<i>Preface</i>	<i>page xv</i>
<i>List of Symbols</i>	<i>xix</i>
<b>1 Poisson and Other Discrete Distributions</b>	<b>1</b>
1.1 The Poisson Distribution	1
1.2 Relationships Between Poisson and Binomial Distributions	3
1.3 The Poisson Limit Theorem	4
1.4 The Negative Binomial Distribution	5
1.5 Exercises	7
<b>2 Point Processes</b>	<b>9</b>
2.1 Fundamentals	9
2.2 Campbell's Formula	12
2.3 Distribution of a Point Process	14
2.4 Point Processes on Metric Spaces	16
2.5 Exercises	18
<b>3 Poisson Processes</b>	<b>19</b>
3.1 Definition of the Poisson Process	19
3.2 Existence of Poisson Processes	20
3.3 Laplace Functional of the Poisson Process	23
3.4 Exercises	24
<b>4 The Mecke Equation and Factorial Measures</b>	<b>26</b>
4.1 The Mecke Equation	26
4.2 Factorial Measures and the Multivariate Mecke Equation	28
4.3 Janossy Measures	32
4.4 Factorial Moment Measures	34
4.5 Exercises	36

x	<i>Contents</i>	
<b>5</b>	<b>Mappings, Markings and Thinnings</b>	38
5.1	Mappings and Restrictions	38
5.2	The Marking Theorem	39
5.3	Thinnings	42
5.4	Exercises	44
<b>6</b>	<b>Characterisations of the Poisson Process</b>	46
6.1	Borel Spaces	46
6.2	Simple Point Processes	49
6.3	Rényi's Theorem	50
6.4	Completely Orthogonal Point Processes	52
6.5	Turning Distributional into Almost Sure Identities	54
6.6	Exercises	56
<b>7</b>	<b>Poisson Processes on the Real Line</b>	58
7.1	The Interval Theorem	58
7.2	Marked Poisson Processes	61
7.3	Record Processes	63
7.4	Polar Representation of Homogeneous Poisson Processes	65
7.5	Exercises	66
<b>8</b>	<b>Stationary Point Processes</b>	69
8.1	Stationarity	69
8.2	The Pair Correlation Function	71
8.3	Local Properties	74
8.4	Ergodicity	75
8.5	A Spatial Ergodic Theorem	77
8.6	Exercises	80
<b>9</b>	<b>The Palm Distribution</b>	82
9.1	Definition and Basic Properties	82
9.2	The Mecke–Slivnyak Theorem	84
9.3	Local Interpretation of Palm Distributions	85
9.4	Voronoi Tessellations and the Inversion Formula	87
9.5	Exercises	89
<b>10</b>	<b>Extra Heads and Balanced Allocations</b>	92
10.1	The Extra Head Problem	92
10.2	The Point-Optimal Gale–Shapley Algorithm	95
10.3	Existence of Balanced Allocations	97
10.4	Allocations with Large Appetite	99
10.5	The Modified Palm Distribution	101
10.6	Exercises	101

*Contents*

xi

<b>11 Stable Allocations</b>	103
11.1 Stability	103
11.2 The Site-Optimal Gale–Shapley Allocation	104
11.3 Optimality of the Gale–Shapley Algorithms	104
11.4 Uniqueness of Stable Allocations	107
11.5 Moment Properties	108
11.6 Exercises	109
<b>12 Poisson Integrals</b>	111
12.1 The Wiener–Itô Integral	111
12.2 Higher Order Wiener–Itô Integrals	114
12.3 Poisson U-Statistics	118
12.4 Poisson Hyperplane Processes	122
12.5 Exercises	124
<b>13 Random Measures and Cox Processes</b>	127
13.1 Random Measures	127
13.2 Cox Processes	129
13.3 The Mecke Equation for Cox Processes	131
13.4 Cox Processes on Metric Spaces	132
13.5 Exercises	133
<b>14 Permenal Processes</b>	136
14.1 Definition and Uniqueness	136
14.2 The Stationary Case	138
14.3 Moments of Gaussian Random Variables	139
14.4 Construction of Permenal Processes	141
14.5 Janossy Measures of Permenal Cox Processes	145
14.6 One-Dimensional Marginals of Permenal Cox Processes	147
14.7 Exercises	151
<b>15 Compound Poisson Processes</b>	153
15.1 Definition and Basic Properties	153
15.2 Moments of Symmetric Compound Poisson Processes	157
15.3 Poisson Representation of Completely Random Measures	158
15.4 Compound Poisson Integrals	161
15.5 Exercises	163
<b>16 The Boolean Model and the Gilbert Graph</b>	166
16.1 Capacity Functional	166
16.2 Volume Fraction and Covering Property	168
16.3 Contact Distribution Functions	170
16.4 The Gilbert Graph	171

xii	<i>Contents</i>	
16.5	The Point Process of Isolated Nodes	176
16.6	Exercises	177
<b>17</b>	<b>The Boolean Model with General Grains</b>	179
17.1	Capacity Functional	179
17.2	Spherical Contact Distribution Function and Covariance	182
17.3	Identifiability of Intensity and Grain Distribution	183
17.4	Exercises	185
<b>18</b>	<b>Fock Space and Chaos Expansion</b>	187
18.1	Difference Operators	187
18.2	Fock Space Representation	189
18.3	The Poincaré Inequality	193
18.4	Chaos Expansion	194
18.5	Exercises	195
<b>19</b>	<b>Perturbation Analysis</b>	197
19.1	A Perturbation Formula	197
19.2	Power Series Representation	200
19.3	Additive Functions of the Boolean Model	203
19.4	Surface Density of the Boolean Model	206
19.5	Mean Euler Characteristic of a Planar Boolean Model	207
19.6	Exercises	208
<b>20</b>	<b>Covariance Identities</b>	211
20.1	Mehler's Formula	211
20.2	Two Covariance Identities	214
20.3	The Harris–FKG Inequality	217
20.4	Exercises	217
<b>21</b>	<b>Normal Approximation</b>	219
21.1	Stein's Method	219
21.2	Normal Approximation via Difference Operators	221
21.3	Normal Approximation of Linear Functionals	225
21.4	Exercises	226
<b>22</b>	<b>Normal Approximation in the Boolean Model</b>	227
22.1	Normal Approximation of the Volume	227
22.2	Normal Approximation of Additive Functionals	230
22.3	Central Limit Theorems	235
22.4	Exercises	237

<i>Contents</i>	xiii
<b><i>Appendix A Some Measure Theory</i></b>	239
A.1 General Measure Theory	239
A.2 Metric Spaces	250
A.3 Hausdorff Measures and Additive Functionals	252
A.4 Measures on the Real Half-Line	257
A.5 Absolutely Continuous Functions	259
<b><i>Appendix B Some Probability Theory</i></b>	261
B.1 Fundamentals	261
B.2 Mean Ergodic Theorem	264
B.3 The Central Limit Theorem and Stein's Equation	266
B.4 Conditional Expectations	268
B.5 Gaussian Random Fields	269
<b><i>Appendix C Historical Notes</i></b>	272
<i>References</i>	281
<i>Index</i>	289
