.3 Final remarks	312
References	313
8 Multimedia pathways	318
8.1 General considerations	318
8.2 Simplified approach for dioxins	322
8.3 Global health impacts and costs due to mercury emissions	324
8.3.1 Why a simplified approach is necessary and appropriate	324
8.3.2 The comprehensive transfer factor	326
8.3.3 Calculation of lifetime impact due to current emissions	327
8.3.4 Marginal impacts and costs per kg of emitted Hg	330
8.3.5 Discussion	334
8.4 The uniform world model for ingestion doses	337
8.4.1 Assumptions	337
8.4.2 Justification for steady state models	338
8.4.3 Dose and impacts from ingestion	340
8.4.4 Concentration in food	342
8.4.5 Direct emissions to soil or water	346
8.4.6 Results for doses	346
8.5 Results for impacts and damage costs	350
References	352
9 Monetary valuation	356
9.1 Comparing present and future costs	356
9.1.1 The effect of time on the value of money	356
9.1.2 The discount rate	358
9.1.3 The intergenerational discount rate	359
9.1.4 Evolution of costs with time	364
9.1.5 Net present value and equivalent annual values	365
9.1.6 The rule of 70 for doubling times	367
9.1.7 Comments on cost–benefit analysis (CBA)	368
9.2 Valuation methods	369
9.2.1 Market and non-market costs	369
9.2.2 Revealed preference methods	369
9.2.3 Stated preference methods	373
9.3 Valuation of mortality	377
9.3.1 Accidents	378
9.3.2 VOLY for small changes in life expectancy	379
9.3.3 Infant mortality	383
9.4 Valuation of morbidity	384
9.4.1 Cost components	384
9.4.2 Costs of work loss days	384
9.4.3 Hospitalization	385
9.4.4 Chronic bronchitis	386
