1 The Goal of One Hundred Knots .......................... 1
   1.1 A Brief Outline of the Key Types of Advanced Marine Vehicles... 2
      1.1.1 Fundamental Types of Hydrofoils ........................... 2
      1.1.2 Fundamental Types of Air Cushion Craft ................. 7
         Amphibious Air Cushion Craft Basic Form .................... 8
         Non-Amphibious Air Cushion Craft Basic Form ............... 10
         Aerodynamic Air Cushion Craft Basic Forms ............... 14
         Category A: Wing-in-Ground Effect ......................... 15
         Category B: Ram Wing .................................. 18
         Category C: PAR Wing-in-Ground-Effect .................. 20
         Category D: Channel Flow Wing-in-Ground-Effect ........ 24
      1.2 Main Marine Vehicles considered by the US Navy for High Speed 25

2 History of High Speed Ship Development .................. 27
   2.1 One Hundred Knots Under What Conditions? ............... 29
   2.2 High Speed at Sea ................................ 31
   2.3 Brief History of Hydrofoils ............................ 34
   2.4 Brief History of Air Cushion Craft ....................... 37
   2.5 Modern Day Developments to Achieve One Hundred Knots ...... 42
   2.6 Early Developments (1916–1930) ......................... 46
      2.6.1 Douglas Warner’s Captured Air Bubble (CAB)............ 46
          Boat (1929) .................................. 46
   2.7 Dr. William R. Bertelsen’s Hovercraft (1958+) .............. 49
   2.8 Sir Christopher Cockerell’s Developments (1955–1999) ....... 50
   2.9 Hovercraft Development Ltd Sidewall Hovercraft (1963+) ...... 52
   2.10 Saunders-Roe Developments (1959–2000) ................ 53
   2.11 US Navy Amphibious Air Cushion Craft Development (1965–today) 56
Contents

2.15 Postscript ........................................ 62

3 The First Surface Effect Ship ........................................ 64
3.1 Basic Theory of Channel Flow ........................................ 65
3.2 The MARAD Surface Effect Ship “Columbia” ...................... 69
3.3 MARAD Test Craft “VRC-I” ........................................ 71
  3.3.1 Bow Flap ........................................ 76
  3.3.2 Center Channel Flap ........................................ 77
  3.3.3 Rear Jet and Jet Flap ........................................ 78
3.4 Stability & Control Jets and Induced Drag Reduction Mechanism ........ 80

4 History of US Maritime Administration “Large Surface Effect Ship” Program ........................................ 86
4.1 Nuclear Ship N. S. Savannah ........................................ 87
4.2 MARAD Hydrofoil Ship Denison Program ........................ 89
4.3 MARAD Aerodynamic Surface Effect Ship (Columbia and VRC-I) Program ........................................ 91
4.4 US Department of Commerce “Surface Effect Ships for Ocean Commerce (SESOC)” Study ...................... 92
  4.4.1 Hydroskimmer ........................................ 94
  4.4.2 Captured Air Bubble (CAB) .................................... 95
  4.4.3 Hydrokeel ........................................ 96
  4.4.4 VRC Channel Flow ........................................ 98
  4.4.5 Weiland Craft ........................................ 100
4.5 Booz-Allen and MARAD Designs for Surface Effect Ships .......... 101
  4.5.1 Booz-Allen Adjustments to Candidate Designs ............ 101
4.6 Conclusions and Recommendations of the SESOC Committee .... 103
  4.6.1 SESOC Conclusions and Recommendations on Channel Flow and CAB Concepts ................................ 103
    Aero-Hydro Dynamics and Control Panel Findings ............ 104
    Speed, Resistance, and Seakeeping Panel Findings ............ 105
    Propulsion Panel Findings .................................... 106
    Hull Panel Findings ........................................ 106
    Operations Panel Findings .................................... 108
4.7 SESOC Committee Conclusions and Recommendations .......... 108
4.8 Ongoing SES Experience While SESOC Committee Was Deliberating ........................................ 109
  4.8.1 Amphibious Air Cushion Craft ................................ 109
  4.8.2 Non-Amphibious Air Cushion Craft ......................... 113
    British Sidewall Hovercraft .................................... 113
    Soviet “Sidewall” Craft ....................................... 115
  4.8.3 Aerodynamic Air Cushion Craft ................................ 116
    Lippisch Wing-in-Ground-Effect Craft .......................... 117
    Soviet Ekranoplan Development .................................. 118
4.9 MARAD Plans Post SESOC ........................................ 119
## Contents

5 History of US Navy “Large High Speed Surface Effect Ship” Program 121
  5.1 MARAD and US Navy Schedules for 100 Knot SES 122
  5.2 Chronological History of 100 Knot SES Program 123
  5.3 Postscript 137
    5.3.1 SESPO’s Designs for Larger SES in 50 knot Class 142
    5.3.2 “US Navy Successfully Meets All Objectives of High Speed SES” 145
  5.4 Summary of the Two Decades of Development 146

6 SES-100A and SES 100B Test Craft and the “THREE THOUSAND TON SES” 149
  6.1 Evolution of Captured Air Bubble (CAB) and Sidehull SES 150
  6.2 Different Key Technologies of the SES-100A and SES-100B 151
  6.3 Sidewall, Sidehull and Sideboard 155
    6.3.1 Sidehull Shaping of SES-100A and SES-100B 158
    6.3.2 Some Additional Comments on Stability 163
    6.3.3 Lateral Stability Rules for Air Cushion Craft 167
  6.4 Seal System Differences 170
    6.4.1 SES-100A Rigid Planer Seal Design 170
    6.4.2 Pitch Stiffness of CAB Planer Seals on SES-100A 173
    6.4.3 Sidehull SES-100B Flexible Seal Design 175
    6.4.4 The Problem of Flagellation 180
  6.5 Structural Design Approach 187
  6.6 Engines and Their Arrangement 189
  6.7 Lift System and Ride Control 190
  6.8 Propulsion System Differences 194
    6.8.1 SES-100A Waterjet Propulsion System 195
    6.8.2 SES-100B Propulsion System 196
  6.9 Comment on the Key Technology Differences between the SES-100A and SES-100B 202
  6.10 Performance of the One Hundred Ton Test Craft 202
    6.10.1 Maximum Speeds of the SES-100A and SES-100B 203
    6.10.2 SES-100B Performance in Rough Water 204
    6.10.3 SES-100B Habitability Envelope 206
    6.10.4 SES-100B Lift Drag Ratio and Transport Efficiency 208
    6.10.5 Comment on Scaling 213
    6.10.6 SES-100B Range 215
    6.10.7 SES-100B Turning Performance 215
    6.10.8 SES-100B Acceleration Performance 217
    6.10.9 SES-100B Deceleration Performance 220
    6.10.10 SES-100B Successfully Meets All Program Objectives 221
  6.11 The Three Thousand Ton Surface Effect Ship 223
    6.11.1 Relationship of 3KSES to SES-100A and SES-100B 223
  6.12 Conclusion of the US Navy High Speed Large SES Program 225
7 Economic Considerations .................................................. 228

7.1 Declining American Marine Industry ................................. 228
7.2 Direct Operating Costs .................................................. 230
7.3 Bréguet Range Equation ................................................ 231
  7.3.1 The Three Bréguet Efficiencies for Economic Transport .... 234
    Propulsion Efficiency ............................................. 235
    Aerodynamic Efficiency and Transport Efficiency ............ 236
    Effective Lift-Drag Ratio ....................................... 237
    Structural Design Efficiency .................................. 238
7.4 What Price Speed? ....................................................... 242
7.5 Transport Efficiency of Vehicles since 1967 ....................... 251
7.6 The Problem Facing the High Speed Ship Designer ............... 253
7.7 Acquisition Cost of High Speed Marine Craft ..................... 255
7.8 Inflation Indices and Cost Trends Over Time ....................... 260
7.9 Weight and Cost Algorithms .......................................... 262
  SWBS Group 100: Structure ......................................... 264
  SWBS Group 200: Propulsion ........................................ 265
  SWBS Group 500: Auxiliary Systems ................................ 267
  Cost Algorithms ...................................................... 268
  Cost of Follow-On Vehicles ........................................ 269
  Detailed Cost Estimating Relationships ............................ 271
  Group 100 Structure Cost Estimating Relationship .............. 271
  Group 200 Propulsion Cost Estimating Relationship .............. 271
  Group 500 Auxiliary System Cost Estimating Relationship .... 272
  Frigate Sized SES Cost Example .................................. 273
7.10 Conclusions of Economic Considerations ........................... 275

8 Technical Considerations ................................................ 277

8.1 Drag of High Speed Air Cushion Craft ............................... 279
  8.1.1 Cushion Induced Wave Drag (D_{wave}) ....................... 280
  8.1.2 Aerodynamic Drag (D_{aero}) .................................. 286
  8.1.3 Momentum Drag (D_{mom}) .................................... 287
    Air Flow in Calm Water ........................................... 288
    Air Flow in Rough Water ......................................... 289
  8.1.4 Skirt or Seal Drag (D_{SK}) .................................... 291
    Calm Water Skirt Drag (D_{SK}) .................................. 291
    Rough Water Skirt Drag .......................................... 292
  8.1.5 Sidehull Drag (D_{SH}) ......................................... 295
    From Sideboard to Sidehull ....................................... 298
    Sidehull Design for Lower Speeds ............................... 301
    Sidehull Shaping for Performance and Stability ............... 304
    Sidehull Lift and Drag .......................................... 308
    Lift and Drag Characteristics of Planing Hulls and Seaplanes 309
    Flat Plate Planing Theory and Test ............................. 310
    Effect of Hull Deadrise on Lift Coefficient .................... 319
    Application of Planing Hull Results to SES Hullforms ....... 321
Contents

Sidehull Skin Friction Drag .................................. 321
Sidehull Wavemaking Drag .................................. 327
8.2 Total Drag Estimation .................................. 328
8.3 Design Speeds for SES .................................. 330
   Speed for Maximum Lift-Drag Ratio (L/D)\textsubscript{max} ....... 331
   Maximum Lift Drag Ratio .................................. 335
8.4 Analysis of the Gabrielli-von Kármán Specific Resistance Curves ..... 336
   Aerodynamic and Hydrodynamic “Barriers” ...................... 338
   Aerodynamic “Barrier” to Transport Efficiency ............... 338
   Hydrodynamic “Barrier” to Transport Efficiency ............ 340
8.5 Comparing Vehicles on Design Speed or Maximum Speed .......... 348
8.6 Assessment of SES-100B Drag Theory and Test .................. 349
   8.6.1 Sea States, Wave Heights and Wave Lengths ............. 350
   8.6.2 Drag of SES-100B in Calm Seas ......................... 352
   8.6.3 Drag of SES-100B in High Sea States .................... 352
   8.6.4 Drag of Sidehulls in Rough Seas ......................... 354
   8.6.5 SES-100B Skirt System Design for Rough Water Operation .................................. 356
8.7 Fan and Cushion System Dynamics .................................. 357
8.8 Dynamic Similitude and Scaling Laws .................................. 363
   Reynold’s Number ........................................... 364
   Froude Number ............................................. 364
   Cavitation Number .......................................... 364
   Cushion Density ............................................. 365
   Pressure Number ............................................. 366
   Flexible Structure Scaling .................................. 367
8.9 Some Statistical Scaling Relationships .......................... 368
   Cushion Length and Cushion Pressure Design Trends .......... 370
   Transport Efficiency Design Trends ........................ 372
8.10 Scaling from SES-100B to Frigate Size SES ...................... 375
   8.10.1 Magnitude of Lift Drag Ratio .......................... 378
   8.10.2 Speed for Maximum Lift-Drag Ratio ....................... 379
   8.10.3 Scaling of Transport Efficiency ......................... 380
8.11 Useful Load, Disposable Load and Empty Weight .................. 382
8.12 Design Efficiencies and Performance Measures .................. 383
8.13 Summary .................................................. 386
9 Navy Military Operations Considerations .......................... 390
9.1 Speed and Amphibious Capability .................................. 392
9.2 Amphibious Warfare: Past, Present and Possible Future ............ 397
9.3 Speed and Stealth ............................................ 399
   9.3.1 Sea Shadow Stealth Ship ................................ 405
   9.3.2 The 100 knot Submarine ................................ 408
   9.3.3 Stealthy Surface Piercing Submarine ....................... 409
9.4 Summary .................................................. 409
# 10 Advanced Naval Vehicles Concepts Evaluation (ANVCE) Project

## 10.1 Types of Vehicles Considered

10.1.1 The ANVCE Point Designs
10.1.2 Common Combat Suites

## 10.2 Point Designs

10.2.1 Surface Vehicle Point Designs
10.2.2 Air Vehicle Point Designs

## 10.3 Summary of Technological Issues to be Resolved

10.3.1 Selected Key Limiting Technologies in SES and Hovercraft

**Structural Weight**

**“Rule of Thumb” on Impact Pressures**

**Structural Weights of ANVCE Point Design Surface Vehicles**

**Lift Systems Technology for Air Cushion Craft**

**Lift Fan Systems**

**Flexible Skirt System State of the Art**

## 10.4 Ride Quality of High Speed Hydrofoils and Air Cushion Craft

10.4.1 Ride Quality Criteria

**Motion Sickness Criteria**

**Work Efficiency Criteria**

10.4.2 Ride Quality of SES-100B

10.4.3 Variable Geometry Hydrofoil

10.4.4 What Price Ride Quality?

## 10.5 Other Novel Forms Evaluated by ANVCE

10.5.1 Supercritical Planing Hull

10.5.2 Double Propeller Transom Configuration

## 10.6 Sidehull or No Sidehull?

## 10.7 ANVCE Project Evaluation of Aerodynamic Air Cushion Craft

10.7.1 The Vagaries of the Sea

10.7.2 German School of WIG Craft Design

10.7.3 Russian School of WIG Craft Design

10.7.4 US Navy Design Philosophy for WIG Design

**WIG (H) Point Design**

**WIG (S) Point Design**

**WIG(O) Point Design**

## 10.8 Empty Weight Trends for Landplanes, Seaplanes and WIGs

## 10.9 Techno-Economic Parameters

10.9.1 Speed for Maximum Range

10.9.2 Maximum Speed and Speed for Maximum Range

10.9.3 Transport Efficiency

## 10.10 Conclusions and Recommendations from ANVCE Final Report

**Surface Effect Ships**

**Air Cushion Vehicles**

**Hydrofoils**

**Supercritical Planing Hulls**

**Wing-in-Ground-Effect Vehicles**

## 10.11 Assessment of the ANVCE Project
