<i>Preface</i>	<i>page ix</i>
<b>PART ONE FOUNDATIONS OF NEURONAL DYNAMICS</b>	<b>1</b>
<b>1 Introduction: neurons and mathematics</b>	<b>3</b>
1.1 Elements of neuronal systems	3
1.2 Elements of neuronal dynamics	7
1.3 Integrate-and-fire models	10
1.4 Limitations of the leaky integrate-and-fire model	19
1.5 What can we expect from integrate-and-fire models?	23
1.6 Summary	25
<b>2 Ion channels and the Hodgkin–Huxley model</b>	<b>28</b>
2.1 Equilibrium potential	28
2.2 Hodgkin–Huxley model	31
2.3 The zoo of ion channels	42
2.4 Summary	56
<b>3 Dendrites and synapses</b>	<b>58</b>
3.1 Synapses	58
3.2 Spatial structure: the dendritic tree	64
3.3 Spatial structure: axons	72
3.4 Compartmental models	75
3.5 Summary	79
<b>4 Dimensionality reduction and phase plane analysis</b>	<b>81</b>
4.1 Threshold effects	81
4.2 Reduction to two dimensions	84
4.3 Phase plane analysis	91
4.4 Type I and type II neuron models	96
4.5 Threshold and excitability	103
4.6 Separation of time scales and reduction to one dimension	108
4.7 Summary	111

	<b>PART TWO GENERALIZED INTEGRATE-AND-FIRE NEURONS</b>	115
<b>5</b>	<b>Nonlinear integrate-and-fire models</b>	119
	5.1 Thresholds in a nonlinear integrate-and-fire model	120
	5.2 Exponential integrate-and-fire model	124
	5.3 Quadratic integrate and fire	129
	5.4 Summary	132
<b>6</b>	<b>Adaptation and firing patterns</b>	136
	6.1 Adaptive exponential integrate-and-fire	136
	6.2 Firing patterns	140
	6.3 Biophysical origin of adaptation	149
	6.4 Spike Response Model (SRM)	154
	6.5 Summary	165
<b>7</b>	<b>Variability of spike trains and neural codes</b>	168
	7.1 Spike-train variability	169
	7.2 Mean firing rate	172
	7.3 Interval distribution and coefficient of variation	178
	7.4 Autocorrelation function and noise spectrum	179
	7.5 Renewal statistics	181
	7.6 The problem of neural coding	190
	7.7 Summary	199
<b>8</b>	<b>Noisy input models: barrage of spike arrivals</b>	202
	8.1 Noise input	202
	8.2 Stochastic spike arrival	207
	8.3 Subthreshold vs. superthreshold regime	212
	8.4 Diffusion limit and Fokker–Planck equation (*)	215
	8.5 Summary	221
<b>9</b>	<b>Noisy output: escape rate and soft threshold</b>	224
	9.1 Escape noise	224
	9.2 Likelihood of a spike train	229
	9.3 Renewal approximation of the Spike Response Model	232
	9.4 From noisy inputs to escape noise	235
	9.5 Summary	241
<b>10</b>	<b>Estimating parameters of probabilistic neuron models</b>	243
	10.1 Parameter optimization in linear and nonlinear models	244
	10.2 Statistical formulation of encoding models	249
	10.3 Evaluating goodness-of-fit	255
	10.4 Closed-loop stimulus design	263
	10.5 Summary	264

<i>Contents</i>		vii
<b>11</b>	<b>Encoding and decoding with stochastic neuron models</b>	267
11.1	Encoding models for intracellular recordings	268
11.2	Encoding models in systems neuroscience	273
11.3	Decoding	278
11.4	Summary	285
 <b>PART THREE NETWORKS OF NEURONS AND POPULATION ACTIVITY</b>		 287
<b>12</b>	<b>Neuronal populations</b>	291
12.1	Columnar organization	293
12.2	Identical neurons: a mathematical abstraction	297
12.3	Connectivity schemes	300
12.4	From microscopic to macroscopic	309
12.5	Summary	322
<b>13</b>	<b>Continuity equation and the Fokker–Planck approach</b>	325
13.1	Continuity equation	326
13.2	Stochastic spike arrival	328
13.3	Fokker–Planck equation	332
13.4	Networks of leaky integrate-and-fire neurons	335
13.5	Networks of nonlinear integrate-and-fire neurons	341
13.6	Neuronal adaptation and synaptic conductance	347
13.7	Summary	353
<b>14</b>	<b>Quasi-renewal theory and the integral-equation approach</b>	357
14.1	Population activity equations	358
14.2	Recurrent networks and interacting populations	367
14.3	Linear response to time-dependent input	375
14.4	Density equations vs. integral equations	381
14.5	Adaptation in population equations	386
14.6	Heterogeneity and finite size	390
14.7	Summary	392
<b>15</b>	<b>Fast transients and rate models</b>	395
15.1	How fast are population responses?	397
15.2	Fast transients vs. slow transients in models	399
15.3	Rate models	408
15.4	Summary	414

	<b>PART FOUR DYNAMICS OF COGNITION</b>	417
<b>16</b>	<b>Competing populations and decision making</b>	421
	16.1 Perceptual decision making	422
	16.2 Competition through common inhibition	426
	16.3 Dynamics of decision making	428
	16.4 Alternative decision models	433
	16.5 Human decisions, determinism, and free will	436
	16.6 Summary	439
<b>17</b>	<b>Memory and attractor dynamics</b>	442
	17.1 Associations and memory	442
	17.2 Hopfield model	446
	17.3 Memory networks with spiking neurons	458
	17.4 Summary	464
<b>18</b>	<b>Cortical field models for perception</b>	467
	18.1 Spatial continuum model	468
	18.2 Input-driven regime and sensory cortex models	472
	18.3 Bump attractors and spontaneous pattern formation	484
	18.4 Summary	488
<b>19</b>	<b>Synaptic plasticity and learning</b>	491
	19.1 Hebb rule and experiments	492
	19.2 Models of Hebbian learning	495
	19.3 Unsupervised learning	505
	19.4 Reward-based learning	516
	19.5 Summary	519
<b>20</b>	<b>Outlook: dynamics in plastic networks</b>	524
	20.1 Reservoir computing	524
	20.2 Oscillations: good or bad?	529
	20.3 Helping patients	541
	20.4 Summary	544
	<i>References</i>	547
	<i>Index</i>	573
