<i>Preface</i>	page	xiii
<i>List of Mathematical Symbols</i>		xv
<hr/>		
<b>I Terrestrial Biosphere Models</b>		<b>I</b>
Chapter Overview		1
1.1 Introduction		1
1.2 The Ecological Ecosystem		4
1.3 The Atmospheric Ecosystem		8
1.4 The Hydrological Ecosystem		12
1.5 One Biosphere		13
1.6 Common Language		14
1.7 Constructing a Terrestrial Biosphere Model		16
1.8 The Goals of Modeling		20
1.9 Complexity and Uncertainty		20
1.10 Intent of the Book		23
<hr/>		
<b>2 Quantitative Description of Ecosystems</b>		<b>25</b>
Chapter Overview		25
2.1 Leaf Area Index		25
2.2 Leaf Angle Distribution		28
2.3 Leaf Mass per Area		32
2.4 Canopy Nitrogen Profile		33
2.5 Root Profile		34
2.6 Ecosystem Structure		36
2.7 Supplemental Programs		39
<hr/>		
<b>3 Fundamentals of Energy and Mass Transfer</b>		<b>40</b>
Chapter Overview		40
3.1 Heat Storage		40
3.2 Radiation		41
3.3 Conduction		43
3.4 Molecular Diffusion		43
3.5 Gas Relationships		44
3.6 Atmospheric Humidity		46
3.7 Diffusive Flux Equations		48
3.8 Conductance and Resistance Networks		50
3.9 Chapter Appendix – Diffusive Flux Notation		51
<hr/>		
<b>4 Mathematical Formulation of Biological Flux Rates</b>		<b>53</b>
Chapter Overview		53
4.1 Michaelis–Menten Equation		53
4.2 Arrhenius Equation		54

viii	CONTENTS	
	4.3 Rate Modifiers	55
	4.4 First-Order, Linear Differential Equations	59
	4.5 Optimality Theory	60
	<b>5 Soil Temperature</b>	<b>64</b>
	Chapter Overview	64
	5.1 Introduction	64
	5.2 Transient, One-Dimensional Heat Conduction	65
	5.3 Numerical Implementation	66
	5.4 Soil Thermal Properties	70
	5.5 Diurnal and Annual Cycles	73
	5.6 Phase Change	75
	5.7 Supplemental Programs	78
	5.8 Modeling Projects	79
	<b>6 Turbulent Fluxes and Scalar Profiles in the Surface Layer</b>	<b>80</b>
	Chapter Overview	80
	6.1 Introduction	80
	6.2 Turbulent Fluxes	81
	6.3 Gradient–Diffusion Theory	83
	6.4 Logarithmic Profiles	84
	6.5 Monin–Obukhov Similarity Theory	85
	6.6 Aerodynamic Conductances	89
	6.7 Roughness Length	91
	6.8 Roughness Sublayer	93
	6.9 Supplemental Programs	100
	6.10 Modeling Projects	100
	<b>7 Surface Energy Fluxes</b>	<b>101</b>
	Chapter Overview	101
	7.1 Introduction	101
	7.2 Energy Balance	101
	7.3 Surface Temperature	105
	7.4 A Bucket Model Hydrologic Cycle	110
	7.5 Soil Evaporation	111
	7.6 Penman–Monteith Equation	112
	7.7 Chapter Appendix: Snowmelt	113
	7.8 Supplemental Programs	114
	7.9 Modeling Projects	114
	<b>8 Soil Moisture</b>	<b>115</b>
	Chapter Overview	115
	8.1 Introduction	115
	8.2 Measures of Soil Moisture	115
	8.3 Matric Potential and Hydraulic Conductivity	118
	8.4 Richards Equation	121
	8.5 Finite Difference Approximation	123

8.6 Iterative Numerical Solutions	127
8.7 Infiltration	130
8.8 Source and Sink Terms	131
8.9 Soil Heterogeneity	132
8.10 Supplemental Programs	132
8.11 Modeling Projects	133
<hr/>	
<b>9 Hydrologic Scaling and Spatial Heterogeneity</b>	<b>134</b>
Chapter Overview	134
9.1 Introduction	134
9.2 Infiltration	134
9.3 Runoff	136
9.4 Evapotranspiration	146
9.5 Snow Cover	147
9.6 Subgrid Tiling	149
9.7 Supplemental Programs	150
9.8 Modeling Projects	150
<hr/>	
<b>10 Leaf Temperature and Energy Fluxes</b>	<b>152</b>
Chapter Overview	152
10.1 Introduction	152
10.2 Leaf Energy Balance	153
10.3 Leaf Temperature	157
10.4 Leaf Boundary Layer	159
10.5 Characteristic Leaf Dimension	163
10.6 Energy Budget Examples	163
10.7 Supplemental Programs	165
10.8 Modeling Projects	165
<hr/>	
<b>11 Leaf Photosynthesis</b>	<b>167</b>
Chapter Overview	167
11.1 C <sub>3</sub> Photosynthesis	167
11.2 Parameter Values and Temperature Dependencies	172
11.3 Photosynthetic Response to Environmental Factors	175
11.4 Use of $V_{cmax}$ in Models	179
11.5 The Kull and Kruijt (1998) Model	181
11.6 Temperature Acclimation	183
11.7 C <sub>4</sub> Photosynthesis	185
11.8 Diffusive Limitations on CO <sub>2</sub> Supply	186
11.9 Supplemental Programs	188
11.10 Modeling Projects	188
<hr/>	
<b>12 Stomatal Conductance</b>	<b>189</b>
Chapter Overview	189
12.1 Introduction	189
12.2 Empirical Multiplicative Models	191
12.3 Semiempirical Photosynthesis-Based Models	193

x	CONTENTS	
	12.4 Solution Techniques	195
	12.5 Stomatal Response to Environmental Factors	199
	12.6 Optimality Theory	202
	12.7 Soil Moisture Stress	210
	12.8 Chapter Appendix – Cubic Equation for $A_n$	211
	12.9 Supplemental Programs	212
	12.10 Modeling Projects	212
	<b>13 Plant Hydraulics</b>	<b>213</b>
	Chapter Overview	213
	13.1 Introduction	213
	13.2 Plant Water Uptake and Leaf Water Potential	214
	13.3 Plant Hydraulics and Stomatal Conductance	218
	13.4 The Soil–Plant–Atmosphere (SPA) Model	219
	13.5 Soil-to-Root Conductance	221
	13.6 Stem Conductivity	224
	13.7 Multi-Node Models	225
	13.8 Supplemental Programs	226
	13.9 Modeling Projects	227
	<b>14 Radiative Transfer</b>	<b>228</b>
	Chapter Overview	228
	14.1 Introduction	228
	14.2 Leaf Optical Properties	229
	14.3 Light Transmission without Scattering	230
	14.4 Direct Beam Extinction Coefficient	235
	14.5 Diffuse Transmittance	239
	14.6 The Norman (1979) Model	241
	14.7 The Goudriaan and van Laar (1994) Model	246
	14.8 The Two-Stream Approximation	250
	14.9 Surface Albedo	255
	14.10 Longwave Radiation	255
	14.11 Supplemental Programs	259
	14.12 Modeling Projects	259
	<b>15 Plant Canopies</b>	<b>260</b>
	Chapter Overview	260
	15.1 Introduction	260
	15.2 Big-Leaf Models	261
	15.3 Dual-Source Models	266
	15.4 Multilayer Models	268
	15.5 Canopy Hydrology	275
	15.6 Optimality Theory	278
	15.7 Modeling Projects	279

<b>16</b>	<b>Scalar Canopy Profiles</b>	<b>280</b>
	Chapter Overview	280
	16.1 Introduction	280
	16.2 Wind Profile	282
	16.3 Scalar Continuity Equation	286
	16.4 Aerodynamic Conductance	289
	16.5 Scalar Concentration Profiles	290
	16.6 An Implicit Flux–Profile Solution	292
	16.7 Localized Near-Field Theory	295
	16.8 Chapter Appendix – Terms in Table 16.1	299
	16.9 Supplemental Programs	299
	16.10 Modeling Projects	300
<b>17</b>	<b>Biogeochemical Models</b>	<b>301</b>
	Chapter Overview	301
	17.1 Introduction	301
	17.2 Model Structure	302
	17.3 Generalized Matrix Form	307
	17.4 Allocation and Turnover	309
	17.5 Leaf Phenology	313
	17.6 Nitrogen Cycle	315
	17.7 Disturbance	317
	17.8 Supplemental Programs	320
	17.9 Modeling Projects	320
<b>18</b>	<b>Soil Biogeochemistry</b>	<b>322</b>
	Chapter Overview	322
	18.1 Introduction	322
	18.2 Exponential Decay	324
	18.3 Rate Constants	325
	18.4 Litter Cohort Models	328
	18.5 Discrete Pool Models	332
	18.6 Model Frontiers	339
	18.7 Supplemental Programs	343
	18.8 Modeling Projects	343
<b>19</b>	<b>Vegetation Demography</b>	<b>344</b>
	Chapter Overview	344
	19.1 Introduction	344
	19.2 Forest Gap Models	345
	19.3 Area-Based Dynamic Global Vegetation Models	352
	19.4 Cohort-Based Ecosystem Demography Models	357
	19.5 Chapter Appendix: LPJ Allocation	364
	19.6 Chapter Appendix: ED Allocation	364

---

<b>20</b>	<b>Canopy Chemistry</b>	<b>365</b>
	Chapter Overview	365
	20.1 Dry Deposition	365
	20.2 BVOC Emissions	367
	20.3 Dust Emissions	368
	20.4 Wildfire Emissions	369
	20.5 Reactive Nitrogen	369
	20.6 Methane	371
	20.7 Canopy–Chemistry Models	372
	20.8 Stable Isotopes	373
	<i>Appendices</i>	<b>381</b>
