	<i>Preface</i>	page ix
	<i>Acknowledgements</i>	xiii
	<i>List of notation</i>	xv
	<i>List of acronyms and abbreviations</i>	xvi
1	Introduction	1
	1.1 Wireless-channel model	2
	1.1.1 Path-loss model	2
	1.1.2 Fading model	3
	1.2 Distribution of the SINR at an arbitrary user	4
	1.3 Why SINR distributions are usually found via simulation	6
	1.4 The role of analytic modeling	7
2	Structure of the SINR calculation problem	8
	2.1 Statement of the SINR calculation problem	8
	2.1.1 Candidate serving BSs and the serving BS	8
	2.1.2 Basic definitions	9
	2.2 SINR distributions	10
	2.2.1 Joint CCDF of SINRs from candidate serving BSs	10
	2.2.2 Joint CCDF of SINRs from BSs ordered by serving BS selection criterion	11
	2.2.3 Conventions and notation	12
	2.3 The canonical SINR probability	12
	2.3.1 Form of joint CCDF of SINRs from candidate serving BSs	13
	2.3.2 Form of joint CCDF of SINRs from BSs ordered by serving BS selection criterion	13
	2.3.3 Joint CCDF of SINR in canonical probability form	14
	2.4 Calculation of the canonical probability	15
	2.4.1 Z-matrices and M-matrices	15
	2.4.2 Expressions for $\mathbb{P}\{\mathbf{A}\mathbf{X} > \tilde{\mathbf{b}}\}$	16
	2.4.3 Expressions for the canonical probability $\mathbb{P}\{\mathbf{A}\mathbf{X} > \mathcal{W}\mathbf{b}\}$	18
	2.4.4 Approximating arbitrary PDFs by mixtures of Erlang PDFs	19

2.5	Full solution to the canonical probability problem	21
2.5.1	Determining when a Z -matrix is an M -matrix	21
2.5.2	Analytic form of Laplace transform of W	21
3	Poisson point processes	23
3.1	Stochastic models for BS locations	23
3.2	Complete spatial randomness	24
3.3	The Poisson point process	25
3.4	Theorems about PPPs	26
3.4.1	Mapping theorem	26
3.4.2	Superposition theorem	28
3.4.3	Coloring theorem	28
3.4.4	Marking theorem	31
3.5	Applicability of PPP to real-world deployments	32
3.6	Other models for BS locations	34
4	SINR analysis for a single tier with fixed power	35
4.1	Introduction	35
4.2	Distribution of total interference power in a single-tier BS deployment	35
4.2.1	PPP of received powers at user from BSs in a tier	35
4.2.2	Distribution of total received power from all BSs in a tier	37
4.3	Distribution of SINR in a single-tier BS deployment	41
4.3.1	Serving BS known and fixed	42
4.3.2	A note on serving BS selection criteria	45
4.3.3	Serving BS is the one nearest to the user	45
4.3.4	Serving BS is the one received most strongly at the user	55
5	SINR analysis for multiple tiers with fixed powers	71
5.1	Introduction	71
5.2	Joint CCDF of SINR from candidate serving BSs	72
5.2.1	Candidate serving BS in each tier is the one nearest to the user	72
5.2.2	Application: camping probability in a macro-femto network	78
5.2.3	Candidate serving BS in each tier is the one received most strongly at the user	83
5.2.4	Application: coverage probability in an HCN	92
5.3	Distributions of serving tier and SINR from serving BS	98
5.3.1	Serving BS is the “nearest” (after selection bias) candidate serving BS	99
5.3.2	Serving BS is the “strongest” (after selection bias) candidate serving BS	102
5.3.3	Serving BS is the max-SINR (after selection bias) candidate serving BS	116
5.4	Selection bias and the need for interference control	119

6	SINR analysis with power control	122
6.1	Introduction	122
6.2	Power control from the transmitter perspective	122
6.3	Types of power control	123
6.4	Distribution of SINR under power control	124
6.4.1	Distribution of received power with i.i.d. BS transmit powers	124
6.4.2	SINR distribution with non-adaptive power control	125
6.4.3	Application: eICIC and feICIC in LTE	126
6.4.4	Interference power at the receiver of a given link under OLPC	128
6.4.5	Distribution of distance from BS to served user	130
6.4.6	CCDF of SINR when all BSs use OLPC	135
6.4.7	SINR distribution under CLPC	139
7	Spectral and energy efficiency analysis	141
7.1	Introduction	141
7.2	Spectral efficiency	142
7.2.1	Spectral efficiency on the link to an arbitrarily located user	142
7.2.2	Spectral efficiency of an HCN	144
7.2.3	Application: spectral efficiency of a macro-pico LTE HCN with eICIC	147
7.3	Energy efficiency	153
8	Closing thoughts: future heterogeneous networks	154
8.1	Introduction	154
8.2	Analysis of a network with D2D links	154
8.3	The role of WiFi in future HCNs	156
8.4	Evolution of the network infrastructure	157
8.5	New directions in analysis	157
Appendix A	Some common probability distributions	159
A.1	Discrete distributions	159
A.1.1	Uniform distribution	159
A.1.2	Bernoulli distribution	159
A.1.3	Binomial distribution	159
A.1.4	Poisson distribution	160
A.1.5	Negative binomial distribution	160
A.1.6	Generalized negative binomial distribution	160
A.2	Continuous distributions	160
A.2.1	Uniform distribution	160
A.2.2	Normal or Gaussian distribution	161
A.2.3	Circularly symmetric complex Gaussian distribution	161
A.2.4	Rayleigh distribution	161
A.2.5	Exponential distribution	161

A.2.6	Erlang distribution	162
A.2.7	Gamma distribution	162
A.2.8	Nakagami distribution	162
A.2.9	Lognormal distribution	162
Appendix B	HCNs in LTE	163
B.1	3GPP and LTE	163
B.2	Support for HCNs in LTE	163
