Glossary xiii

1 Integrated Automated/Robotic On-site Factories 1
  1.1 Framework for Technical and Efficiency Analysis 2

2 Analysis and Categorization: Construction 8
  2.1 Sky Factory (moving upwards) – Supported by Building 10
     2.1.1 Automated Building Construction System (ABCS) 11
     2.1.2 Akatuki 21 37
     2.1.3 Future Automated Construction Efficient System (FACES) 50
     2.1.4 Mast Climbing Construction System (MCCS) 65
     2.1.5 Roof Push-up Construction Method 74
     2.1.6 Roof-Robo Automated Construction System 84
     2.1.7 Shimizu Manufacturing System by Advanced Robot Technology (SMART) 89
     2.1.8 System Netherlands 111
  2.2 Sky Factory (moving upwards) on Stilts (extending) 119
     2.2.1 Big Canopy 119
     2.2.2 SMART Light 142
  2.3 Sky Factory Pulled Up by Core (main factory and core factory moving upwards) 152
     2.3.1 Totally Mechanized Construction System for High-Rise Buildings (T-Up) 153
     2.3.2 Robotic and Crane-Based Automatic Construction System (RCACS) 164
  2.4 Ground Factory (fixed location, vertically oriented building) and Building Push-up 174
     2.4.1 Automatic Up-Rising Construction by Advanced Technique (AMURAD) 175
2.5 Ground Factory (fixed location, horizontally oriented building) and Building Push-up 193
2.5.1 System Skanska 194
2.5.2 J-Up 199
2.6 Off- and On-site Combined Factory (both in a fixed location) 205
2.6.1 NCC Komplett 205
2.7 Self-Supported Ground Factory (horizontally moving) 213
2.7.1 Bauhelling Summerfield 213
2.7.2 Bauschiff 218
2.8 Sky Factory (moving upwards) for Simple Tower Manufacturing 221
2.8.1 TS-Up 221
2.8.2 Tower-SMART 225
2.9 Centralized Sky Factory (moving upwards) in Combination with Conventional Construction 230
2.9.1 Hybrid Automated Building Construction System (Hybrid ABCS) 231
2.9.2 Hybrid Shimizu Manufacturing System by Advanced Robot Technology (Hybrid-SMART) 239
2.10 Decentralized Sky Factory (moving upwards) in Combination with Conventional Construction 246
2.10.1 An Example of a Decentralized Subsystem Application of Automated Building Construction System (ABCS subsystems) 247
2.10.2 An Example of a Decentralized Subsystem Application of Shimizu Manufacturing System by Advanced Robot Technology (SMART subsystems) 253
3 Analysis and Categorization: Deconstruction .................. 257
3.1 Closed Sky Factory Supported by Building (moving downwards) 259
3.1.1 HAT Down 260
3.1.2 Taisei Ecological Reproduction System (TECOREP) 270
3.2 Open Sky Factory Supported by Building (moving downwards) 277
3.2.1 Move Hat 277
3.2.2 Reverse Construction Method (RCM) 280
3.2.3 Quakeproof, Quiet, Quick and Block-by-Block Building Disassembly (Cube Cut Method) 284
3.3 Ground Factory (fixed place) and Building Lowering 289
3.3.1 Cut and Take Down Method “Daruma Otoshi” (DARUMA) 290
4 Conclusion: Discrepancy between Technical Capability and Efficiency .......................... 299
