Preface	<i>page xv</i>
Acknowledgments	xix
List of Abbreviations	xxiii
Nomenclature	xxvii
1. Introduction to Computational Aerodynamics	1
1.1 Introduction	2
1.2 The Goals of Computational Aerodynamics	6
1.3 The Intelligent User	7
1.4 A Bit of Computational Aerodynamics History	10
1.5 What Can Computational Aerodynamics Do Today and Tomorrow?	19
1.5.1 Commercial Aircraft Applications	19
1.5.2 Military Aircraft Applications	22
1.6 Integration of CA and Experiments	25
1.7 Design, Analysis, and Multidisciplinary Optimization	27
1.8 The Computational Aerodynamics Process	29
1.8.1 Geometry Modeling	31
1.8.2 Grid Generation	32
1.8.3 Flow Solution	33
1.8.4 Post Processing	34
1.8.5 Code Validation	35
1.9 Computational Aerodynamics Users and Errors	37
1.10 Scope, Purpose, and Outline of the Book	38
1.11 Project	40
1.12 References	40
2. Computers, Codes, and Engineering	45
2.1 Introduction	46
2.2 From Engineering Methods to High-Performance Computing	47
2.2.1 Semi-Empirical Methods	48
2.2.2 Linear Potential Flow Methods	55
2.2.3 CFD Methods	55
2.2.4 When Should You Use a Given Method?	55

2.3	Computing Systems	59
2.3.1	Why CA Requires Large Computers	61
2.3.2	CA Historical Development	63
2.3.3	Computer Measures of Merit	66
2.3.4	Parallel Computer Scalability	71
2.4	Computer Codes: Verification, Validation, and Certification	78
2.5	Some Comments on Programming	82
2.6	Elements of a Solution	86
2.7	Projects	89
2.8	References	90
3. Getting Ready for Computational Aerodynamics:		
Fluid Mechanics Foundations		93
3.1	Introduction	94
3.2	Governing Equations of Fluid Mechanics	94
3.3	Derivation of Governing Equations	98
3.3.1	Conservation of Mass: The Continuity Equation	100
3.3.2	Conservation of Momentum and the Substantial Derivative	104
3.3.2.1	Substantial Derivative	104
3.3.2.2	Forces	107
3.3.3	The Energy Equation	113
3.4	Solution of the Set of Governing Equations	116
3.5	Standard Forms and Terminology of Governing Equations	117
3.5.1	Nondimensionalization	118
3.5.2	Use of Divergence Form	118
3.5.3	The “Standard” or “Vector” Form of the Equations	120
3.6	Boundary Conditions, Initial Conditions, and the Mathematics	
	Classification of Partial Differential Equations (PDEs)	124
3.6.1	Hyperbolic Type	126
3.6.2	Parabolic Type	126
3.6.3	Elliptic Type	127
3.6.4	Equations of Mixed Type	127
3.6.5	Elaboration on Characteristics	128
3.7	Hyperbolic PDEs	130
3.8	Parabolic PDEs	131
3.9	Elliptic PDEs	132
3.10	Boundary Conditions	133
3.11	Using and Simplifying These Equations: High- to Low-Fidelity Flowfield Models	138
3.12	Inviscid Flow Models	138
3.12.1	Potential Flow	139
3.12.2	Small Disturbance Expansion of the Full Potential and Energy Equation	141
3.12.3	Transonic Small Disturbance Equation	144

3.12.4 Prandtl-Glauert Equation	145
3.12.5 Incompressible Irrotational Flow: Laplace's Equation	146
3.13 Viscous Flow Models	147
3.13.1 Thin-Layer Navier-Stokes Equations	149
3.13.2 Parabolized Navier-Stokes Equations	152
3.13.3 Boundary-Layer Equations	153
3.14 Examples of Zones of Application	155
3.15 Requirements for a Complete Problem Formulation	156
3.16 Exercises	157
3.17 References	158
4. Getting Ready for Computational Aerodynamics: Aerodynamic Concepts	161
4.1 Introduction	162
4.2 Review of Potential Flow Theory	163
4.2.1 Vorticity	164
4.2.2 Simplified Equations of Motion	167
4.3 Potential Flow Applications	168
4.3.1 Flow Over a Circular Cylinder	169
4.3.2 Flow Over a Circular Cylinder with Circulation	173
4.4 Applications to Airfoils	177
4.4.1 Conformal Mapping	177
4.4.2 Singularity Distribution Approaches	178
4.4.3 Kutta Condition	178
4.5 Boundary Layers and Viscous Effects	179
4.5.1 Boundary Layer Concepts	179
4.5.1.1 Laminar Boundary Layers	180
4.5.1.2 Turbulent Boundary Layers	181
4.5.1.3 Relative Features of Boundary Layers	182
4.5.2 Skin Friction Estimation	184
4.6 Airfoil Aerodynamics	188
4.6.1 Airfoil Terminology	189
4.6.2 Forces and Moments on an Airfoil	189
4.6.3 Airfoil Aerodynamic Coefficients	192
4.6.4 Airfoil Lift and Drag Variations	192
4.6.5 NACA Airfoil Families	195
4.6.6 How to Use NACA Airfoil Data	196
4.6.7 Factors That Affect Airfoil Aerodynamics	198
4.6.7.1 Reynolds Number	198
4.6.7.2 Camber	198
4.6.7.3 Thickness	199
4.6.8 How Airfoils Work	199
4.6.9 Thin Airfoil Theory	204

Cambridge University Press

Contents

4.7	Wing Aerodynamics	208
4.7.1	Wing Terminology	209
4.7.2	Wing Aerodynamic Coefficients	210
4.7.3	The Vortex Filament	211
4.7.4	Prandtl's Lifting Line Theory	213
4.7.5	Subsonic Compressibility Effects	218
4.8	Transonic Aerodynamics	222
4.8.1	Transonic Theories	227
4.8.2	Supercritical Airfoils	227
4.8.3	Korn Airfoil Equation	229
4.8.4	Wing Sweep	230
4.8.5	Korn Wing Equation	235
4.9	Supersonic Aerodynamics	237
4.9.1	Supersonic Linear Theory and Airfoil Aerodynamics	240
4.9.2	Volumetric Wave Drag	245
4.9.3	Wing Aerodynamics	247
4.10	Hypersonic Aerodynamics	249
4.10.1	Importance of Temperature in Hypersonic Flow	250
4.10.2	Newtonian and Modified Newtonian Flow Theory	252
4.10.3	Aerodynamic Heating	253
4.10.4	Engine/Airframe Integration	255
4.11	Exercises	258
4.12	Projects	259
4.13	References	260
5.	Classical Linear Theory Computational Aerodynamics	264
5.1	Introduction	265
5.2	Panel Methods	267
5.2.1	The Integral Equation for the Potential	269
5.2.2	An Example of a Panel Code: The Classic Hess and Smith Method	277
5.2.3	Program <i>PANEL</i>	281
5.2.4	Geometry and Design	290
5.2.4.1	Effects of Shape Changes on Pressure Distributions	291
5.2.4.2	Shape for a Specified Pressure Distribution	291
5.2.5	Issues in the Problem Formulation for 3D Potential Flow Over Aircraft	292
5.2.6	Example Applications of Panel Methods	294
5.2.7	Using Panel Methods	299
5.2.7.1	Commonsense Rules for Panels	301
5.2.7.2	What a Panel Method Can and Cannot Do	301
5.2.8	Advanced Panel Methods: What Is a "Higher Order" Panel Method?	301

Cambridge University Press

Contents

5.2.9	Current Standard Panel Method Programs: A Brief Survey	302
5.2.9.1	<i>PAN AIR</i>	302
5.2.9.2	<i>VSAERO</i>	302
5.2.9.3	Woodward Code	304
5.2.9.4	<i>PMARC</i>	304
5.3	Vortex Lattice Methods	305
5.3.1	Boundary Conditions on the Mean Surface and the Pressure Relation	307
5.3.1.1	Linearized Form of the Boundary Condition	309
5.3.1.2	Transfer of the Boundary Conditions	310
5.3.1.3	Decomposition of Boundary Conditions into Camber/Thickness/Alpha	311
5.3.1.4	Thin Airfoil Theory Pressure Relation	312
5.3.1.5	ΔC_p due to Camber/Alpha (Thickness Effects Cancel!)	313
5.3.2	The Classical Vortex Lattice Method	317
5.3.3	Examples of the Use and Accuracy of the Vortex Lattice Method	323
5.3.3.1	The Warren 12 Test Case	323
5.3.3.2	Isolated Swept Wing	325
5.3.3.3	Wing-Body-Tail	326
5.3.3.4	Control Surface Deflection	328
5.3.3.5	Pitch and Roll Damping Estimation	328
5.3.3.6	Slender Lifting Body Results	329
5.3.3.7	Non-Planar Results	331
5.3.3.8	Ground Effects and Dihedral Effects	332
5.3.4	Inverse Design Methods and Program DesCam	334
5.3.5	Alternate and Advanced VLM Methods	336
5.3.6	Unsteady Flow Extension	337
5.3.7	Vortex Lattice Method Summary	338
5.4	Projects	339
5.5	References	344
6.	Introduction to Computational Fluid Dynamics	350
6.1	Introduction	351
6.2	Options for Numerically Solving the Navier-Stokes Equations	353
6.2.1	Finite Difference Methods	354
6.2.2	Finite Volume Methods	355
6.2.3	Finite Element/Pseudo Spectral Methods	356
6.3	Approximations to Derivatives	358
6.4	Finite Difference Methods	359
6.5	Representing Partial Differential Equations	367
6.5.1	Discretization	369
6.5.2	Consistency	370

6.5.3	Stability	370
6.5.4	Convergence	370
6.6	Stability Analysis	371
6.6.1	Fourier or Von Neumann Stability Analysis	372
6.6.2	Examples of Stability and Instability	374
6.7	The Wave Equation	377
6.7.1	Forward Difference in x	379
6.7.2	Central Difference in x	379
6.7.3	Backward Difference in x	379
6.7.4	Lax Method	380
6.7.5	Lax-Wendroff Method	381
6.7.6	MacCormack Method	381
6.8	Truncation Error Analysis of the Wave Equation: The Modified Equation	383
6.9	The Heat Equation	385
6.9.1	Explicit Scheme	386
6.9.2	Implicit Scheme	387
6.10	Laplace's Equation	389
6.11	The Finite Volume Method	391
6.12	Time Integration and Differences	396
6.12.1	Explicit Time Integration	397
6.12.1.1	First-Order Time Accuracy	397
6.12.1.2	Second-Order Time Accuracy	398
6.12.1.3	General Form of Backward Time Difference	398
6.12.1.4	Runge-Kutta Time Integration	399
6.12.2	Implicit Time Integration	400
6.12.3	Subiterations	401
6.12.4	Solution Method for Time Integration	402
6.13	Boundary Conditions	403
6.13.1	Farfield Boundary Conditions	403
6.13.2	Solid Wall Boundary Conditions	405
6.13.3	Numerical Representation of Boundary Conditions	409
6.14	Solution of Algebraic Equations	410
6.14.1	Dense Matrix	411
6.14.2	Sparse and Banded Matrix	411
6.14.3	General Sparse Matrix	412
6.14.4	Point Jacobi and Point Gauss-Seidel	413
6.14.5	Gauss-Seidel and Successive Over-Relaxation	413
6.14.6	Successive Line Over-Relaxation	415
6.14.7	Approximate Factorization	416
6.14.8	Multigrid Method	420
6.14.9	The Delta Form	421
6.15	Program <i>THINFOIL</i>	421

6.16	Modern Methods	425
6.16.1	Finite Difference Methods	425
6.16.2	Higher-Order Methods	428
6.16.3	Finite Volume Methods	430
6.17	Projects	439
6.18	References	443
7.	Geometry and Grids: Key Considerations in Computational Aerodynamics	448
7.1	Introduction	449
7.2	Surface Shape Development: Lofting Techniques	449
7.3	Computational Grid Overview	454
7.4	Grid or Mesh Types	455
7.5	Structured Grids	463
7.5.1	Topologies	463
7.6	Methods for Creating Structured Grids	468
7.6.1	Algebraic Grid Generation and Stretching/Clustering	472
7.6.2	Conformal Transformation	475
7.6.3	Elliptic Grid Generation	477
7.6.4	Hyperbolic Grid Generation	480
7.7	Unstructured Meshes	481
7.7.1	Cell Types	482
7.8	Methods for Creating Unstructured Meshes	484
7.8.1	Delaunay Triangulation	484
7.8.2	Advancing Front/Advancing Layer	486
7.8.3	Octree	488
7.9	Cartesian Grids	489
7.10	Grid Adaption	493
7.11	Grid Properties that Affect Solution Accuracy	497
7.11.1	Outer Boundary Size	497
7.11.2	Structured Cell Geometry	499
7.11.2.1	Jacobian	499
7.11.2.2	Cell Shape	500
7.11.2.3	Cell Orthogonality at a Surface Boundary	501
7.11.2.4	Cell Stretching	502
7.11.3	Unstructured Cell Geometry	505
7.11.3.1	Flow Alignment and Boundary Layer Gradients	505
7.11.3.2	Cell Planariness	506
7.11.3.3	Cell Skew and Smoothness	508
7.11.3.4	Cell Isotropy and Spacing	510
7.11.4	Viscous Grid Requirements	511
7.12	Grid Sensitivity Studies	513
